

Figure S2. Patient-derived organoid cultures retain Estrogen Receptor (ER) expression during long-term culture. A) ER immunohistochemistry of matching PDOs and patient tumors. B) ER immunohistochemistry of patient #8, #10 and #26 PDOs at passage 20 C) Representative confocal images of patient #10 and #26 PDOs stained for ER (green) and nuclei (DAPI: blue) at passage 5 and passage 15 or 20. Scale bars: 50 μ m (A, B), 40 μ m (C).
