

Description: Strategy for double sorting of degron-Cas-Repressor systems

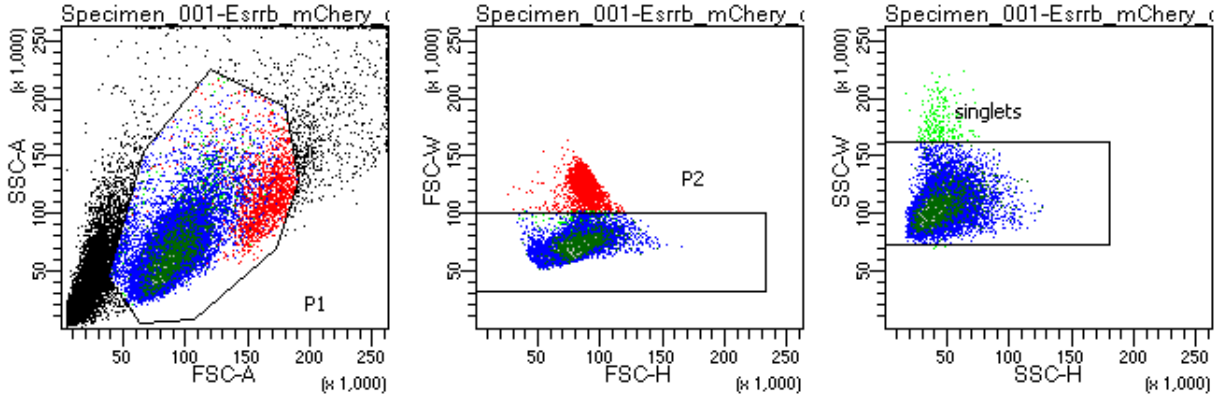

Cells are first sorted gating on BFP levels with a wider gate (BFP+), expanded and then sorted again (M population).

*Page 2: Example of first sorting. Sample: degron-dCas9-KRAB. Population sorted: BFP+

*Page 3: Example of second sorting. Sample: degron-dCas9-KRAB. Population sorted: M and Hi. Population M is used for all the experiments described in the manuscript.

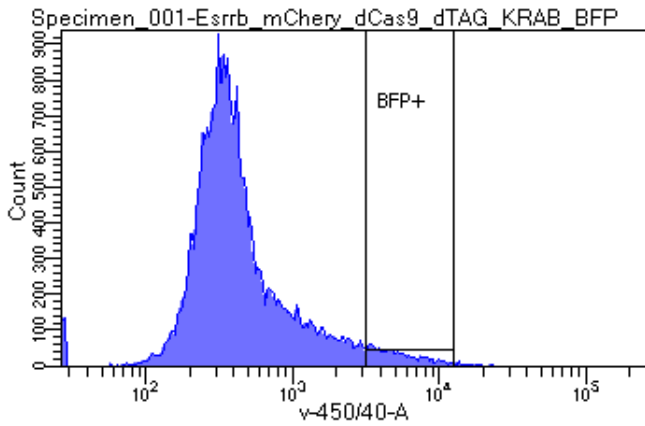

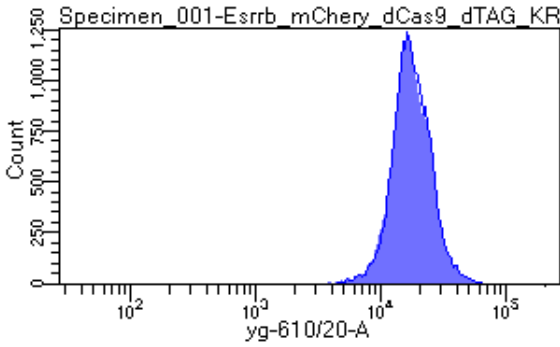

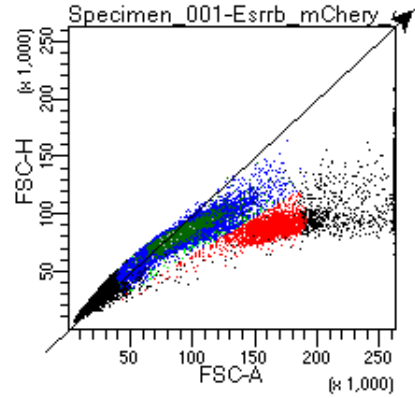

The same gating coordinates are applied to all samples.
