

Supplementary Figure S3

A

B

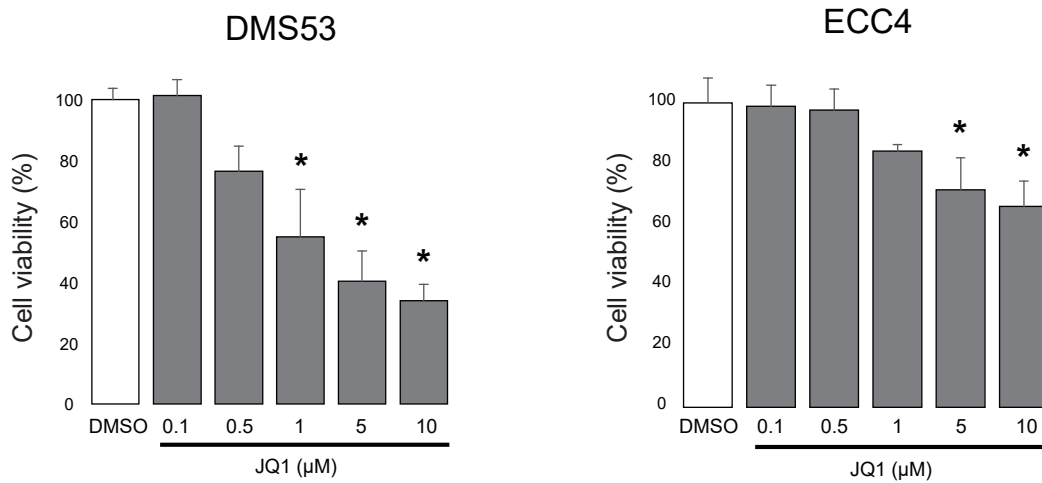

Figure S3. Effects of specific inhibition of super-enhancers mediated by JQ1.

A. Total RNA was collected 72 h after treatment with JQ1 at 0.1, 0.5, 1, 5, and 10 μM in DMS53 and ECC4 cells, and *ASCL1* expression was quantified via quantitative RT-PCR. B. Cell viability was examined 96 h after treatment with JQ1 at 0.1, 0.5, 1, 5, and 10 μM in DMS53 and ECC4 cells. * indicates a P value < 0.05 . Data are expressed as the mean + SEM of three independent experiments.
