List of Tables

1	Vaccination phases and priority groups for primary vaccination advised by the Joint Committee on Vaccination and Immunisation	2
2	Eligibility dates for first vaccine dose	2
3	Variable definitions	4
4	Additional characteristics summarised across subgroups	17
5	Event counts / person-years.	23
6	Unadjusted hazard ratios for effect of vaccination.	24
7	Adjusted hazard ratios for effect of vaccination.	25
8	Per-comparison-period ratio of adjusted hazard ratios for effect of vaccination.	26
9	Covariate hazard ratios for COVID-19 hospitalisation in the BNT162b2 vs unvaccinated comparison and the 65+ years subgroup.	35
10	Covariate hazard ratios for COVID-19 death in the BNT162b2 vs unvaccinated comparison and the 65+ years subgroup.	36
11	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 65+ years subgroup.	37
12	Covariate hazard ratios for Non-COVID-19 death in the BNT162b2 vs unvaccinated comparison and the 65+ years subgroup.	38
13	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 65+ years subgroup.	39
14	Covariate hazard ratios for COVID-19 hospitalisation in the ChAdOx1 vs unvaccinated comparison and the 65+ years subgroup.	40
15	Covariate hazard ratios for COVID-19 death in the ChAdOx1 vs unvaccinated comparison and the 65+ years subgroup.	41
16	Covariate hazard ratios for Positive SARS-CoV-2 test in the ChAdOx1 vs unvaccinated comparison and the 65+ years subgroup.	42
17	Covariate hazard ratios for Non-COVID-19 death in the ChAdOx1 vs unvaccinated comparison and the 65+ years subgroup.	43
18	Covariate hazard ratios for Any SARS-CoV-2 test in the ChAdOx1 vs unvaccinated comparison and the 65+ years subgroup.	44

19	Covariate hazard ratios for COVID-19 hospitalisation in the BNT162b2 vs ChAdOx1 comparison and the 65+ years subgroup.	45
20	Covariate hazard ratios for COVID-19 death in the BNT162b2 vs ChAdOx1 comparison and the 65+ years subgroup.	46
21	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs ChAdOx1 comparison and the 65+ years subgroup.	47
22	Covariate hazard ratios for Non-COVID-19 death in the BNT162b2 vs ChAdOx1 comparison and the 65+ years subgroup.	48
23	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs ChAdOx1 comparison and the 65+ years subgroup.	49
24	Covariate hazard ratios for COVID-19 hospitalisation in the BNT162b2 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	50
25	Covariate hazard ratios for COVID-19 death in the BNT162b2 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	51
26	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	52
27	Covariate hazard ratios for Non-COVID-19 death in the BNT162b2 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	53
28	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	54
29	Covariate hazard ratios for COVID-19 hospitalisation in the ChAdOx1 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	55
30	Covariate hazard ratios for COVID-19 death in the ChAdOx1 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	56
31	Covariate hazard ratios for Positive SARS-CoV-2 test in the ChAdOx1 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	57
32	Covariate hazard ratios for Non-COVID-19 death in the ChAdOx1 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	58
33	Covariate hazard ratios for Any SARS-CoV-2 test in the ChAdOx1 vs unvaccinated comparison and the 18-64 years and clinically vulnerable subgroup.	59
34	Covariate hazard ratios for COVID-19 hospitalisation in the BNT162b2 vs ChAdOx1 comparison and the 18-64 years and clinically vulnerable subgroup.	60
35	Covariate hazard ratios for COVID-19 death in the BNT162b2 vs ChAdOx1 comparison and the 18-64 years and clinically vulnerable subgroup.	61
36	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs ChAdOx1 comparison and the 18-64 years and clinically vulnerable subgroup.	62
37	Covariate hazard ratios for Non-COVID-19 death in the BNT162b2 vs ChAdOx1 comparison and the 18-64 years and clinically vulnerable subgroup.	63
38	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs ChAdOx1 comparison and the 18-64 years and clinically vulnerable subgroup.	64
39	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 40-64 years subgroup.	65
40	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 40-64 years subgroup.	66
41	Covariate hazard ratios for COVID-19 hospitalisation in the ChAdOx1 vs unvaccinated comparison and the 40-64 years subgroup.	67
42	Covariate hazard ratios for COVID-19 death in the ChAdOx1 vs unvaccinated comparison and the 40-64 years subgroup.	68
43	Covariate hazard ratios for Positive SARS-CoV-2 test in the ChAdOx1 vs unvaccinated comparison and the 40-64 years subgroup.	69

44	Covariate hazard ratios for Non-COVID-19 death in the ChAdOx1 vs unvaccinated comparison and the 40-64 years subgroup.	70
45	Covariate hazard ratios for Any SARS-CoV-2 test in the ChAdOx1 vs unvaccinated comparison and the 40-64 years subgroup.	71
46	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs ChAdOx1 comparison and the 40-64 years subgroup.	72
47	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs ChAdOx1 comparison and the 40-64 years subgroup.	73
48	Covariate hazard ratios for COVID-19 hospitalisation in the BNT162b2 vs unvaccinated comparison and the 18-39 years subgroup.	74
49	Covariate hazard ratios for Positive SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 18-39 years subgroup.	76
50	Covariate hazard ratios for Any SARS-CoV-2 test in the BNT162b2 vs unvaccinated comparison and the 18-39 years subgroup.	77
51	Event counts / person-years (females only).	79
52	Event counts / person-years (males only).	80
53	Unadjusted hazard ratios for effect of vaccination (female-only model).	81
54	Unadjusted hazard ratios for effect of vaccination (male-only model).	82
55	Adjusted hazard ratios for effect of vaccination (female-only model).	83
56	Adjusted hazard ratios for effect of vaccination (male-only model).	84
57	Per-comparison-period ratio of adjusted hazard ratios for effect of vaccination (female-only model).	85
58	Per-comparison-period ratio of adjusted hazard ratios for effect of vaccination (male-only model).	86
59	Event counts / person-years (older adults).	91
60	Unadjusted hazard ratios for effect of vaccination (older adults).	92
61	Adjusted hazard ratios for effect of vaccination (older adults).	93
62	Per-comparison-period ratio of adjusted hazard ratios for effect of vaccination (older adults).	93

25	Unadjusted and adjusted hazard ratios for ChAdOx1 vs unvaccinated	28
26	Unadjusted and adjusted hazard ratios for BNT162b2 vs ChAdOx1	29
27	Unadjusted and adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 vs unvaccinated	30
28	Unadjusted and adjusted hazard ratios for any SARS-CoV-2 test for ChAdOx1 vs unvaccinated	31
29	Unadjusted and adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 vs ChAdOx1	32
30	Adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 and ChAdOx1 vs unvaccinated	33
31	Adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 vs ChAdOx1	34
32	Adjusted hazard ratios for BNT162b2 vs unvaccinated from the female- and male-only models.	87
33	Adjusted hazard ratios for ChAdOx1 vs unvaccinated from the female- and male-only models.	88
34	Adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 vs unvaccinated from the female- and male-only models.	89
35	Adjusted hazard ratios for any SARS-CoV-2 test for ChAdOx1 vs unvaccinated from the female- and male-only models.	90
36	Adjusted hazard ratios for BNT162b2 vs unvaccinated from the 65-74 years and 75+ years models.	94
37	Adjusted hazard ratios for ChAdOx1 vs unvaccinated from the 65-74 years and 75+ years models.	95
38	Adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 vs unvaccinated from the 65-74 years and 75+ years models.	96
39	Adjusted hazard ratios for any SARS-CoV-2 test for ChAdOx1 vs unvaccinated from the 65-74 years and 75+ years models.	96

Supplementary Methods

Supplementary Table 1: Vaccination phases and priority groups for primary vaccination advised by the Joint Committee on Vaccination and Immunisation

Vaccination phase	Priority group	Risk group
1	1	Residents in a care home for older adults Staff in a care home for older adults
	2	All those 80 years of age and over Frontline health and social care workers
	3	All those 75 years of age and over
	4a	All those 70 years of age and over
	4b	Individuals aged 16 to 69 in a high risk group ^a
	5	All those 65 years of age and over
	6	Individuals aged 16 to 65 years in an at-risk group ^a
	7	All those 60 years of age and over
	8	All those 55 years of age and over
	9	All those 50 years of age and over
2	10	All those 40 years of age and over
	11	All those 30 years of age and over
	12	All those 18 years of age and over

^a See [COVID-19: the green book, chapter 14a](#) for definitions of the high-risk and at-risk groups.

JCVI: Joint Committee on Vaccination and Immunisation

Supplementary Table 3: Variable definitions

Name	Description	Encoding	Date defined
Exclusion criteria			
Evidence of prior COVID-19 infection	Date of code corresponding to COVID-19 hospitalisation, positive SARS-CoV-2 test, or probable COVID-19 code in GP record.	Date	First occurrence
End-of-life care pathway initiated	Date of code corresponding to end-of-life care or midazolam injection used in end-of-life care in patient's record.	Date	First occurrence prior to SVP
Resident in care home	Date of code corresponding to care home in patient's record.	Date	First occurrence prior to SVP
Medically housebound	Date of most recent code corresponding to medically housebound patient's record, not superseded by a code indicating that the patient is no longer housebound.	Date	First occurrence prior to SVP
JCVI group definitions			
Age	-	Numeric	31 March 2021 for individuals eligible in phase 1 and 1 July 2021 for individuals eligible in phase 2
High risk	A code in the primary care record indicating that the patient was at high risk of developing complications from COVID-19, not superseded by a code indicating that they were at low or moderate risk.	0; 1.	18 January 2021 (eligibility date for high risk individuals).
At-risk	A code corresponding to one or more of the following: severe obesity (BMI 40+ kg/m ²); learning disability including Down's syndrome; serious mental illness; chronic heart disease; chronic respiratory disease; chronic liver disease; chronic kidney disease; chronic neurological disease; diabetes; immunosuppressed (diagnosis of permanent immunosuppression or asplenia, or currently taking immunosuppressant medication).	0; 1.	15 February 2021 (eligibility date for at-risk individuals).
Strata			
JCVI group	Priority groups 2-9 are as defined by the JCVI expert advisory group, and we further define groups 10, 11 and 12 are defined as those aged 40-49, 30-39 and 18-29 years, respectively, who were not assigned to JCVI groups 4 (high risk) or 6 (at-risk).	2-12	-
Eligibility date	Date on which JCVI group (or age range within group) became eligible for 1st dose of COVID-19 vaccination.	Date	-
Region	NHS region based on practice address.	East of England; Midlands; London; North East; Yorkshire; North West; South East; South West.	Eligibility date + 6 weeks.
Potential confounders (demographic)			
Sex	-	M; F.	-
Age	Age in whole years.	Numeric ^a	Start of SVP
Ethnicity	From primary care records or SUS if missing from primary care.	Black; Mixed; South Asian; White; Other.	Eligibility date + 6 weeks

Supplementary Table 3: Variable definitions (*continued*)

Name	Description	Encoding	Date defined
Index of Multiple Deprivation (IMD)	IMD quintile based on patient address. The IMD is a measure of socioeconomic deprivation based on lower-layer super output area (LSOA; a small geographical area defined by the Office of National Statistics). For more information see the English IMD 2019: technical report	1; 2; 3; 4; 5.	Eligibility date + 6 weeks
Potential confounders (clinical)			
Body Mass Index (BMI)	Based on numeric BMI data from primary care records.	Under 30kg/m ² or not recorded; 30-34.9; 35-39.9; 40+ kg/m ² .	Start of SVP
Learning disability including Down's syndrome.	Any code in primary care record before date defined.	0; 1.	Start of SVP
Serious mental illness.	Any code in primary care record before date defined.	0; 1.	Start of SVP
Multimorbidity	Number of the following comorbid conditions in different organ systems: Chronic heart disease; Chronic respiratory disease; Chronic liver disease; Chronic kidney disease; Diabetes; Chronic neurological disease; Immunosuppressed (diagnosis of permanent immunosuppression or asplenia, or currently taking immunosupresant medication)	0; 1; 2+	Start of SVP
Influenza vaccination	Any record in past 5 years.	0; 1.	Start of SVP
Pregnancy	Pregnancy recorded in 36 weeks prior to date and no delivery code recorded more recently than pregnancy code.	0; 1.	Start of SVP
Number of SARS-CoV-2 tests.	SARS-CoV-2 tests were identified using SGSS records and based on swab date. Both polymerase chain reaction (PCR) and lateral flow tests will be included, without differentiation between symptomatic and asymptomatic infection.	Integer	Between 18 May 2020 (when widespread testing became available in England) and the earliest date of eligibility for first dose in the subgroup.

JCVI: Joint Committee on Vaccination and Immunisation; SVP: second vaccination period.

^a Age was modelled separately within each strata. Age within strata was modelled as linear, with quadratic terms additionally included for strata with age range >5 years.

Box A: Initial eligibility criteria.**Inclusion criteria:**

- Registered at a GP surgery (using TPP's SystemOne clinical information system) for at least one year prior to the date at which they became eligible for vaccination.
- Aged 18 years or over on 1 July 2021

Exclusion criteria:

- Aged over 120 on 1 July 2021
- Sex unknown
- Geographical region, ethnicity or deprivation unknown on eligibility date + 6 weeks.
- Evidence of SARS-CoV-2 infection recorded on or before eligibility date + 6 weeks.
- Recorded as being in care home or medically housebound on or before eligibility date + 6 weeks

Box B: Eligibility criteria for identification of second vaccination period (SVP).**Inclusion criteria:**

- Received second dose of BNT162b2 or ChAdOx1 between eligibility date + 6 weeks and eligibility date + 16 weeks (first and second doses must be same brand).

Exclusion criteria:

- First dose received before eligibility date.
- Interval of less than 6 or more than 14 weeks between first and second doses.
- Flagged as healthcare worker on vaccination record.

Box C: Inclusion criteria for vaccinated group:

- Second dose of BNT162b2 or ChAdOx1 received during the SVP.

Box D: Inclusion criteria for unvaccinated group:

- No doses of vaccine received before the start of the SVP.

Box E: Exclusion criteria for both groups:

- Evidence of SARS-CoV-2 infection recorded on or before start of SVP.
- Recorded as being in care home on or before start of the SVP.
- End-of-life care pathway initiated on or before start of the SVP.

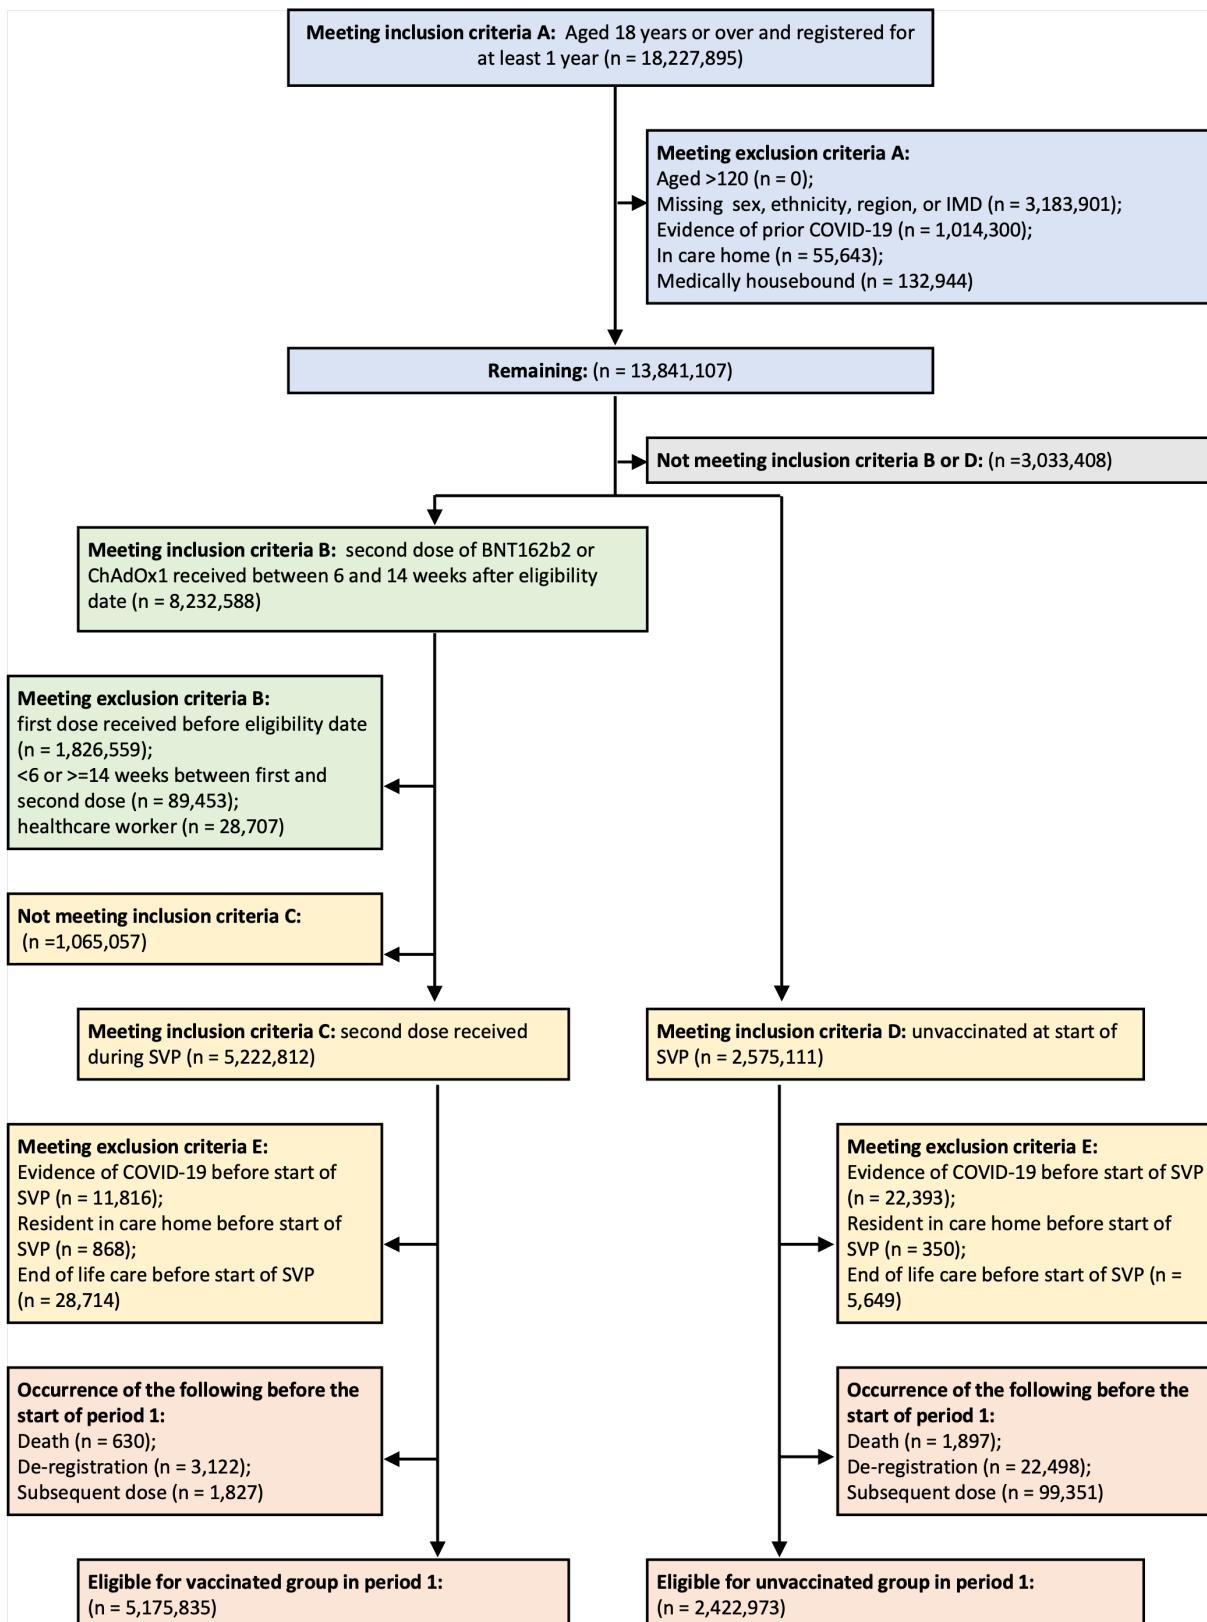

Box F: Individual i excluded from comparison period k with outcome z if any of the following events have occurred on or before the start of their follow-up for comparison period k ($\text{start_fu}_{\{ki\}}$):

- Third dose of vaccine received for individuals in the vaccinated group, or first dose of vaccine received for individuals in the unvaccinated group.
- Outcome z^* .
- Death of any cause.
- De-registration from all practices using TPP's SystemOne clinical information system.

^a And not clinically vulnerable

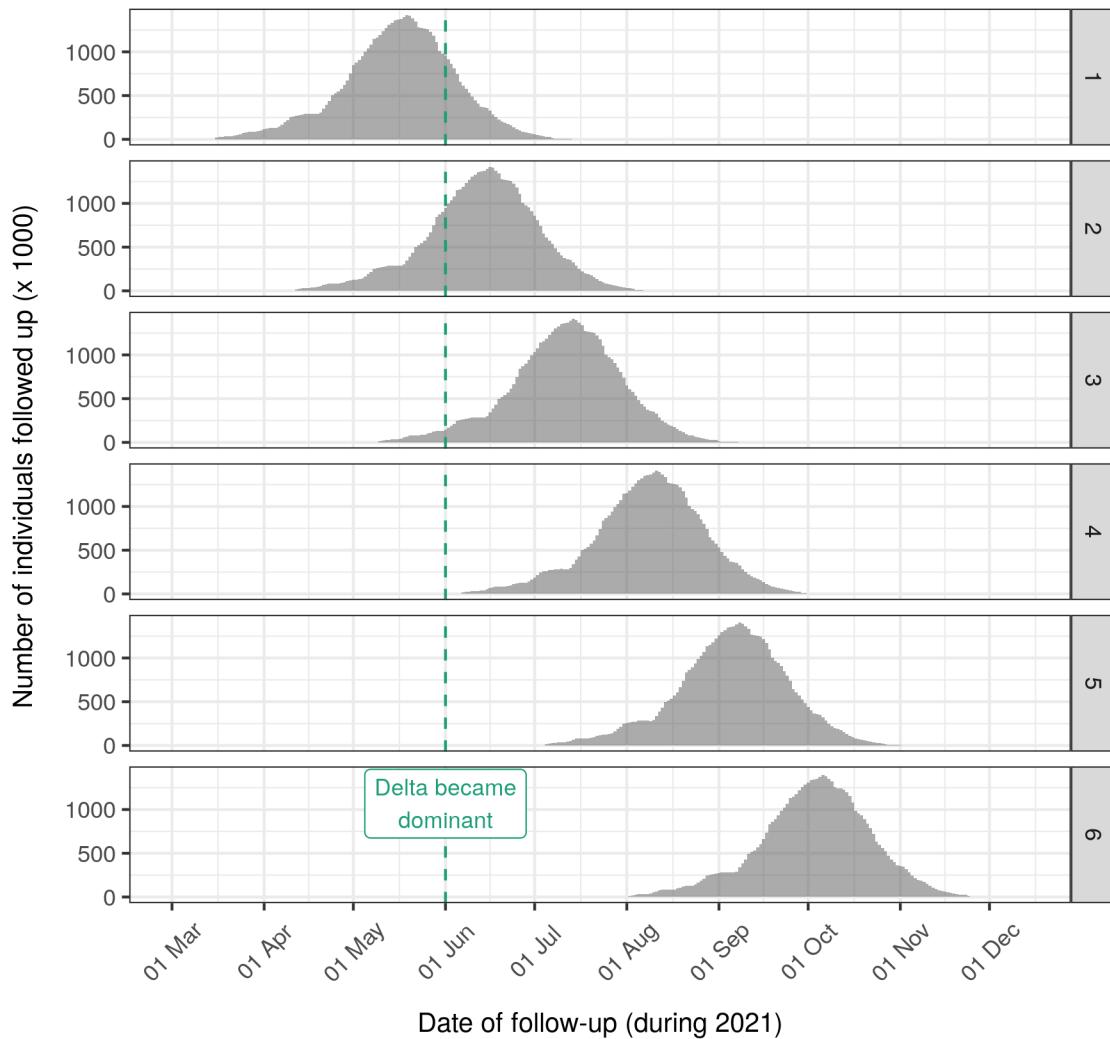

Attrition due to subsequent vaccination

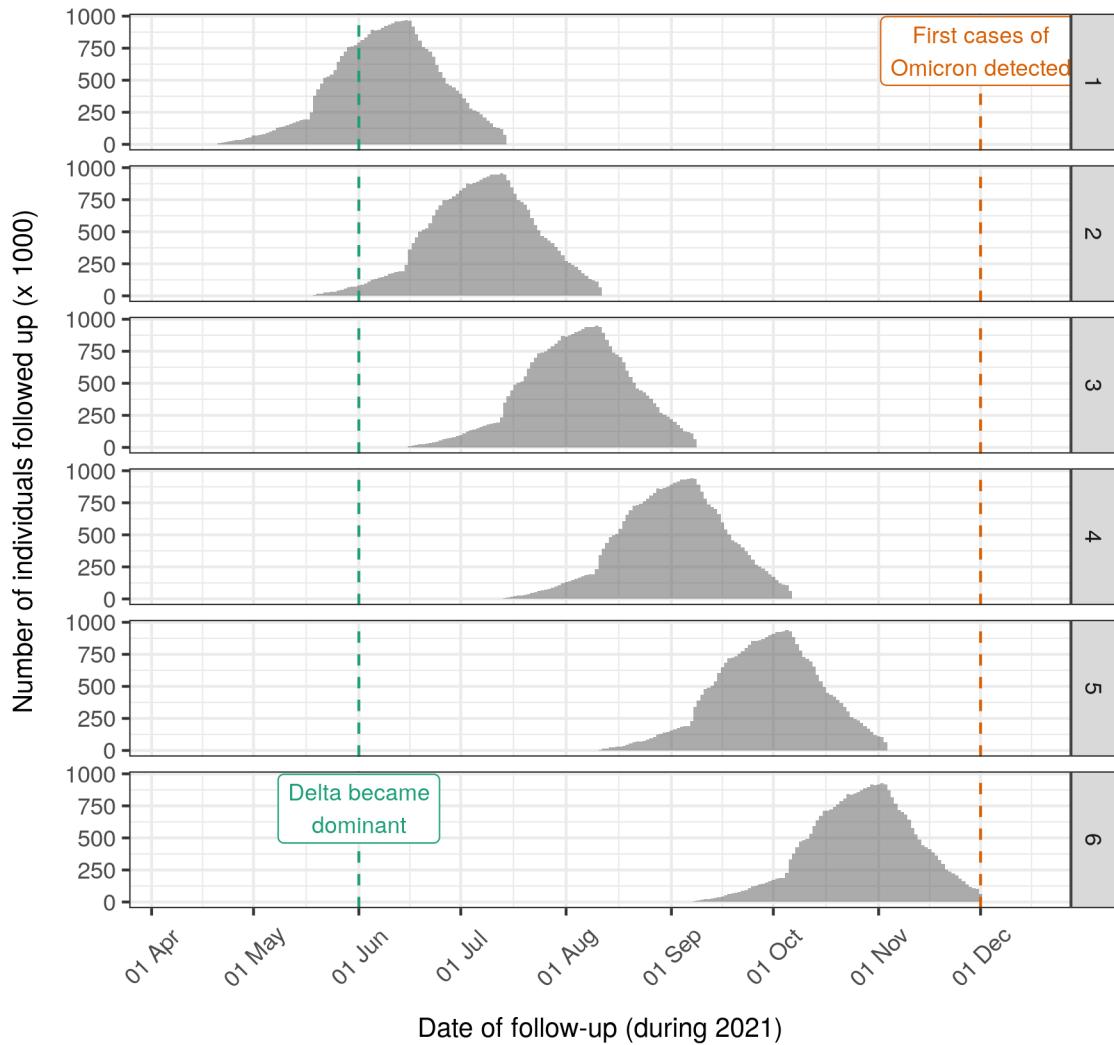

Supplementary Figure 19: Cumulative incidence of subsequent vaccination. *And not clinically vulnerable.

Distribution of follow-up time

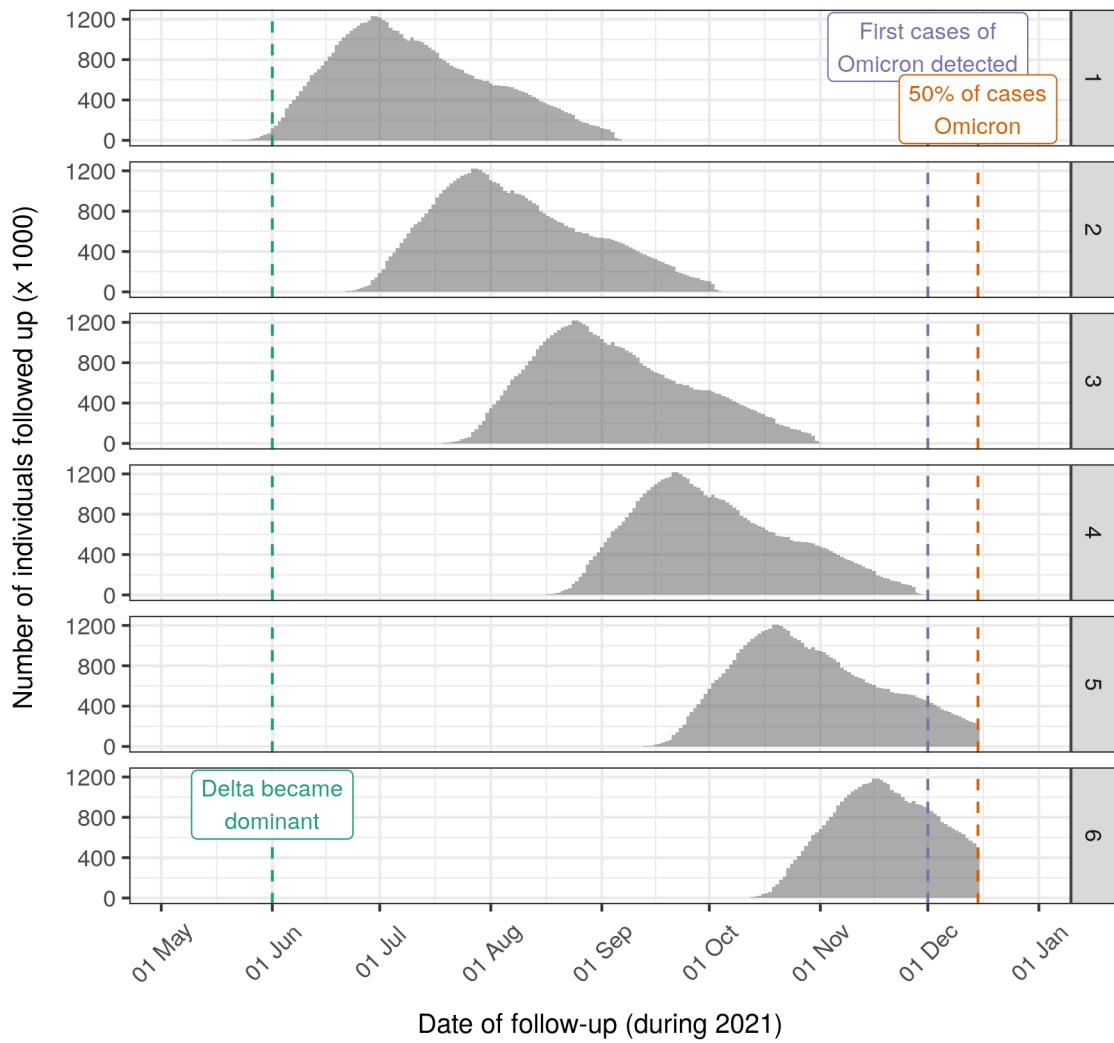

The distribution of follow-up time in relation to virus variants is given in Supplementary Figures 20 to 23. We used 1 June 2021 as the approximate date at which the Delta variant became dominant in England ([BMJ 2021;373:n1445](#)), 1 December 2021 as the date at which the first cases of Omicron were detected, and 15 December 2021 as the date at which Omicron became dominant ([Omicron daily overview: 17 December 2021](#)).

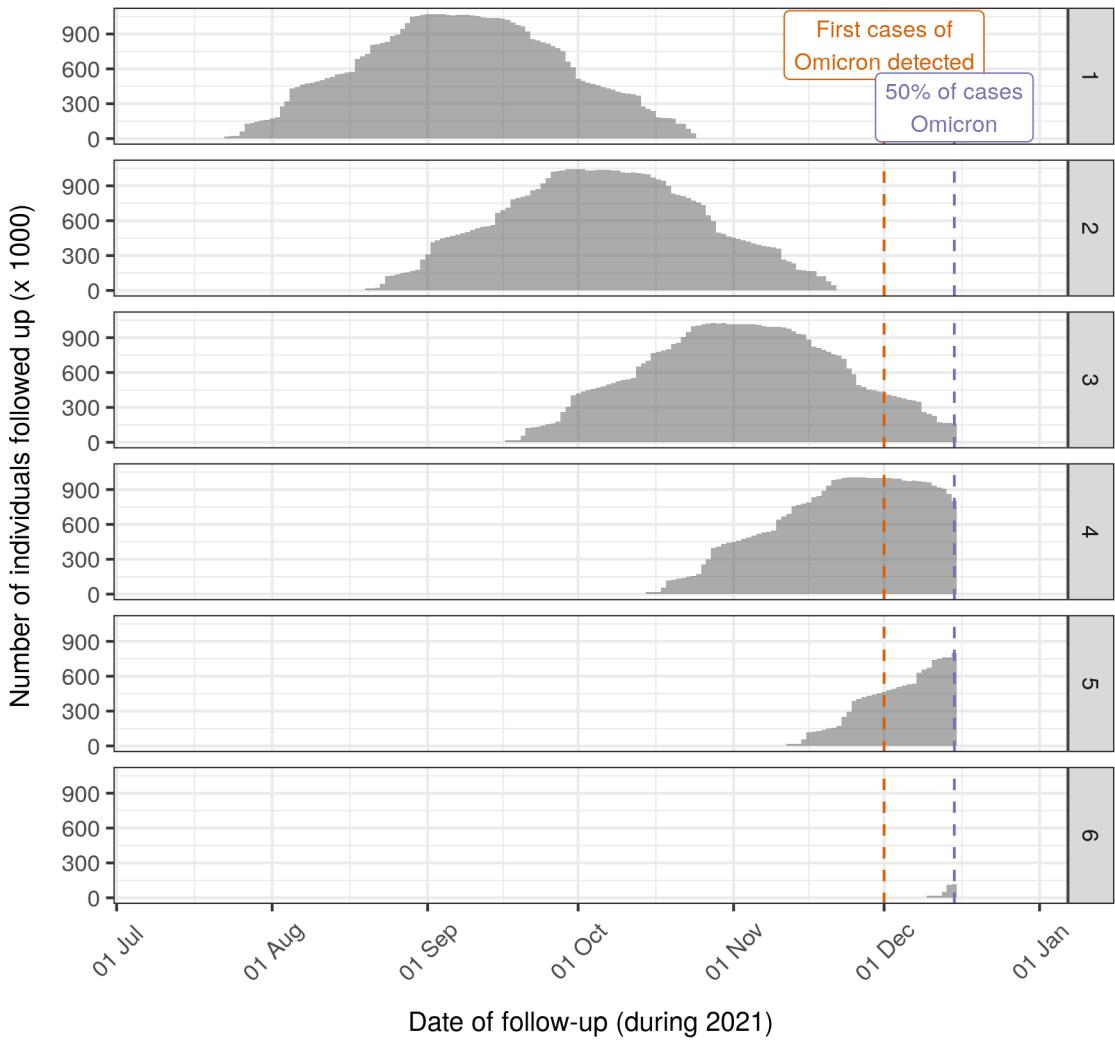

Supplementary Figure 20: Distribution of follow-up time across the six comparison periods in the 65+ years subgroup. Comparison periods (numeric labels on right-hand side of plots) correspond to the following weeks since second vaccine dose: 1 = 3-6 weeks; 2 = 7-10 weeks; 3: 11-14 weeks; 4: 15-18 weeks; 5: 19-22 weeks; 6 = 23-26 weeks.

Supplementary Figure 21: Distribution of follow-up time across the six comparison periods in the 18-64 years and clinically vulnerable subgroup. Comparison periods (numeric labels on right-hand side of plots) correspond to the following weeks since second vaccine dose: 1 = 3-6 weeks; 2 = 7-10 weeks; 3: 11-14 weeks; 4: 15-18 weeks; 5: 19-22 weeks; 6 = 23-26 weeks.

Supplementary Figure 22: Distribution of follow-up time across the six comparison periods in the 40-64 years subgroup. Comparison periods (numeric labels on right-hand side of plots) correspond to the following weeks since second vaccine dose: 1 = 3-6 weeks; 2 = 7-10 weeks; 3: 11-14 weeks; 4: 15-18 weeks; 5: 19-22 weeks; 6 = 23-26 weeks.

Supplementary Figure 23: Distribution of follow-up time across the six comparison periods in the 18-39 years subgroup. Comparison periods (numeric labels on right-hand side of plots) correspond to the following weeks since second vaccine dose: 1 = 3-6 weeks; 2 = 7-10 weeks; 3: 11-14 weeks; 4: 15-18 weeks; 5: 19-22 weeks; 6 = 23-26 weeks.

Waning vaccine effectiveness in risk-based subgroups

This subsection provides additional results for the waning of vaccine effectiveness across the four risk-based subgroups. Supplementary Table 5 gives the event counts / person-years for each subgroup, outcome and comparison period; Supplementary Tables 6 and 7 give the unadjusted and adjusted hazard ratios (respectively) for each subgroup, outcome and comparison period; Supplementary Table 8 gives the per-comparison-period ratio of adjusted hazard ratios. The unadjusted and adjusted hazard ratios are also plotted in Supplementary Figures 24, 25 and 26 for BNT162b2 vs unvaccinated, ChAdOx1 vs unvaccinated and BNT162b2 vs ChAdOx1 respectively. The unadjusted and adjusted hazard ratios with any SARS-CoV-2 test as the outcome are plotted in Supplementary Figures 27, 28 and Supplementary Figure 29 for BNT162b2 vs unvaccinated, ChAdOx1 vs unvaccinated and BNT162b2 vs ChAdOx1 respectively. The adjusted hazard ratios and lines corresponding to the ratio of hazard ratios with any SARS-CoV-2 test as the outcome are plotted in Supplementary Figure 30 for BNT162b2 vs unvaccinated and ChAdOx1 vs unvaccinated, and Supplementary Figure 31 for BNT162b2 vs ChAdOx1. The hazard ratios corresponding to the covariates in the adjusted models are given in Supplementary Tables 9 to 50.

Supplementary Table 5: Event counts / person-years.

Outcome	Weeks since 2nd dose	65+ years			18-64 years and clinically vulnerable			40-64 years ^a			18-39 years ^a

* Estimates correspond to a 1-year increase in age (or age-squared as indicated) within the given age categories.

Waning vaccine effectiveness in risk- and sex-based subgroups

This subsection provides additional results for the waning of vaccine effectiveness across eight subgroups: the four risk-based subgroups, each split into females and males. Supplementary Tables 51 and 52 give the event counts / person-years for each subgroup, outcome and comparison period for females and males respectively. Supplementary Tables 53 and 54 give the unadjusted hazard ratios for females and males respectively. Supplementary Tables 55 and 56 give the adjusted hazard ratios for females and males respectively. Supplementary Tables 57 and 58 give the per-comparison-period ratio of adjusted hazard ratios for females and males respectively. The adjusted hazard ratios are plotted in Supplementary Figures 32 and 33 for BNT162b2 vs unvaccinated and ChAdOx1 vs unvaccinated respectively. The adjusted hazard ratios with any SARS-CoV-2 test as the outcome are plotted in Supplementary Figures 34 and 35 for BNT162b2 vs unvaccinated and ChAdOx1 vs unvaccinated respectively.

Supplementary Table 51: Event counts / person-years (females only).

^a And not clinically vulnerable

Supplementary Figure 32: Adjusted hazard ratios for BNT162b2 vs unvaccinated from the female- and male-only models.

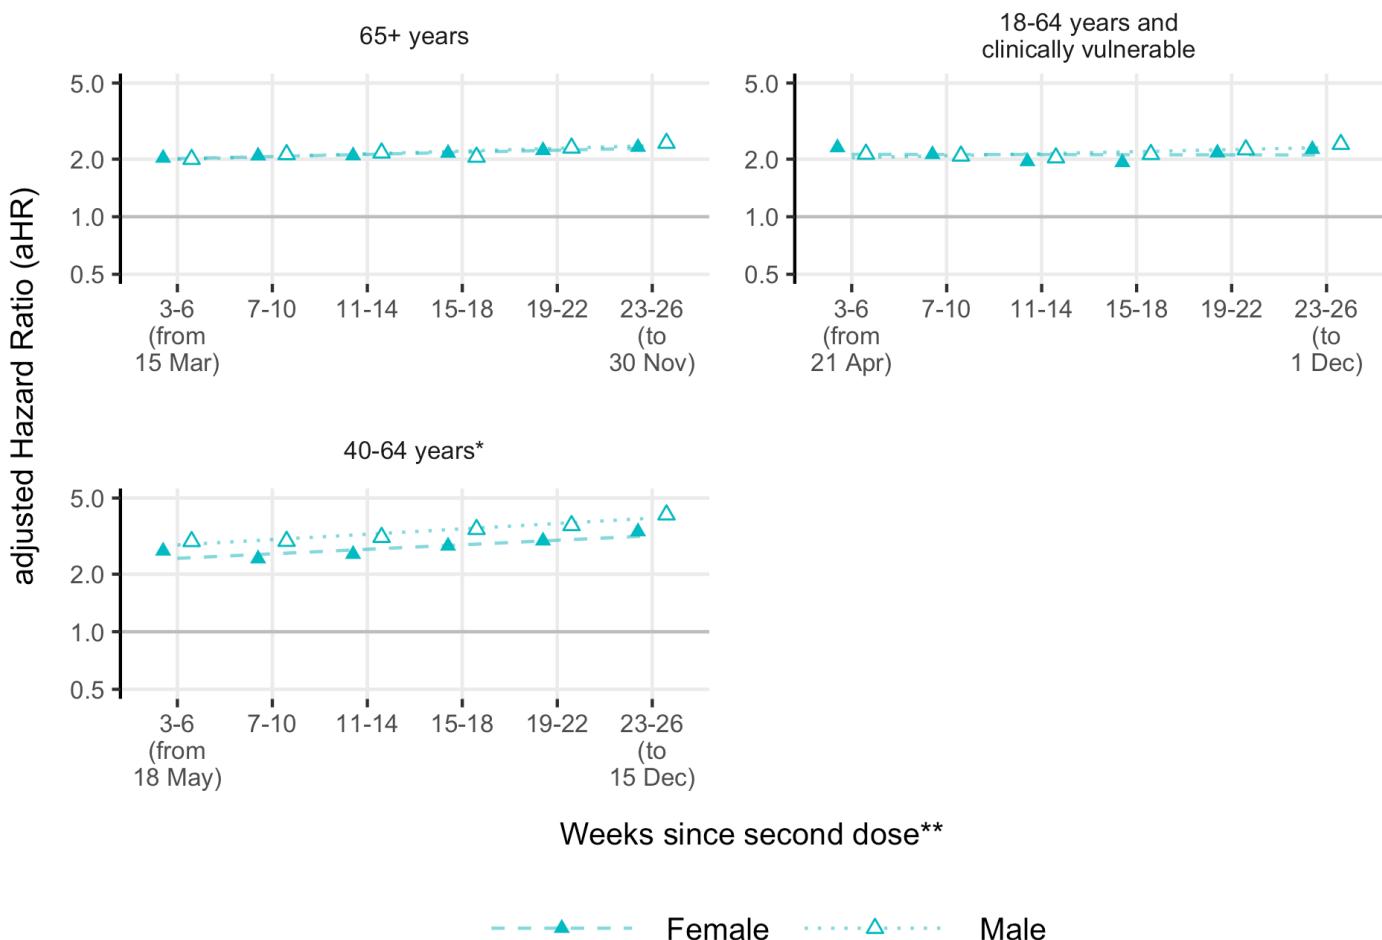

Supplementary Figure 33: Adjusted hazard ratios for ChAdOx1 vs unvaccinated from the female- and male-only models.

Any SARS-CoV-2 test

Supplementary Figure 34: Adjusted hazard ratios for any SARS-CoV-2 test for BNT162b2 vs unvaccinated from the female- and male-only models.

Any SARS-CoV-2 test

Supplementary Figure 35: Adjusted hazard ratios for any SARS-CoV-2 test for ChAdOx1 vs unvaccinated from the female- and male-only models.

Waning vaccine effectiveness in older adults

This subsection provides additional results for the waning of vaccine effectiveness across two additional subgroups: 65-74 years and 75+ years. Supplementary Table 59 gives the event counts / person-years for each subgroup, outcome and comparison period. Supplementary Tables 60 and 61 give the unadjusted and adjusted hazard ratios respectively. Supplementary Table 57 gives the per-comparison-period ratio of adjusted hazard ratios. The adjusted hazard ratios are plotted in Supplementary Figures 36 and 37 for BNT162b2 vs unvaccinated and ChAdOx1 vs unvaccinated respectively. The adjusted hazard ratios with any SARS-CoV-2 test as the outcome are plotted in Supplementary Figures 38 and 39 for BNT162b2 vs unvaccinated and ChAdOx1 vs unvaccinated respectively.

Supplementary Table 59: Event counts / person-years (older adults).

Outcome	Weeks since 2nd dose	65-74 years			75+ years
