

Figure S1. Related to figure 1. **(a)** Representative flow cytometry sorting scheme for isolating neuro-immune cells from human postmortem brain tissue from a frontal lobe sample. **(b)** Boxplots of raw gene counts for all genes in the SARS-CoV-2 (NC045512.2) genome from human neuro-immune cell scRNA-seq. Zero counts are detected for all genes. **(c)** Boxplots of raw gene counts for all genes in the EBV1 genome (NC007605.1) from human neuro-immune cell scRNA-seq. Zero counts are detected for all genes.

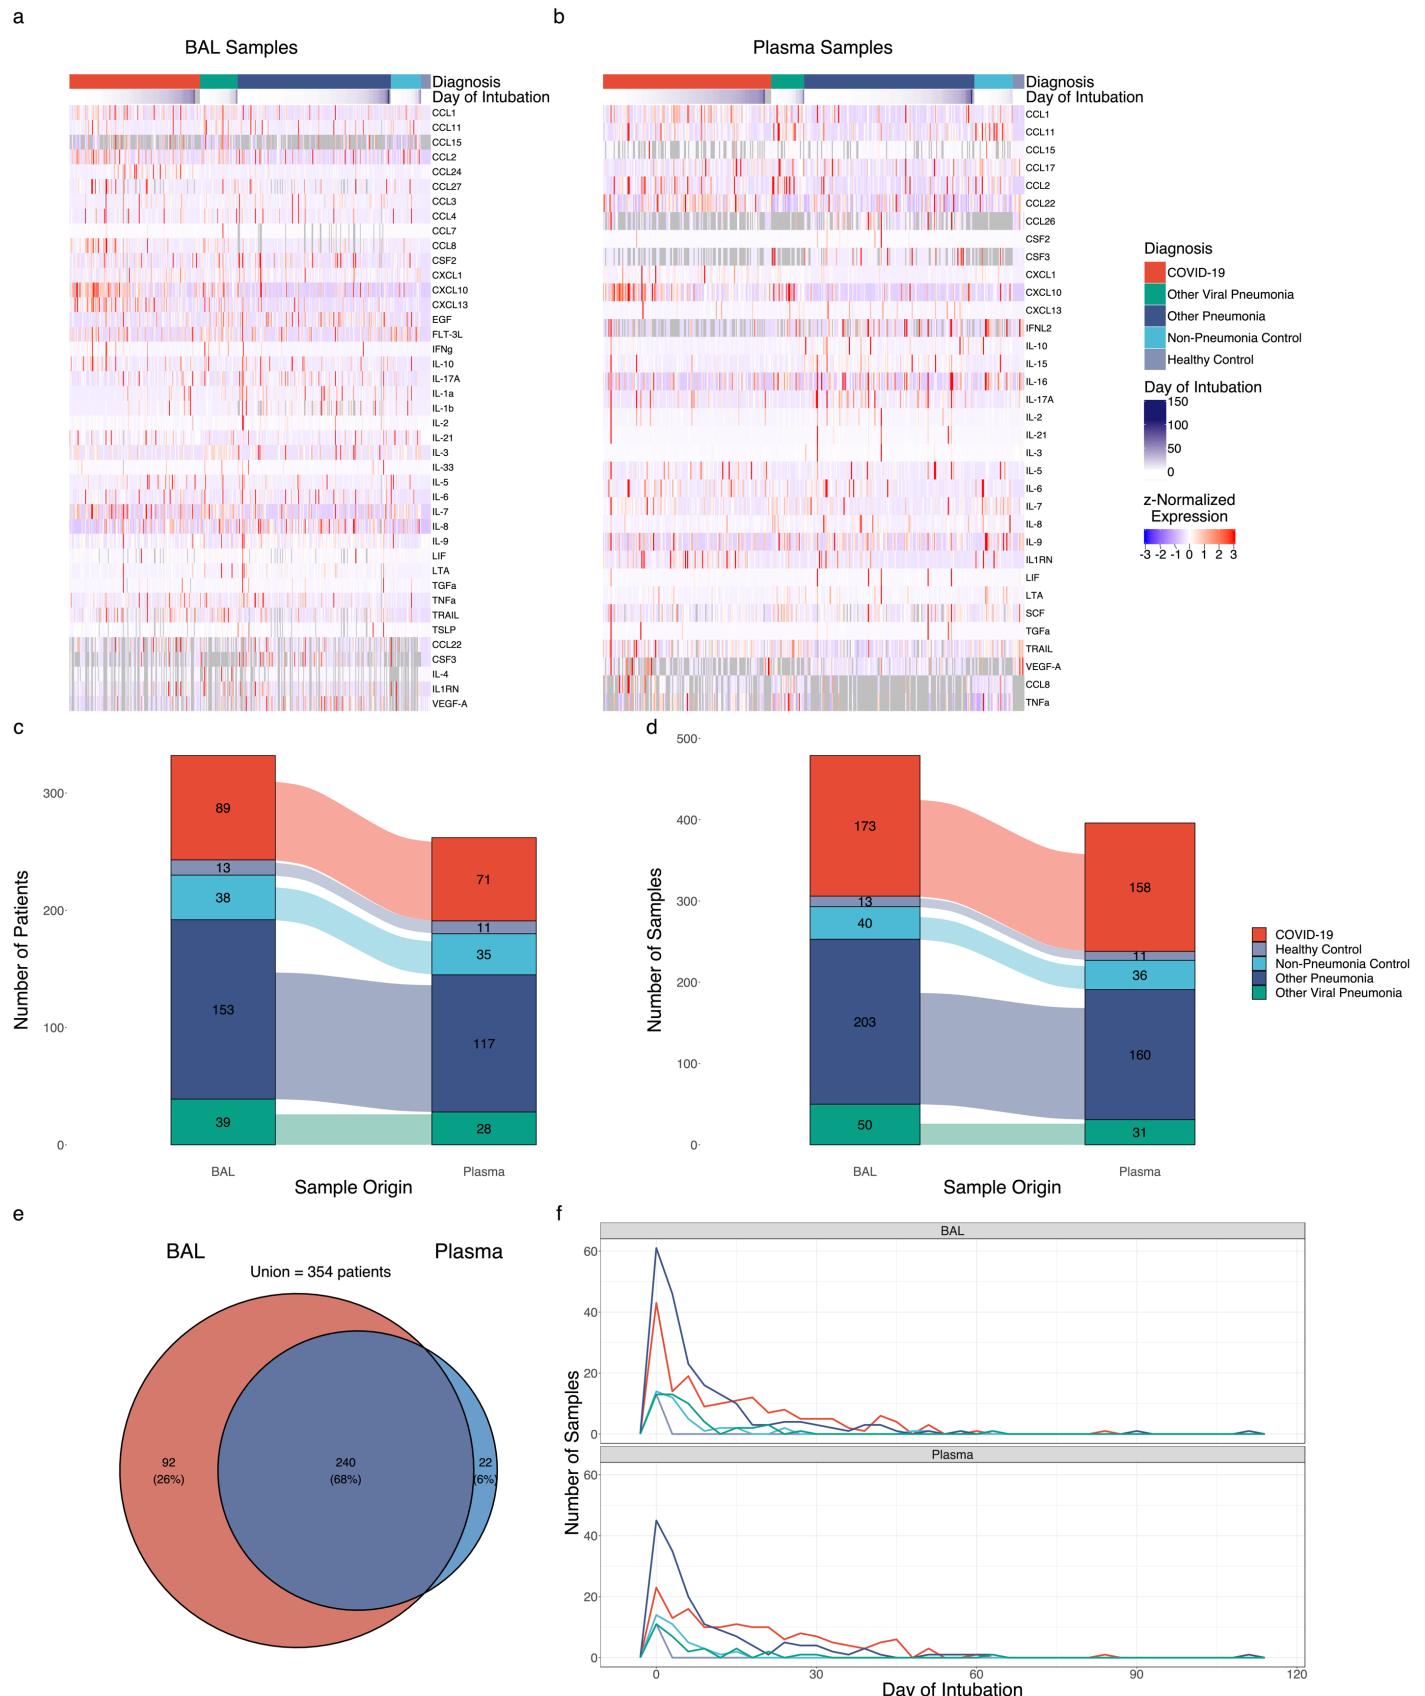

Figure S2. Related to figure 2. **(a)** Heatmap of 41 cytokines showing significant variability by diagnosis ($q < 0.05$, Kruskal-Wallis) from 479 BAL samples collected throughout the entire ICU stay from 332 patients. **(b)**

Heatmap of 31 cytokines showing significant variability by diagnosis ($q < 0.05$, Kruskal–Wallis) from 396 plasma samples collected throughout the entire ICU stay from 262 patients. **(c,d)** Alluvial plot of total numbers of patients included in the BAL fluid (c) and plasma (d) datasets. **(e)** Venn diagram of patients with BAL and plasma samples. **(f)** Frequency polygon plot of BAL and plasma sampling distributions throughout patient stay by group.

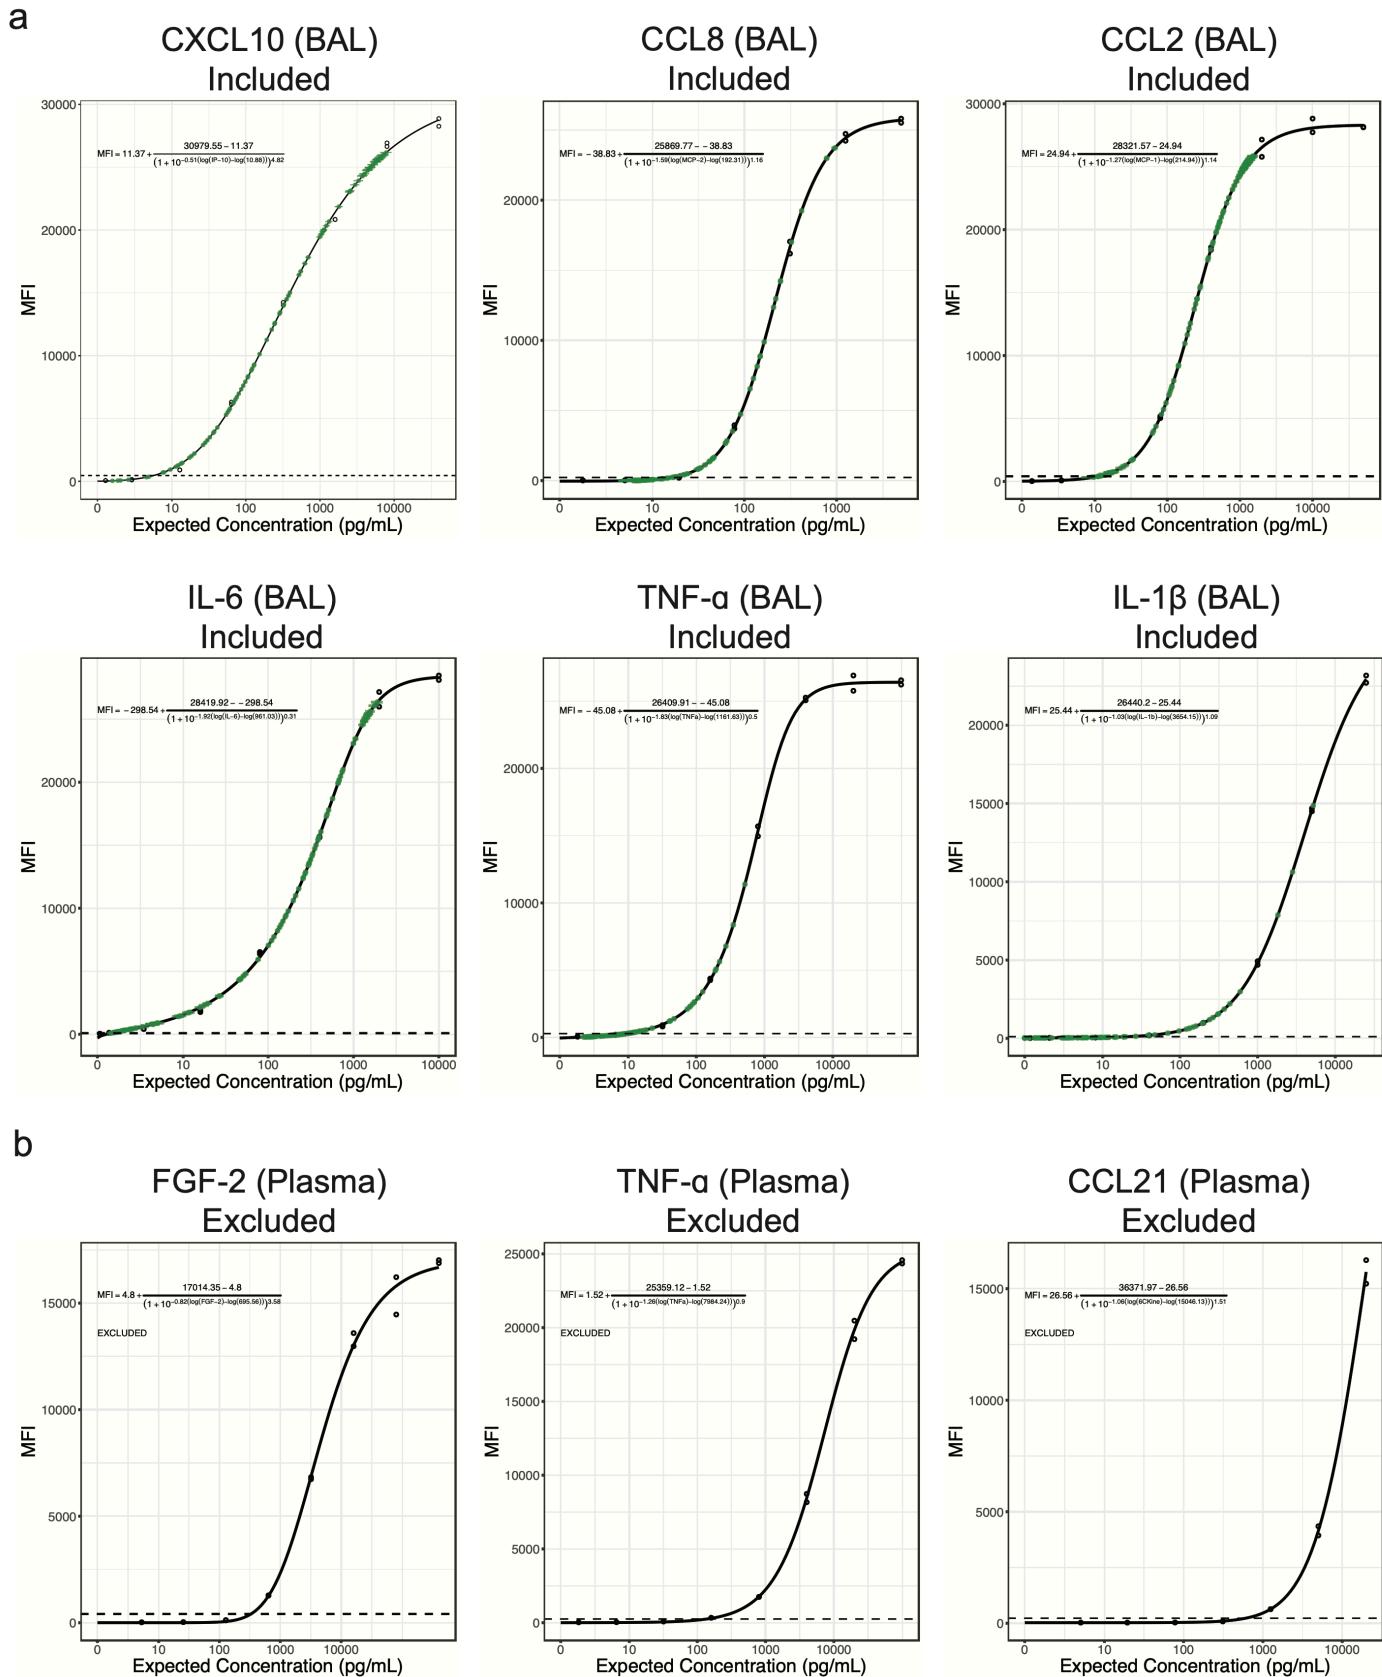

Figure S3. Representative standard curve fitting plots for cytokine data exclusion. (a) Representative standard curves and fitted cytokine expression values for analytes included in this study. From left to right, top to bottom: CXCL10 (IP-10), CCL8 (MCP-2), CCL2 (MCP-1) IL-6, TNF- α , IL-1 β . (b) Representative standard

curves for analytes excluded for poor sensitivity in this study. From left to right: FGF-2, TNF- α , and CCL21. For all plots, empty points represent standards of known concentration used for curve-fitting. Black curves and associated formulae represent the function fitted to these points. Green points represent experimental values, and green whiskers are the standard error of prediction. Dotted lines are the upper limit of the 95% confidence interval of lower asymptote prediction.

Supplemental Data File 1. Pseudobulk DESeq2 differential expression analysis results from human microglia scRNA-seq in COVID-19 vs. controls.

Supplemental Data File 2. Complete pairwise comparisons between diagnosis groups for all relevant cytokine cohort metadata (see Table 2).

Supplemental Data File 3. Complete comparisons between patients with early BALs and the entire cohort for all relevant cytokine cohort metadata.

Supplemental Data File 4. List of the complete NU SCRIPT investigators.
