

Supplementary figure 2: Activation of CAR T cells with plate-bound anti-idiotype antibody.

(A) Representative histogram of α FMC63 antibody staining on non-transduced or α CD19-CAR T cells. (B) IFN- γ and (C) IL-2 production on CAR T cells activated with plate-bound α FMC63 or Raji cells for 24 hours. Pooled data of two independent experiments, $n = 4$ healthy donors per group. Bars are the mean \pm SD. ** $p < 0.01$, *** $p < 0.001$, ns = non-significant by Paired t-test.
