

## Online-Only Supplementary Materials

### 7 tables, 4 figures

**Table S1.** International Classification of Diseases (ICD) codes to identify cardiovascular events

**Table S2.** Baseline characteristics by antihypertensive medication groups in VA nursing home residents (continued)

**Table S3.** Baseline characteristics by systolic blood pressure levels

**Table S4.** Unadjusted incidence rate (per 1,000 person-years) for cardiovascular events and mortality by antihypertensive medication and SBP groups

**Table S5.** Fully adjusted hazard ratios of SBP levels on transition probabilities by multistate modeling

**Table S6.** Sensitivity analyses of hazard ratios of SBP levels for CV events and mortality by antihypertensive medication groups

**Table S7.** Hazard ratios of SBP levels and changes for CV events and mortality by antihypertensive medication groups

**Figure S1.** Flow chart of study population

**Figure S2.** Diagram of multistate model for CV event

**Figure S3.** Random SBP slopes during follow-up period for CV events (left) and mortality (right)

**Figure S4.** Fully adjusted hazard ratios of SBP levels for CV events and mortality by antihypertensive medication groups

**Table S1. International Classification of Diseases (ICD) codes to identify cardiovascular events**

	<b>ICD-9</b>	<b>ICD-10</b>
Myocardial infarction	410.x	I21.x, I22.x
Stroke	430, 431, 433, 434, 436	I60, I61, I63, I64
Heart failure exacerbation	428.x	I50.x

**Table S2. Baseline characteristics by antihypertensive medication groups in VA nursing home residents (continued)**

	No medication (n=8,718)	1-2 medication (n=20,544)	≥3 medication (n=7,372)	P-value

SBP changes	Decreasing	ref	ref
	Stable/increasing	0.94 (0.85,1.05)	0.75 (0.70,0.80) **

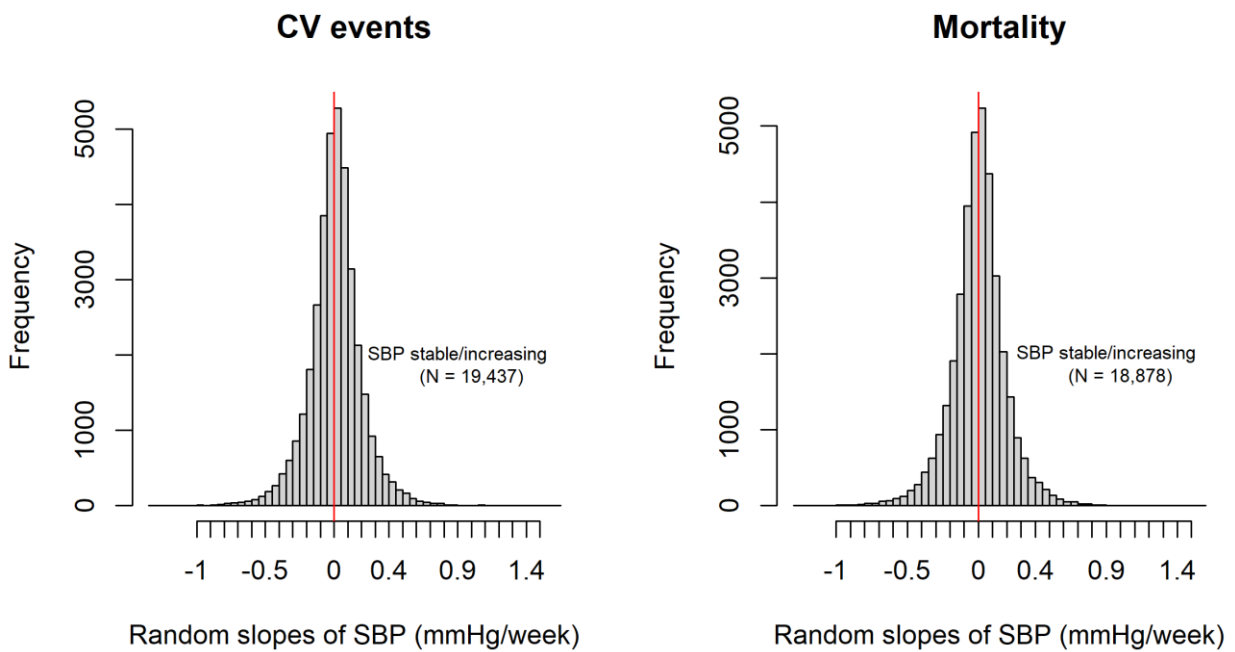

**Notes:** Data are hazard ratios (95% confidence intervals). SBP, systolic blood pressure. SBP levels were 4 categories with reference group of SBP 130~149mmHg. SBP changes were stable/increasing trajectory (random SBP slope  $\geq 0$  mmHg/week) versus decreasing trajectory (reference, random SBP slope  $< 0$  mmHg/week). Models adjusted for age, sex, race, height, weight, smoking status, cardiovascular disease, heart failure, and activities of daily living (model 1). \* P value $<.05$  \*\* P value  $<.001$

**Figure S1. Flow chart of study population**

**Figure S2. Diagram of multistate model for CV event**

**Figure S3. Random SBP slopes during follow-up period for CV events (left) and mortality (right).** SBP, systolic blood pressure. Slopes were estimated using linear mixed effect modeling. Cut-off value was marked as red vertical line and a slope  $\geq 0$  mmHg/week was defined as a SBP stable/increasing trajectory.

**Figure S4. Fully adjusted hazard ratios of SBP levels for CV events and mortality by antihypertensive medication groups.** SBP, systolic blood pressure. Blood pressure is in units of mmHg. Reference group was SBP of 130~149mmHg. Models adjusted for age, sex, race, height, weight, smoking status, cardiovascular disease, heart failure, activities of daily living, Cognitive Function Scale, statins, glucose lowering drugs, diabetes, osteoarthritis, COPD, kidney disease, metastatic cancer, and dementia (model 2). \* P value<.05 \*\* P value <.001
