Abbreviations: AE, adverse event; CB, clinical benefit; CBR, clinical benefit rate; CI, confidence interval; CR, complete response; DCR, disease control rate; DOR, duration of response; DOT, duration of treatment; NA, not applicable; NE, not evaluable; ORR, overall response rate; OS, overall survival; PFS, progression-free survival; PD, progressive disease; PR, partial response; SD, stable disease; TF, treatment failure; TTR, time to response.

Time to event parameters were estimated using Kaplan-Meier method.

^aBased on investigator assessment.

^bCalculated based on response evaluable set within the monotherapy or combination therapy cohort.

^cCBR is defined as achieving confirmed CR, PR or SD of at least 24 weeks (CBR-24) or 16 weeks (CBR-16) from cycle 1 day 1.

^dAnalyzed for responders only.

^eDefined as discontinuation due to AEs, progressive disease, and death.
