Only parameters with missing data are shown in the table. All other parameters did not contain any missing data on one of the two time points. ^a We had a lot of missing data for WC and blood pressure, as during the corona pandemic WC and blood pressure were not standard care anymore due to social distance. ^b Many patients did not fill in the complete questionnaire and therefore these data were not reliable and these scores were excluded. Abbreviations: WC = waist circumference, CRP = C-reactive protein, SAA = serum amyloid A, TNF- α = tumor necrosis factor alpha, IL-1 β = interleukin-1 β , IL-6 = interleukin-6, PAI-1 = plasminogen activator inhibitor 1, TAP = Tests of Attentional Performance, BDI-II = Beck Depression Inventory-Second Edition.

Repeated measures analyses of variance were conducted to examine changes of time. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Data on both timepoints for the TAP flexibility index score (C) and Compound Z-score (E) were available for 130 participants.

Abbreviations: COWAT = Controlled Oral Word Association Test, TAP = Tests of Attentional Performance.
