

### Supplemental Digital Content 5: Distribution of recipient age

**Figure legend:** Overview of the relative percentage per 10-year age category depending on donor age ( $<$  70 years vs.  $\geq$  70 years) for all patients who underwent lung transplantation at the University Hospitals Leuven between January 1<sup>st</sup>, 2010 and December 31<sup>st</sup>, 2020. In this experience, lungs from older donors are more frequently assigned to older recipients (old-for-old strategy).
