23

24

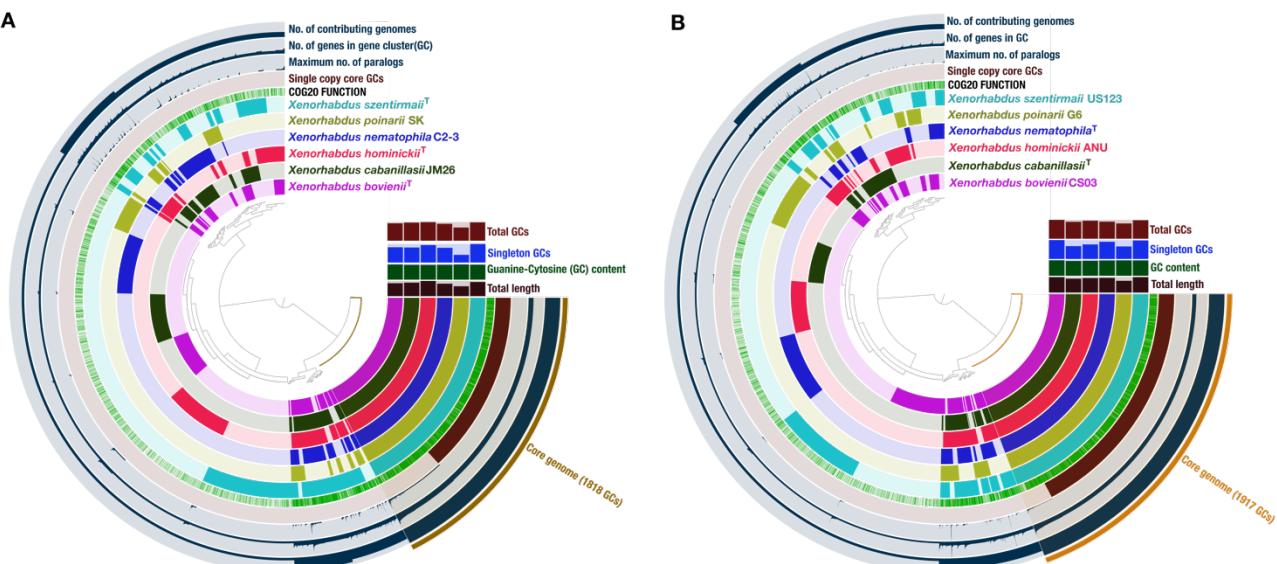

27 **Supplementary Figure S1.** A) Bar chart of known protein functions encoded by single copy genes of the *Xenorhabdus*
 28 sp. BMMCB strain specific gene clusters (GCs). GCs that encoded biosynthesis of specialised metabolites such as non-
 29 ribosomal peptides, polyketides, antibiotics, siderophores, and antibiotic resistance such as efflux pumps, MFS transport-
 30 ers, and beta-lactamases were enriched among those with known protein functions. B) Bar chart of known protein func-
 31 tions encoded by single copy GCs of the *Xenorhabdus griffiniae* specific genome. GCs that encoded biosynthesis of
 32 specialised metabolites were enriched. C) Bar chart of known functions encoded by single copy GCs of the *Xenorhabdus*

33 sp. BMMCB-X. *griffiniae* accessory genome. GCs that encoded the metabolism and transport of carbohydrates such as
34 ribose, galactose, myo-inositol, D-malate, and galactonate were enriched among those with known protein functions.

35
36 **Supplementary Figure S2.** Evolution of the number of gene clusters in the *Xenorhabdus griffiniae* clade. GC denotes
37 total gene clusters present in either an extant or extinct genome. Green and red triangles denote gene gains and losses
38 respectively.

39
40 **Supplementary Figure S3.** Comparison of core genomes from two pangenomes of similar *Xenorhabdus* species created
41 from draft and complete (composed of less than two contigs) genomes. For the pangenome made from A) draft genomes,
42 the number of core, and single copy core GCs were 1818 and 1365 respectively. For the pangenome made from B)
43 complete genomes, the number of core and single copy core gene clusters (GCs) were 1917 and 1728 respectively. Thus,
44 draft genomes underestimated the number of core and single copy core GCs by 5% and 21% respectively.

45 **Supplementary Table S1.** *Steinernema* isolates from locations in Sub-Saharan Africa.

Isolate	Location	Xenorhabdus symbiont	Reference
<i>Steinernema pwanensis</i>	Mwalusembe, Tanzania	No published isolate	Půža <i>et al.</i> , 2017
