

## TABLE OF CONTENTS

### Appendix Figures and Figure legends

Appendix Figure S1. p300 is localized in both the cytosol and nucleus.....2

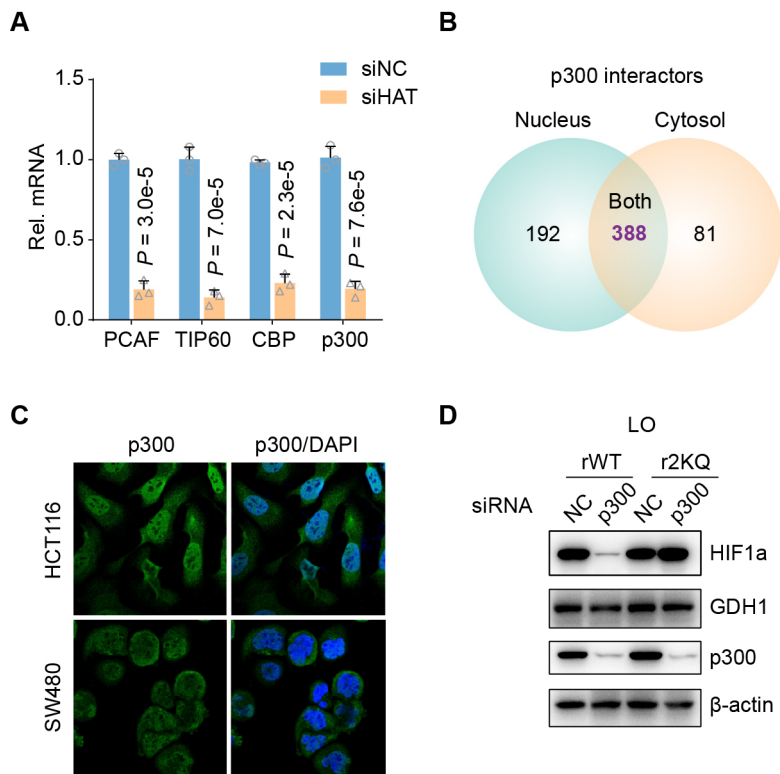

Appendix Figure S2. GDH1 acetylation at both K503 and K527 increased resistance of CRC cell to hypoxia.....3

### Appendix Tables and Table legends

Appendix Table S1. siRNA sequence used in this study. Related to Methods.....5

Appendix Table S2. RT-qPCR primer sequences used in this study. Related to Methods.....17

## Appendix Figures and Figure legends

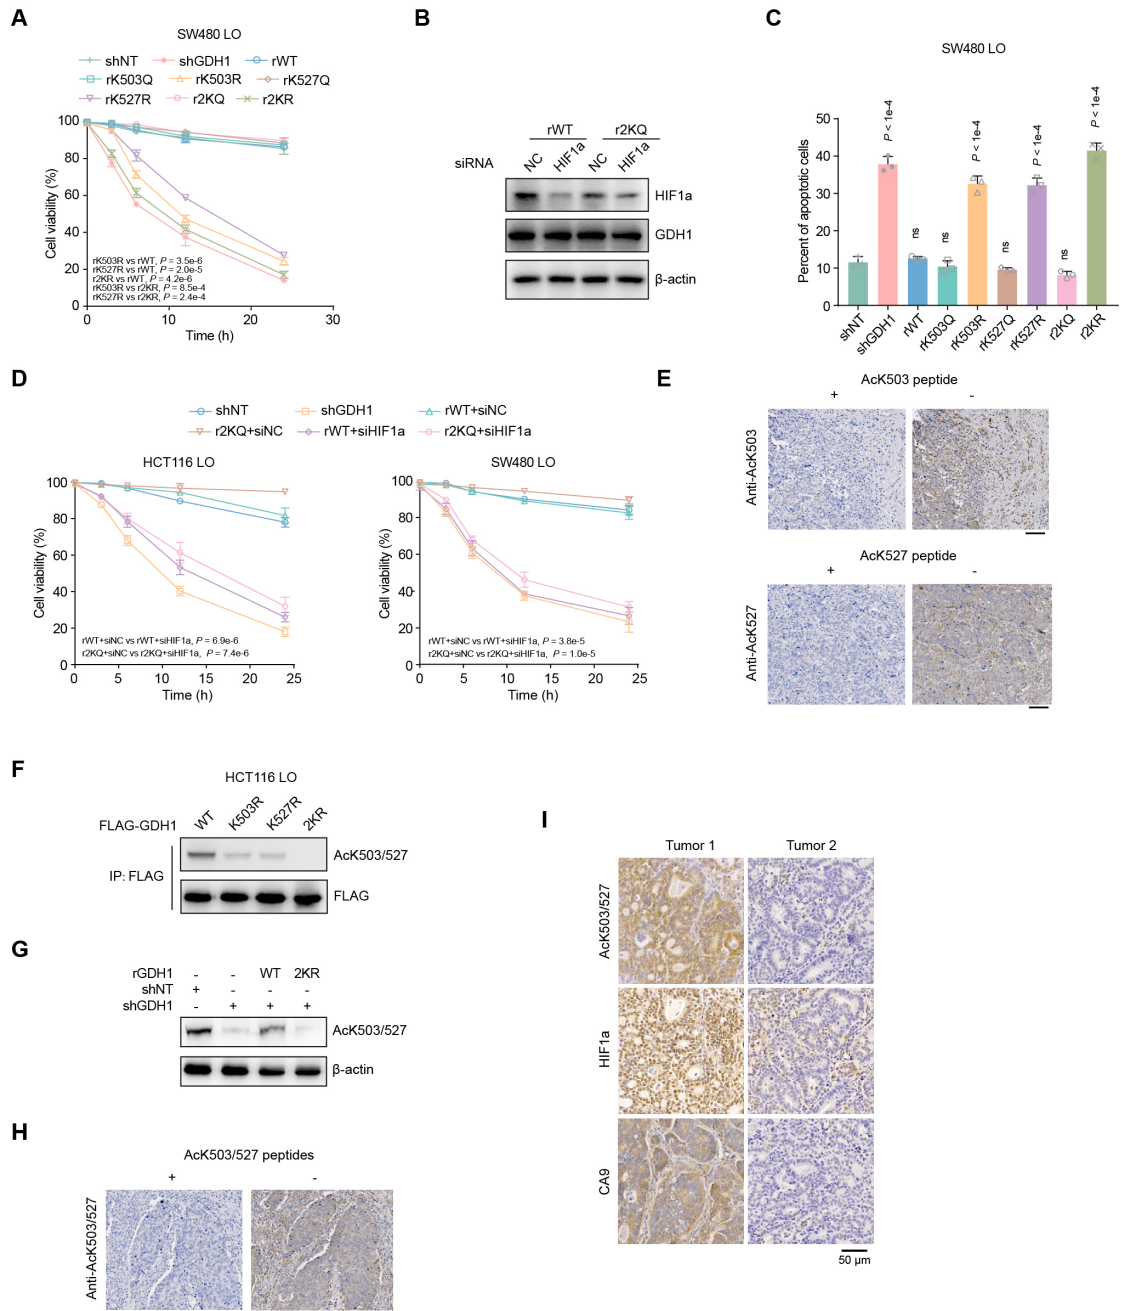

### Appendix Figure S1. p300 is localized in both the cytosol and nucleus.

(A) The knockdown efficiency of siRNA targeting PCAF, TIP60, CBP and p300 in HCT116 cells was analyzed by qRT-PCR. Data represent the mean  $\pm$  SD (unpaired two-tailed student's t-test, n=3).

(B) The cellular localization of the interactors of p300 from Biogrid database.

(C) Immunofluorescence of p300 in HCT116 and SW480 cells was performed to analyze p300 localization. DAPI indicates nuclei location.

(D) Immunoblot of HIF1 $\alpha$  protein level in the NC or siP300 groups when overexpressing WT- or 2KQ-GDH1.

**Appendix Figure S2. GDH1 acetylation at both K503 and K527 increased resistance of CRC cell to hypoxia**

(A) Cell viability percent of indicated cell lines under hypoxia was analyzed by trypan blue and PI/Annexin V double staining, respectively. Mean  $\pm$  SD, two-way ANOVA with Tukey's HSD post hoc test,  $n=3$ .

(B) Immunoblot of HIF1 $\alpha$  protein level in the NC or siHIF1 $\alpha$  groups when overexpressing WT- or 2KQ-GDH1.

(C) Cell apoptotic percent of indicated cell lines under hypoxia was analyzed by trypan blue and

PI/Annexin V double staining, respectively. Mean  $\pm$  SD, one-way ANOVA with Tukey's HSD post hoc test, n=3.

(D) Cell viability of indicated cell lines under hypoxia was analyzed by trypan blue and PI/Annexin V double staining, respectively. Mean  $\pm$  SD, two-way ANOVA with Tukey's HSD post hoc test.

(E) Validation of the specificity of antibodies against AcK503 and AcK507 in IHC. IHC analyses of human CRC tissues were performed with the indicated antibodies in the presence (+) or absence (-) of specific blocking peptides.

(F-G) Western blot analysis of the specificity of antibody against GDH1-AcK503/527.

(H) Validation of the specificity of antibody against AcK503/527 in IHC. IHC analyses of human CRC tissues were performed with the indicated antibodies in the presence (+) or absence (-) of specific blocking peptides.

(I) The representative images were shown after antibodies against GDH1-AcK503/527 and HIF1 $\alpha$  were stained in the tumor tissues from AOM/DSS CRC samples.
