

## Supplemental Appendix 1 Terminologies

We further improved the clarifications based on the input from the validation study and updated the clarifications with the latest version of the PFRS. To minimize the errors and clarifications considered to be unacceptable that we had identified in our validation study, we made 219 modifications in the patient-friendly extension, thus resulting in a local extension that included the modifications. We excluded 13 concepts and 22 descriptions from the extension, and excluded 20 diagnoses from the Diagnosethesaurus (DT), accepted 2 descriptions, preferred 23 descriptions, added 20 synonyms and 73 text definitions, and replaced 8 synonyms and 38 text definitions. Additionally, we decided to

provide the same general clarification for all metastases (based on the September 2021 edition), to prevent problems with metastases clarifications. The coverage of clarifications by supertypes had dropped from 86.79 to 83.13% because of the modifications (e.g., excluding the clarification “a type of disease”) and dropped further to 65.99%, because of newly introduced concepts in DT. We used these modified supertype clarifications from the April 2020 DT version and the descriptions from the February 2022 DT version. The coverage of the diagnoses by clarifications was 9.4 times higher with generalization compared with the coverage of diagnoses by clarifications based on descriptions from the PFRS only. See [Table S1](#).

### Supplementary Appendix Table S1 Diagnosethesaurus coverage

Statistic	<i>n</i>	% of DT	% of SCT
Diagnoses	25,199	100.0	
Diagnoses with SNOMED CT id	22,762	90.3	100.0
Diagnoses with clarifications by synonyms and definitions	1,576	6.3	6.9
Diagnoses with clarifications by generalization	13,304	52.8	58.5
Total diagnoses with clarifications	14,880	59.1	65.4

Abbreviations: CT, computed tomography; DT, Diagnosethesaurus; SCT, SNOMED CT.

## Supplementary Appendix 4

Differences in conversion per user characteristic and diagnosis.

**Supplementary Table S2** *p*-Values of the Fisher exact test and adjusted *p*-values after Benjamini–Yekutieli correction for the false discovery rate, testing whether the differences in proportions of users that viewed their problem list and that clicked on an info button are different

Level	Variable	Viewed differences		Clicked differences	
		<i>p</i> -Value	Adjusted <i>p</i>	<i>p</i> -Value	Adjusted <i>p</i>
Patient	Age group	0.0062	0.0560	0.4739	1
	Age subgroup	0.5652	1	0.8596	1
	Gender	0.0002	0.0037	0.7965	1
	User type	0.6249	1	0.2561	1
	Latest diagnosis year	0.0002	0.0037	<0.0001	0.0003
	Number of diagnoses	0.0097	0.0746	0.0468	0.2811
Diagnosis	Diagnosis concept	0.5231	1	0.0051	0.0547
	Medical specialty	0.0431	0.2811	0.0003	0.0037

## Conversion per User Characteristic

**Supplementary Table S3** Logins and problem list views per user characteristic with number of users that logged in “l,” the percentage of total number of patients for whom users logged in (19,961), the number of users that viewed their problem list “v,” with the percentage of users that logged in that viewed their problem list, the odds ratio of viewing the problem list after logging in, with 95% confidence intervals, *p*-value of the Fisher exact test, and \* indicating whether the odds the direction of the odds (+ or -) or whether the category was the reference category (indicated with “ref”)

Characteristic	Category	Logged in		Viewed problem list						
		l	% l	v	% v	OR	(95% CI)	<i>p</i> -Value	*	ref

Total		2,363	36.19	1,291	54.63					

Abbreviation: OR, odds ratio.

Note: The percentages and CIs concern the number of users that viewed info buttons compared with the number that viewed the problem list, the number of users that clicked on an info button compared with the number of users that viewed an info button, and the number of users that provided a rating (answer) compared with the number of users that clicked on an info button. The columns with the asterisks \* show whether the CI is significantly differs from (whether it is lower or higher than) the CI of the total number of info button views, clicks, or answers.

## Conversion per Medical Specialty

**Supplementary Table S5** Logins and problem list views of patients with one or more diagnoses per medical specialty with number of users that logged in or viewed their problem list with percentages and 95% confidence intervals (CIs)
