

Supplementary Figure 4.

Supplementary Figure 4. Gene Ontology (GO) with Biological processes (BP) on the genes uniquely up- or down-regulated within each subtype.

Balloon plots representing the GO with BP on the genes that are uniquely up- or down-regulated in A) AR-/NE- and B) AR-/NE+ tumors. The color density indicates the adjusted p values and the size of circles shows number of genes contributed to each BP. X-axes show the “gene ratio”, a percentage of total differentially expressed genes in the given GO term. p.adjust: Adjusted p values using Benjamini-Hochberg (FDR) method.
