

Table S1: Characteristics of Excluded Studies

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
Maslov [79]	<ul style="list-style-type: none"> Logical description Economic benefits 	<ul style="list-style-type: none"> Non 	<ul style="list-style-type: none"> Random mass testing 	<ul style="list-style-type: none"> No comparator
Peto et al [80]	<ul style="list-style-type: none"> Modeling study Reproduction number Number of daily tests 	<ul style="list-style-type: none"> Hypothetical sample in the UK 	<ul style="list-style-type: none"> Weekly mass test and trace using isothermal single-step reverse transcription-polymerase chain reaction (RT-PCR) 	<ul style="list-style-type: none"> No comparator
Domenico et al [81]	<ul style="list-style-type: none"> Modeling study Lockdown impact Number of contacts 	<ul style="list-style-type: none"> Age profile data of Ile-de- France and 2012 social contact matrix 	<ul style="list-style-type: none"> School closure Employee telework from home Senior isolation (high-risk group) Lockdown and non-essential activity ban Case isolation with large-scale testing 	<ul style="list-style-type: none"> Unsuitable comparator
Quilty et al [82]	<ul style="list-style-type: none"> Modeling study Infected travelers 	<ul style="list-style-type: none"> Air travelers 	<ul style="list-style-type: none"> Symptoms screening 	<ul style="list-style-type: none"> Unsuitable design
Gostic et al [83]	<ul style="list-style-type: none"> Modeling study Screening outcome and missed cases 	<ul style="list-style-type: none"> A hypothetical population of infected travelers 	<ul style="list-style-type: none"> Symptomatic but not aware of exposure risk Aware of exposure risk but without detectable symptoms Symptomatic and aware that exposure may have occurred Neither symptomatic nor aware of exposure risk 	<ul style="list-style-type: none"> Lack of intervention

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
Kucharski et al [84]	<ul style="list-style-type: none"> Modeling study Reduction in transmission Daily contacts quarantined 	<ul style="list-style-type: none"> 40,162 participants and BBC 2017-18 social contact dataset in the UK 	<ul style="list-style-type: none"> No control measures. Self-isolation of symptomatic cases Household quarantine Quarantine of work or school contacts Manual tracing of acquaintances Manual tracing of all contacts App-based tracing Mass testing Daily limit of other setting contacts 	<ul style="list-style-type: none"> Unsuitable design. No comparison
Kirshblum et al [85]	<ul style="list-style-type: none"> Retrospective study Test results and symptoms onset 	<ul style="list-style-type: none"> 103 admitted patients in the Rehabilitation hospital in the USA 	<ul style="list-style-type: none"> Analysis of samples collected at the time of admission 	<ul style="list-style-type: none"> Unsuitable design
Firth et al [86]	<ul style="list-style-type: none"> Modeling study Number of tests Number of contacts 	<ul style="list-style-type: none"> 468 real-world social network data in the UK 	<ul style="list-style-type: none"> Outbreak progress under no intervention Outbreak progress under case isolation Outbreak progress under primary contact tracing Outbreak progress under secondary contact tracing 	<ul style="list-style-type: none"> Contact tracing limited to symptom-based testing
Keeling et al [87]	<ul style="list-style-type: none"> Cross-sectional survey Tracing efficacy 	<ul style="list-style-type: none"> More than 5802 subjects reporting more 	<ul style="list-style-type: none"> N/A 	<ul style="list-style-type: none"> Contact tracing limited to

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
	<ul style="list-style-type: none"> Distribution of secondary cases 	<p>than 50,000 contacts in the UK</p>		<p>symptom-based testing</p>
Bilinski et al [88]	<ul style="list-style-type: none"> Modeling study % reduction in reproduction number (R) 	<ul style="list-style-type: none"> Hypothetical in the US 	<ul style="list-style-type: none"> Symptom testing with 30% isolation and quarantine. Test all individuals, with 30% isolation and quarantine. Symptom testing with 60% isolation and quarantine. Test all individuals, with 60% isolation and quarantine. Symptom testing, with 90% isolation and quarantine Test all individuals, with 90% isolation and quarantine 	<ul style="list-style-type: none"> Contact tracing limited to symptom-based testing
Kretzschmar et al [89]	<ul style="list-style-type: none"> Modeling study Reduction in the reproduction number 	<ul style="list-style-type: none"> Hypothetical sample in the Netherlands 	<ul style="list-style-type: none"> Conventional contact tracing Mobile app contact tracing Physical distancing strategy Testing and isolation of cases without tracing contacts 	<ul style="list-style-type: none"> Contact tracing limited to symptom-based testing
Skoll et al [90]	<ul style="list-style-type: none"> Non-systematic review Role of technology, barriers, and scale-up strategies 	<ul style="list-style-type: none"> N/A 	<ul style="list-style-type: none"> Digital contact tracing and mass testing 	<ul style="list-style-type: none"> Unsuitable design
Kerr et al [91]	<ul style="list-style-type: none"> Modeling study Feasibility of control strategies 	<ul style="list-style-type: none"> Demographic, mobility, and epidemiological 	<ul style="list-style-type: none"> Test and trace (testing, contact tracing, and quarantine) 	<ul style="list-style-type: none"> Limited to control

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
		data of Seattle in the USA		
Panovska-Griffiths et al [92]	<ul style="list-style-type: none"> Modeling study Reduction in the reproduction number 	<ul style="list-style-type: none"> Modeled sample in the UK 	<ul style="list-style-type: none"> Full-time schooling Part-time weekly rota system of 50% each schooling 68% contact tracing with no scale-up in testing 68% contact tracing with sufficient testing 40% contact tracing with sufficient testing 	<ul style="list-style-type: none"> No suitable comparison
Hellewell et al [93]	<ul style="list-style-type: none"> Modeling study Onward transmission 	<ul style="list-style-type: none"> Modeled sample in the UK 	<ul style="list-style-type: none"> 5, 20, and 40 initial cases of the outbreak 0, 0.2, 0.4, 0.6, 0.8 and 1 probabilities of tracing a contact Short symptom onset to isolation Long symptom onset to isolation 	<ul style="list-style-type: none"> Contact tracing limited to symptom-based testing
Ferretti et al [94]	<ul style="list-style-type: none"> Modeling study Basic reproduction number (R) Generation time 	<ul style="list-style-type: none"> Pair of 40 hypothetical recipients in Singapore 	<ul style="list-style-type: none"> Symptomatic transmission Presymptomatic transmission Asymptomatic transmission Environmental transmission Isolating symptomatic persons Tracing the contacts of symptomatic cases and quarantining 	<ul style="list-style-type: none"> Contact tracing limited to symptom-based testing
Min et al [95]	<ul style="list-style-type: none"> Modeling study Epidemic size 	<ul style="list-style-type: none"> Daily COVID-19 reported cases (Feb12- 	<ul style="list-style-type: none"> Social distancing among adults Spring semester postponement 	<ul style="list-style-type: none"> No suitable comparator

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
	<ul style="list-style-type: none"> Effective contact rate 	March3) in Korea	<ul style="list-style-type: none"> Intensive contact tracing Large-scale diagnostic testing 	
He et al [96]	<ul style="list-style-type: none"> Modeling study Required resources Effect on R 	<ul style="list-style-type: none"> 40,162 BBC pandemic data in the UK 	<ul style="list-style-type: none"> Symptom-based contact tracing Test-based contact tracing Testing of asymptomatic contacts 	<ul style="list-style-type: none"> Contact tracing limited to symptom-based testing
Goscé et al [97]	<ul style="list-style-type: none"> Modeling study 	<ul style="list-style-type: none"> PHE^a, NHS^b, and TfL^c data Royal Borough of Kensington and Chelsea (RBKC) in the UK 	<ul style="list-style-type: none"> Isolation of RBKC residents from the rest of the city Removal of lockdown Weekly testing (business reopens but people work from home) Shielding 60+ age group with the lifting of lockdown Combined universal testing and use of face coverings with no lockdown. - Universal testing, contact tracing and isolation, lockdown 	<ul style="list-style-type: none"> Unsuitable design
Li et al [98]	<ul style="list-style-type: none"> Descriptive study 	<ul style="list-style-type: none"> N/A 	<ul style="list-style-type: none"> Containment Suppression 	<ul style="list-style-type: none"> Unsuitable design
Kennedy-Shaffer et al [99]	<ul style="list-style-type: none"> Modeling study Reduction in transmissions 	<ul style="list-style-type: none"> Unknown 	<ul style="list-style-type: none"> Hypothetical rapid test Transmission tracing Full isolation of all contacts of cases Isolate contacts with positive test results 	<ul style="list-style-type: none"> Unsuitable design
Campbell et al [100]	<ul style="list-style-type: none"> Cross sectional 	<ul style="list-style-type: none"> 41,751 	<ul style="list-style-type: none"> Systematic trace and test contacts 	<ul style="list-style-type: none"> No suitable comparator

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
	<ul style="list-style-type: none"> • Cost, human resource and lab capacity 	<ul style="list-style-type: none"> • COVID-19 contacts, the staff of hospitals, health centers, care homes & essential businesses, school children & staff in Canada 	<ul style="list-style-type: none"> • Test all staff in acute care hospitals. • Test all community health workers and staff/residents of long-term care homes • Test all major public and interpersonal contact essential workers • Test all children and staff of schools 	
Cleevely et al [101]	<ul style="list-style-type: none"> • Modeling study 	<ul style="list-style-type: none"> • Hypothetical sample in the UK 	<ul style="list-style-type: none"> • Stratified periodic sample testing • Universal random testing 	<ul style="list-style-type: none"> • Unsuitable comparator
Yokota et al [102]	<ul style="list-style-type: none"> • Diagnostic tests • The utility of nucleic acid amplification 	<ul style="list-style-type: none"> • 1924 asymptomatic persons in Japan 	<ul style="list-style-type: none"> • Nasopharyngeal swap-based (NPS) RT-PCR test • Saliva-based PCR test 	<ul style="list-style-type: none"> • Unsuitable design
Eilersen & Sneppen [103]	<ul style="list-style-type: none"> • Modeling study • Quarantine measures • Cost-effectiveness 	<ul style="list-style-type: none"> • Hypothetical sample 	<ul style="list-style-type: none"> • No intervention • Reduced work contacts by 75% • Reduced social contacts by 75% • Infection probability reduced by 50% • Workplace size reduced by half • Infection probability plus workplace size reduced 	<ul style="list-style-type: none"> • Limited to control
Altawalah et al [104]	<ul style="list-style-type: none"> • Cross-sectional study • Detection of SARS-CoV-2 in saliva 	<ul style="list-style-type: none"> • 891 suspects in Kuwait 	<ul style="list-style-type: none"> • Nasopharyngeal swap-based (NPS) RT-PCR test • Saliva-based PCR test 	<ul style="list-style-type: none"> • Unsuitable design

Study	Design/ Outcome	Sample/ setting	Strategies	Reason for exclusion
Dollard et al [105]	<ul style="list-style-type: none"> Diagnostic test COVID-19 infections 	<ul style="list-style-type: none"> 298 air travelers in the USA 	<ul style="list-style-type: none"> Reverse transcription-polymerase chain reaction (RT-PCR) 	<ul style="list-style-type: none"> Asymptomatic proportions unknown
Telford et al [106]	<ul style="list-style-type: none"> Cross-sectional Timing of mass testing 	<ul style="list-style-type: none"> 5671 residents & staff in 28 long term care facilities in the USA 	<ul style="list-style-type: none"> Mass RT-PCR test 	<ul style="list-style-type: none"> Asymptomatic proportion unknown
Bosetti et al [107]	<ul style="list-style-type: none"> Modeling study Impact of intervention 	<ul style="list-style-type: none"> Real-time COVID-19 data in France 	<ul style="list-style-type: none"> Mass testing 	<ul style="list-style-type: none"> No comparator
