

sFig. 2. Cumulative incidence of SIOP Grade ≥ 2 hearing loss

Time from start of cisplatin therapy to first incidence of SIOP Grade ≥ 2 hearing loss in evaluable patients completing NAC rescue after each dose of cisplatin (Cox multivariable model, $p=0.034$). Two patients in each arm underwent autologous stem cell transplant with post-transplant hearing evaluations (two additional patients were censored prior to transplant without post-transplant hearing evaluations).
