

Supplementary Figure S9: Genomic regions marked by increased trimethyl-H3K4 are enriched in *IDH1*-mutant glioma MCTS lines when compared to *IDH1*-wild-type MCTS lines. Individual tornado plots of the trimethyl-H3K4 ChIP-seq signals at sites showing differential enrichment in $IDH1^{WT}$ (n=4) and $IDH1^{R132H}$ (n=5) glioma MCTS lines (see also **Figure 5F**).
