Table S2. Analysis of variance from stepwise selection as well as relative importance (R %) of predictor variables for change in cannabinoid concentration by section (n=226). A total of 27.71% of the variation in change in cannabinoid concentration by section was explained by predictor variables.

Predictor	df	Sum Sq	Mean Sq	F value	Pr(>F)		R (%)
S4strip	1	5.24	5.24	19.52	<0.0001	***	8.07
S3strip	1	11.81	11.81	43.97	<0.0001	***	6.09
S4PropStripped	1	1.14	1.14	4.22	0.0411	*	2.95
Hratio	1	1.7	1.7	6.34	0.0125	*	2.76
S2PropStripped	1	0.96	0.96	3.56	0.0606	.	1.91
logS4striptoS5strip	1	0.53	0.53	1.96	0.1634		1.68
MCDH	1	0.15	0.15	0.56	0.4549		1.47
InitialHeight	1	0.6	0.6	2.25	0.1351		1.39
PropDry	1	0.21	0.21	0.79	0.0125	*	1.39
