

Supplemental information for “Molecular correlates of vaccine-induced protection against typhoid fever”

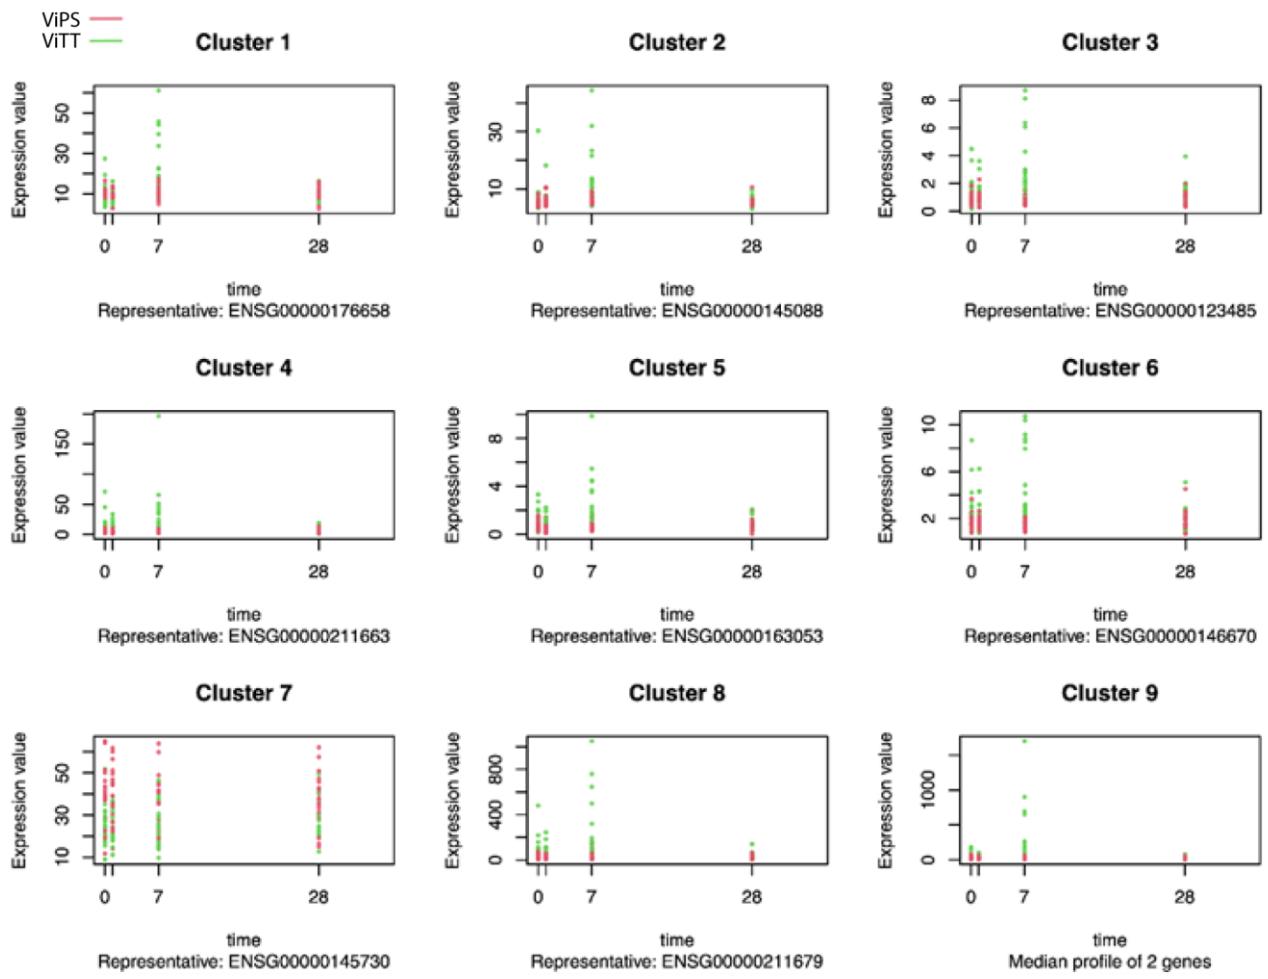

Supplementary information

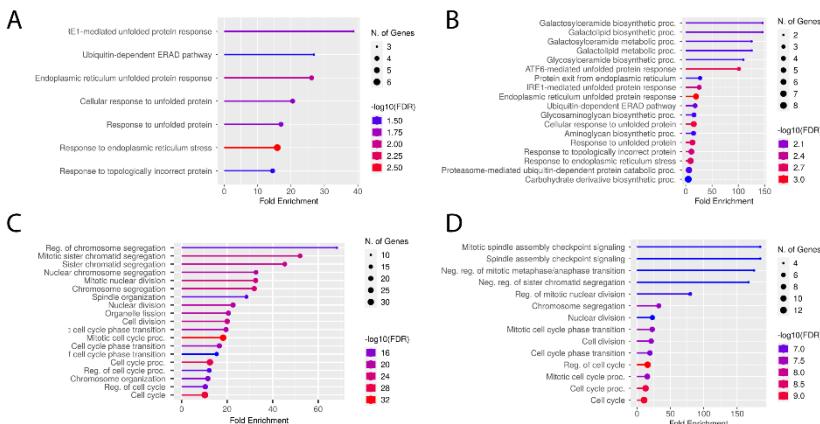

Supplementary figure 1: Gene module analysis seven-days post-vaccination compared with baseline. (A) Weighted gene correlation network analysis (WGCNA) module correlation matrix. (B) Gene within the skyblue3 module with the highest intramodular connectivity. (C) Agreement plot of fold-change of differentially expressed genes 7 days ($p < 0.05$) after ViPS (y-axis) or ViTT (x-axis) compared with pre-vaccination (purple are gene differentially expressed after ViTT only, cyan genes are differentially expressed after either vaccine).

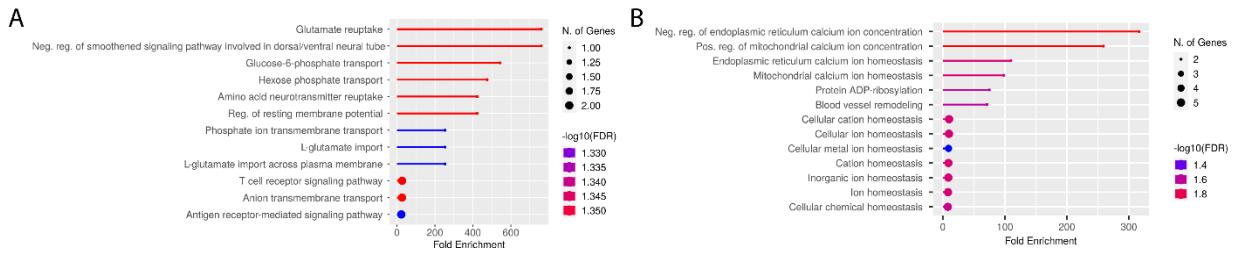

Supplementary figure 2: Mean abundance as outputted from CybersortX of naïve B cells, memory B cells, and plasma cells across study time points. For (A) ViTT nTD participants; (B) ViTT TD participants; (C) ViPS nTD participants; (D) ViPS TD participants.

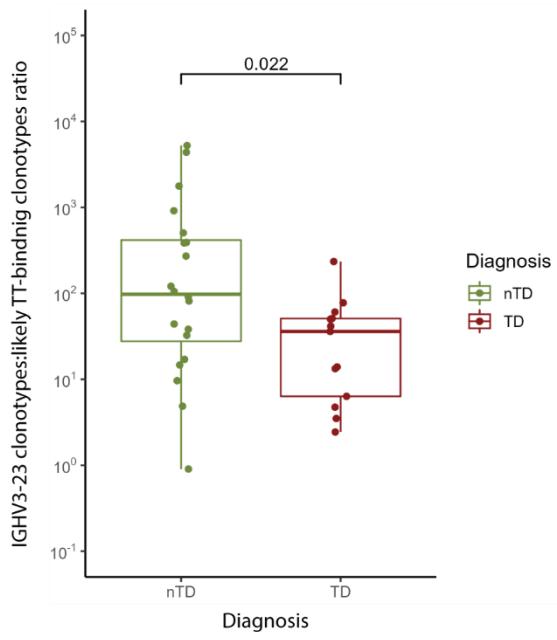

Supplementary figure 3: Significantly different expression profiles across the time points following vaccination among nTD participants. Representative example gene from each cluster is plotted. Regression fit curves are shown for each vaccine group, ViPS recipients are indicated in red, and ViTT in green.

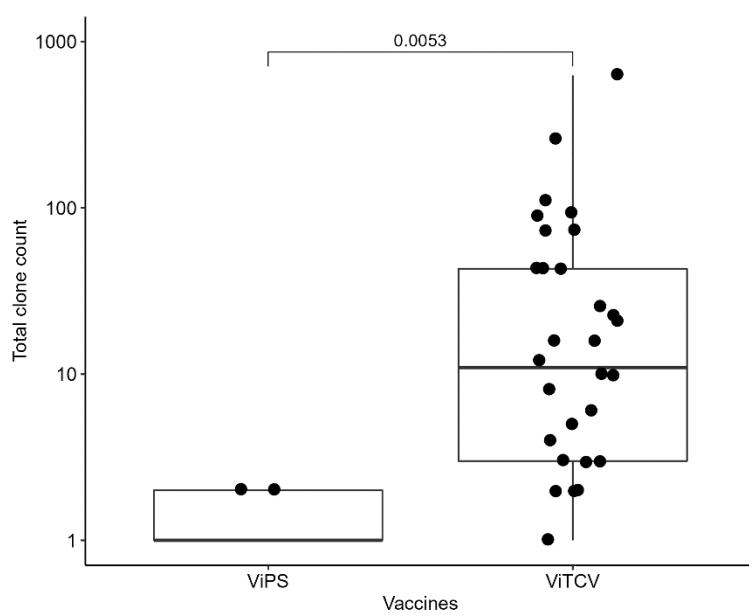

Supplementary figure 4: Significantly enriched GO-terms (biological process) in each of the big clusters containing the genes with unique profile in ViTT vaccinated participants post vaccination. Up to 20 pathways are shown, FDR cut-off 0.05. (A) Cluster 1; (B) Cluster 2; (C) Cluster 3; (D) Cluster 6.

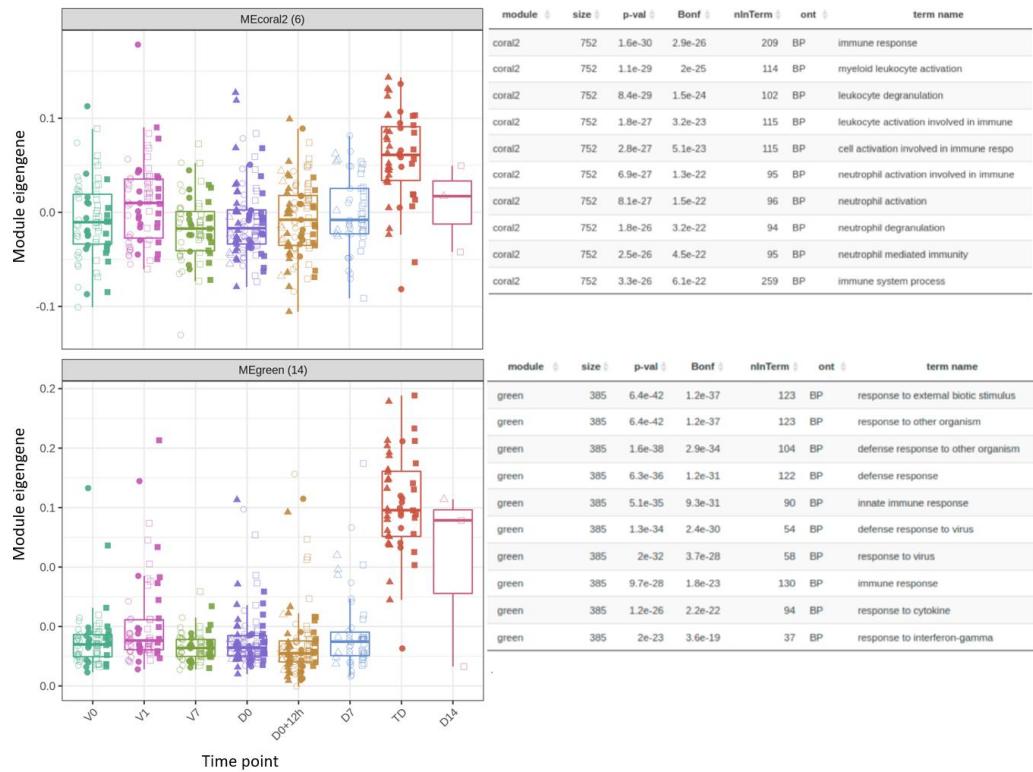

Supplementary figure 5: Significantly enriched GO-terms (biological process) in each of the big clusters containing the genes with unique profile in ViPS vaccinated participants post vaccination. Only clusters with >10 genes were included, up to 20 pathways are shown, FDR cut-off 0.05. Cluster 3 did not have any GO-terms enriched under the defined cut-off. (A) Cluster 4; (B) Cluster 5.

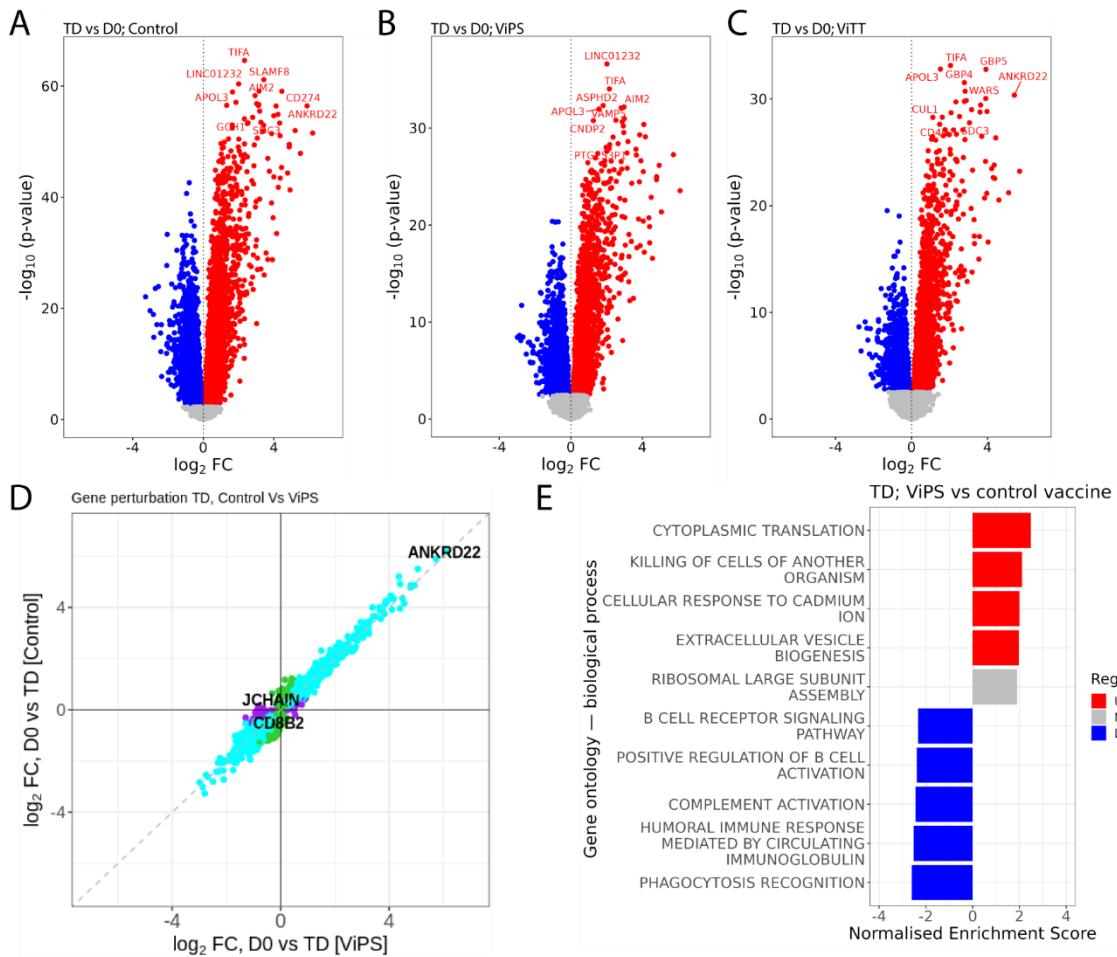

Supplementary figure 6: Ratio of clonotypes using IGHV3-23 to likely TT-binding clonotypes in ViTT participants at seven-days post-vaccination (V7). Significance was determined by Mann–Whitney U test.

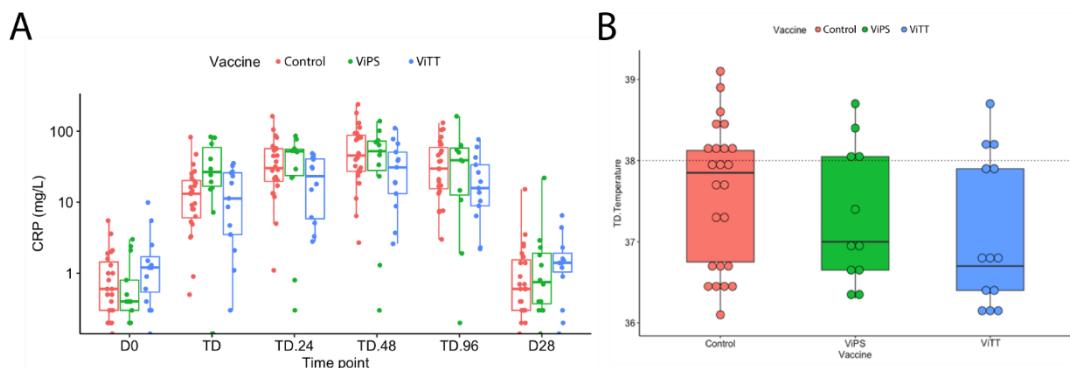

Supplementary figure 7: Total clone count of likely TT-binding BCR clonotypes for ViPS and ViTT recipients at seven-days post-vaccination (V7). Significance was determined by Mann–Whitney U test.

Supplementary figure 8: Weighted gene correlation network analysis (WGCNA) module and top 10 enriched gene ontologies.

Supplementary figure 9: Blood gene expression profile at typhoid diagnosis (TD). (A) Volcano plot of differences in gene expression at the diagnosis time point in the control vaccine group compared with the day of challenge. (B) Volcano plot of differences in gene expression at the diagnosis time point in the ViPS vaccine group compared with the day of challenge. (C) Volcano plot of differences in gene expression at the diagnosis time point in the ViTT vaccine group compared with the day of challenge. (D) Agreement plot of changes in gene expression (differentially expressed genes only) at typhoid diagnosis in those who received ViTT compared with control vaccine recipients. (E) The top 5 upregulated and downregulated pathways from gene set enrichment analysis (GSEA) at the day of typhoid diagnosis in ViTT compared with control vaccine recipients.

Supplementary figure 10: Clinical features around typhoid diagnosis (TD). (A) C-reactive protein measured in blood of infected participants across the time course of typhoid infection. Median concentration in each group is shown in coloured lines. D28 denotes 28 days post-challenge. (B) temperature measured at time point of diagnosis. Dotted line corresponds to the 38°C as a definition of fever.

Supplementary table 1: Information of participants unable to have RNA-Seq data collected.

Vaccine	Time point without RNA-Seq data	Diagnosis	Reason of absence
ViPS	D7	nTD	Blood sample for serological analyses collected, however the tube for RNA-Seq was not collected.
ViPS	TD	TD	Late typhoid diagnosis post-D14 time point, therefore these participants did not have a TD visit by the protocol and the samples were not collected.
ViPS	D7	nTD	Blood sample for serological analyses collected, however the tube for RNA-Seq was not collected.
ViPS	TD	TD	Late typhoid diagnosis post-D14 time point, therefore these participants did not have a TD visit by the protocol and the samples were not collected.
ViPS	D0	nTD	RNA extraction failed as there was not sufficient RNA for sequencing.

Supplementary table 2: Library information.

Library name	Vaccine	Time point	Diagnosis	RNA concentration (ng/µl)	Library size (reads)
