

Figure S4: Whole genome alignment of *P. lilfordi* to *P. muralis*. Chromosomal sequences, named according to corresponding chromosomal sequences in *P. muralis*, are ordered from largest to smallest in *P. lilfordi* and oriented with respect to *P. muralis*, which inverts the order of chromosomes 16 and 17. Alignments longer than 100 kb were selected and visualized with the pafr R library.
