

Supplementary Figure 5. AAV-PR-sc-CBA-GFP can transduce smooth muscle cells in the aorta of systemically injected mice. A representative image from a BALB/c mouse is shown. Mice were sacrificed two weeks after injection and aorta sections stained with DAPI (nuclei, blue), anti-SM22 α (smooth muscle, magenta). Intrinsic GFP fluorescence is displayed in green. Inset: Zoom-in on transduced smooth muscle cell. Scale bar= 30 μ m.
