#### A: Treatment Costs

# TIPSS procedure costs

The cost breakdown and total cost associated with TIPSS treatment is detailed in Table S1 below.

TIPSS procedure consumables include antibiotics and general anaesthetic. 1g of Ceftriaxone is administered intravenously for surgical prophylaxis. Unit cost per 100 1 gram vials was €286.70 [1]. 100mg of propofol (general anaesthetic) was applied in the model.

According to expert opinion diagnostic procedure costs are applicable for both elective and non-elective cases. Repeat implantations are associated with 2 bed days in hospital, based on expert opinion. Technical failure of initial TIPSS application is associated with additional procedure time of 2 hours for all relevant HCPs involved.

Table S1: TIPSS procedural costs per person

|  | Units              | Total cost | Source (units; costs) |
|--|--------------------|------------|-----------------------|
| Consumables                            | -1                 | 1          | · · · · · ·           |
| All procedure consumables <sup>a</sup> | 1.00               | €4,019.44  | KOLs; [2]             |
| Diagnostic procedures                  |                    |            |                       |
| Abdomen CT scan                        | 0.80               | €124.00    |                       |
| Doppler ultrasound                     | 1.00               | €67.00     | VOI C. [3]            |
| Echocardiogram                         | 0.50               | €46.00     | KOLS; [3]             |
| Electrocardiogram                      | 1.00               | €150.00    |                       |
| Healthcare professionals time: pre-p   | rocedure (units in | hours)     |                       |
| Hepatologist                           | 0.17               | €4.21      | KOLs; [4]             |
| Radiologist                            | 0.17               | €4.21      |                       |
| Healthcare professionals time: proce   | dure (units in hou | rs)        |                       |
| Radiologist                            | 2.00               | €50.54     |                       |
| Radiologist trainee                    | 2.00               | €23.66     |                       |
| Radiographer                           | 2.00               | €33.84     | KOLs; [4]             |
| Nurse                                  | 4.00               | €96.92     |                       |
| Anaesthetist                           | 2.00               | €50.54     |                       |
| Hospital excess bed days               |                    |            |                       |
| Elective cases                         | 2.00               | €1,176.00  | VOI 0. [2]            |
| Non-elective cases                     | 5.00               | €2,940.00  | KOLs; [3]             |
| Total costs (elective)                 |                    | €5,851.99  |                       |
| Total costs (non-elective)             |                    | €7,615.99  |                       |

<sup>&</sup>lt;sup>a</sup> Consumables include: VIATORR stent, TIPs kit, antibiotics, balloon catheter, X-ray, and propofol.

#### EBL treatment costs (Indication 1 – AVB)

The cost breakdown and total cost associated with EBL treatment is detailed in Table S2 below.

Everyone undergoing EBL was assumed to receive pharmaceutical treatment with either carvedilol or propranolol. Total cost was based on administering pharmaceuticals for 12 months. People on EBL treatment underwent four outpatient EBL sessions, 2 in the first month and 2 and in the second month, following the initial EBL session at first bleeding. People who did not suffer a further bleeding episode also received subsequent management with additional EBL sessions at 6, 12, and 24 months.

Table S2: Costs per person for people receiving endoscopic band ligation plus pharmaceuticals

|                                     | Dose/units  | Total cost         | Source (units; costs) |
|-------------------------------------|-------------|--------------------|-----------------------|
| Pharmaceuticals (total costs per mo | nth)*       |                    |                       |
| Carvedilol                          | 25 mg daily | € 6.56             | KOLs; [1]             |
| Propranolol                         | 40 mg daily | 40 mg daily € 1.23 |                       |
| Endoscopic band ligation            |             |                    |                       |
| Outpatient EBL (follow up)          | 7           | € 4,689.30         | KOLs; [5]             |
|                                     |             |                    |                       |
| Total costs (24-month survival)     | € 4,750.80  |                    |                       |

<sup>\*</sup> Proportion using carvedilol = 25%, propranolol = 75%.

# LVP treatment cost (indication 2 – refractory ascites)

The cost breakdown and total cost associated with LVP treatment is detailed in Table S3 below.

All consumable costs, excluding human albumin, were informed by expert opinion (based on a consultant in the purchasing department of a public hospital group in Catalonia). Human albumin cost per procedure is based on a total dose of 73.6 g, based on expert opinion. The unit cost for a 50 ml solution containing 10g of albumin was €36.90 [1].

People on TIPSS require 1.1 LVP sessions on average in the first month after TIPSS to drain the accumulation of fluid that occurred prior to implantation. This is based on evidence from Bureau et al. (2017) [6], where, for a sample of 29 people who underwent TIPSS, 32 LVPs were required.

Table S3: Large volume paracentesis plus human albumin costs per procedure per person

|                              | Dose/units | Total cost | Source (units; costs) |
|------------------------------|------------|------------|-----------------------|
| Procedure costs              | •          |            |                       |
| Sundries                     | 1.00       | € 193.00   | [3]                   |
| Consumables                  |            |            |                       |
| Catheter and pack            | 1.00       | € 17.55    |                       |
| Connector                    | 1.00       | € 0.30     | KOL; KOL              |
| Drain                        | 1.00       | € 0.75     | KOL; KOL              |
| 2L drainage bag              | 1.00       | € 0.40     |                       |
| Human albumin (unit = dose)  | 73.6 g     | € 271.58   | KOLs; [1]             |
| Nurse (units = hours)        | 2.00       | € 48.46    | KOL; [4]              |
| Hospital stay (units = days) |            |            |                       |
| Day case                     | 1.00       | € 588.00   | KOLs; [3]             |
| _                            |            |            |                       |
| Total costs                  | € 1,1      | 20.04      |                       |

#### **B. Adverse Event Costs**

# Shunt dysfunction

A summary of the costs associated with shunt dysfunction is detailed in the table below.

Shunt dysfunction is applicable for both indications 1 and 2 and required re-intervention. In this population, 72.5% of re-interventions required angioplasty according to expert opinion. For the remaining cases, the method of management was to introduce a balloon expandable stent and, in some cases, a second graft stent (i.e. VIATORR or a bare stent). The proportion who required a second graft stent varied by indication (see table below for details).

Table S4: Total cost per shunt dysfunction, by indication

|  | Unit costs | Percentage<br>receiving<br>procedure | Total costs  | Source<br>[costs; %] |  |  |
|--|------------|--------------------------------------|--------------|----------------------|--|--|
| Angioplasty  | € 2,758.00 | 72.5%                                | € 1,999.55   | [3]; KOLs            |  |  |
| TIPSS reintervention   |            | 27.5%                                |              |                      |  |  |
| Balloon expandable stent                                     | € 4,056.04 | 100%                                 | € 1,115.41** | [7]*; KOLs           |  |  |
| Non-elective TIPSS (Indication 1)                            | € 2,812.00 | 10%                                  | € 77.33**    | GORE: KOLs           |  |  |
| Non-elective TIPSS (Indication 2)                            | € 2,812.00 | 100%                                 | € 773.30**   | GORE: ROLS           |  |  |
|  |            |                                      |              |                      |  |  |
| Total cost shunt dysfunction – indication 1 (AVB) € 3,192.29 |            |                                      |              |                      |  |  |
| Total cost shunt dysfunction -                               | € 3,888.26 |                                      |              |                      |  |  |

<sup>\*</sup> Annual inflation rates calculated using OECD data on healthcare expenditure per capita in Spain which is reported between 2015-2019 [8]. The annual inflation rate for 2020 is assumed to be equal to the mean inflation rate for 2015-2019.

#### Variceal bleeding

The table below outlines the cost associated with recurrent variceal bleeding adverse event for indication 1. For indication 2, the cost of treating recurrent bleeding, as estimated for the TIPSS arm (€4,279), was applied for the TIPSS and LVP treatment arms.

Table S5: Variceal bleeding cost per person (indication 1)

|                        | TIPSS EBL |             | EBL   |             |                          |
|------------------------|-----------|-------------|-------|-------------|--------------------------|
|                        | Units     | Total costs | Units | Total costs | Source<br>[units; costs] |
| Endoscopy              | 1.00      | € 669.90    | 1.00  | € 669.90    | KOL; [5]                 |
| Pharmacotherapy        |           |             |       |             |                          |
| Terlipressin           | 0.075     | € 28.99     | 0.075 | € 28.99     |                          |
| Somatostatin           | 0.700     | € 151.77    | 0.700 | € 151.77    | KOL; [1]                 |
| Octreotide             | 0.225     | € 17.80     | 0.225 | € 17.80     |                          |
| TIPSS (rescue therapy) | NA        | NA          | 0.5   | € 2,141.68* | Table S1                 |
| EBL sessions           | NA        | NA          | 0.14  | € 448.30    | Table S2                 |
| Hospital admission     |           |             |       |             |                          |
| Non-elective days      | 5.10      | € 2,998.80  | 7.97  | € 4,686.36  | [3]                      |

<sup>\*\*</sup> Calculated by multiplying it by 27.5% (i.e. 1 - 72.5%).

| ICU   | 25.0% | € 411.25 | 25.0% | € 411.25 | [3] |
|-------|-------|----------|-------|----------|-----|
| TOTAL | € 4   | ,278.51  | € 8,5 | 56.06    |     |

<sup>\*</sup> Unit costs based on TIPSS stent cost, consumables, and procedure costs.

#### Ascites

The table below details the costs associated with ascites adverse event for indication 1. It was assumed that all ascites episodes are either grade two or three, based on grade 1 ascites being undetectable without an ultrasound. Grade 2 ascites was treated with diuretics with reduced salt intake. Grade three was treated with LVP and diuretics where repeat LVP sessions may be required if unresolved.

Cost of spironolactone is based on fifty 25mg tablets costing €2.50 [1]. Based on expert opinion, 100mg daily dose was applied in the model for 3 months.

Table S6: Ascites adverse event cost per person (indication 1)

|   | Dose/units   | Total costs | Source [units; costs] |  |  |  |
|---|--------------|-------------|-----------------------|--|--|--|
| Grade 2   |              |             |                       |  |  |  |
| Spironolactone  | 100 mg daily | €18.26      | KOLs; [1]             |  |  |  |
| Grade 3   |              |             |                       |  |  |  |
| Spironolactone  | 100 mg daily | €18.26      | KOLs; [1]             |  |  |  |
| LVP   | 1.20         | €1,300.44*  | KOLs                  |  |  |  |
| Procedure   | 1.00         | €193.00     | KOLs; [3]             |  |  |  |
| Consumables   | 1.00         | €290.58     | KOLs; KOLs            |  |  |  |
| Nurse (unit = hours)                                    | 0.50         | €12.12      | KOLs; [4]             |  |  |  |
| Hospital cost (day case)                                | 1.00         | €588.00     | KOLs; [3]             |  |  |  |
|   |              |             |                       |  |  |  |
| Total cost per ascites episode (indication 1) €668.48** |              |             |                       |  |  |  |

<sup>\*</sup> Calculated by taking the product of 1.2 units and sum of parameters making up the LVP procedure.

For indication 2, following drainage of the accumulated fluid post TIPSS implantation, patients treated with TIPSS may still suffer a recurrence of refractory ascites that require a session of LVP. One session of LVP was estimated to cost €1,120 based on 2 hours of nurse time (€48.46), procedure cost, consumables, and hospital day case cost.

#### Hepatic Encephalopathy (HE)

The table below outlines the cost of treating HE. Two forms of HE was considered in the model: mild and severe. However, according to expert opinion, there was no difference in management between the two in the Spanish setting.

<sup>\*\*</sup> Based on an equal weighting of 50% for grade 2 and 3 events.

Table S7: Hepatic encephalopathy average event cost per person

|                            | Dose             | Percentage<br>receiving<br>procedure | Total costs | Source [%; costs] |
|----------------------------|------------------|--------------------------------------|-------------|-------------------|

<sup>&</sup>lt;sup>a</sup> 100 mg of lactulose for oral use cost €2.84 [1].

# Spontaneous Bacterial Peritonitis (SBP)

The cost associated with the management of SBP is outlined in the table below. Cost of albumin was estimated based on a 50ml solution containing 10g of albumin costing €36.90 [3]. Cost of ciprofloxacin was estimated based on a 14 pack tablets costing €3.28 [1]. Cost of cefotaxime was estimated based on a 1g vial costing €3.12 [1].

Table S8: Spontaneous Bacterial Peritonitis adverse event cost per person

|  | Units | Total costs | Source [units; costs] |
|--|-------|-------------|-----------------------|
| IV albumin (87.5 mg)                               | 2.00  | €645.76     | [9]; [1]              |
| Non-elective excess days                           | 3.50  | €2,058.00   | KOLs; [3]             |
| Antibiotics  |       |             |                       |
| Cefotaxime 5-day course<br>(4 g daily for 5 days)* | 0.75  | €8.15       | [9]; [1]              |
| Ciprofloxacin 7-day course (1 g daily for 7 days)  | 0.25  | €0.59       | KOLs; [1]             |
| Total cost of SBP                                  |       | €2,752.50   |                       |

<sup>\*</sup> EASL clinical guidelines SBP (2010) [9]

b 12 pack of 200 mg rifaximin tablets cost €9.21 [1].

<sup>\*</sup> Based on administering treatment for 6 months.

<sup>\*\*</sup> TIPSS re-intervention include consumables, healthcare professionals, 2 bed days (all estimated to be €5,459) & management with balloon stent (estimated to be €1,409).

# **C:** Sensitivity and Scenario Analysis Inputs Probabilistic sensitivity analysis inputs for indications 1 and 2.

|  | TIPSS      | EBL        | Incremental |
|--|------------|------------|-------------|
| Total costs  | € 8,914.00 | € 8,847.00 | € 66.00     |
| Total QALYs  | 1.04       | 0.82       | 0.21        |
| Probabilistic ICER   | € 309.00   |            |             |
| <b>Probability TIPSS is cost</b>                                       | 47%        |            |             |
| Probability TIPSS is cost-effective at a threshold of €25,000 per QALY |            |            | 93%         |

Abbreviations: QALYs – quality adjusted life year; ICER – incremental cost-effectiveness ratio; TIPSS – transjugular intrahepatic porotsystemic stent shunt
