

# Genetic evidence for serum amyloid P component as a drug target for treatment of neurodegenerative disorders

## Supplementary information

Schmidt *et al.*

## Contents

## Figures

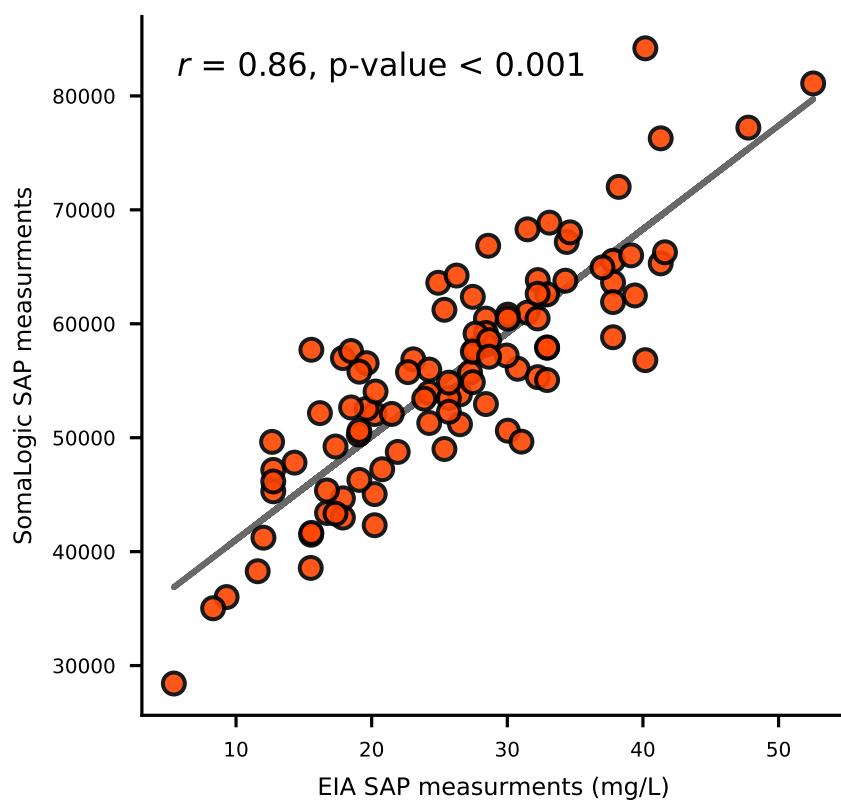

S1	Correlation between SomaLogic values and immunoassay for actual plasma SAP concentration . . . . .	2
S2	Locus view plots . . . . .	6
S3	GWAS Catalog look-ups . . . . .	9

## Tables

S1	Lead variants for serum amyloid P component (SAP) plasma concentration . . . . .	11
S2	SAP lead variant associations with plasma C-reactive protein (CRP) concentration . . . . .	12
S3	Open target v2g results mapping <i>trans</i> -variant rs2808467 to a putative causal gene . . . . .	13
S4	Open target v2g results mapping <i>trans</i> -variant rs165316 to a putative causal gene . . . . .	14
S5	Open target v2g results mapping <i>trans</i> -variant rs10188292 to a putative causal gene . . . . .	15
S6	Open target v2g results mapping <i>trans</i> -variant rs4665972 to a putative causal gene . . . . .	16
S7	Open target v2g results mapping <i>trans</i> -variant rs112875651 to a putative causal gene . . . . .	17
S8	Open target v2g results mapping <i>trans</i> -variant rs9591359 to a putative causal gene . . . . .	18
S9	GWAS Catalog look-ups for putative causal genes for plasma SAP value. . . . .	19
S10	The <i>cis</i> -Mendelian randomization results for the effects of one standard deviation higher plasma SAP value or plasma CRP concentration on dementia outcomes. . . . .	20
S11	The <i>cis</i> -Mendelian randomization results for the effects of one standard deviation higher plasma SAP value on secondary outcomes . . . . .	21
S12	The <i>cis</i> -Mendelian randomization results for the effects of one standard deviation higher plasma CRP concentration on secondary outcomes . . . . .	23
S13	The <i>cis</i> -multivariable Mendelian randomization results for the effects of one standard deviation higher plasma SAP value or plasma CRP concentration. . . . .	24

## Figures

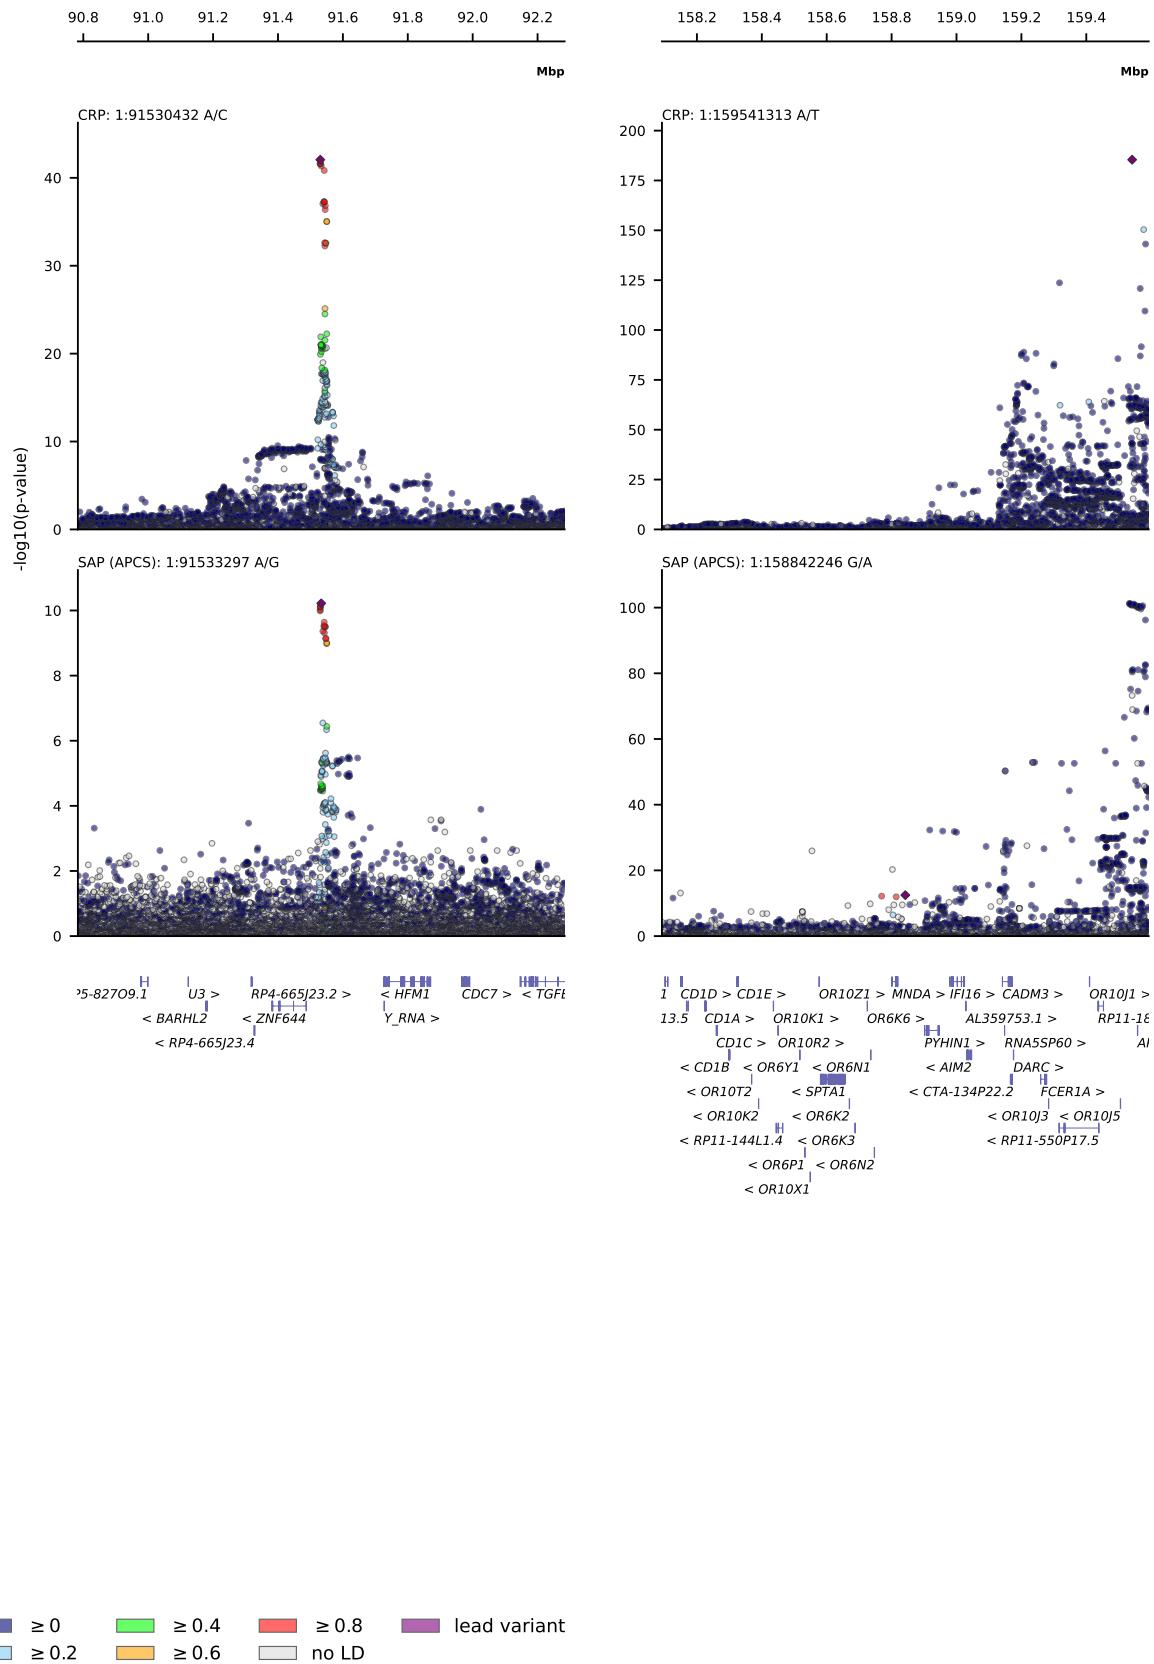

2

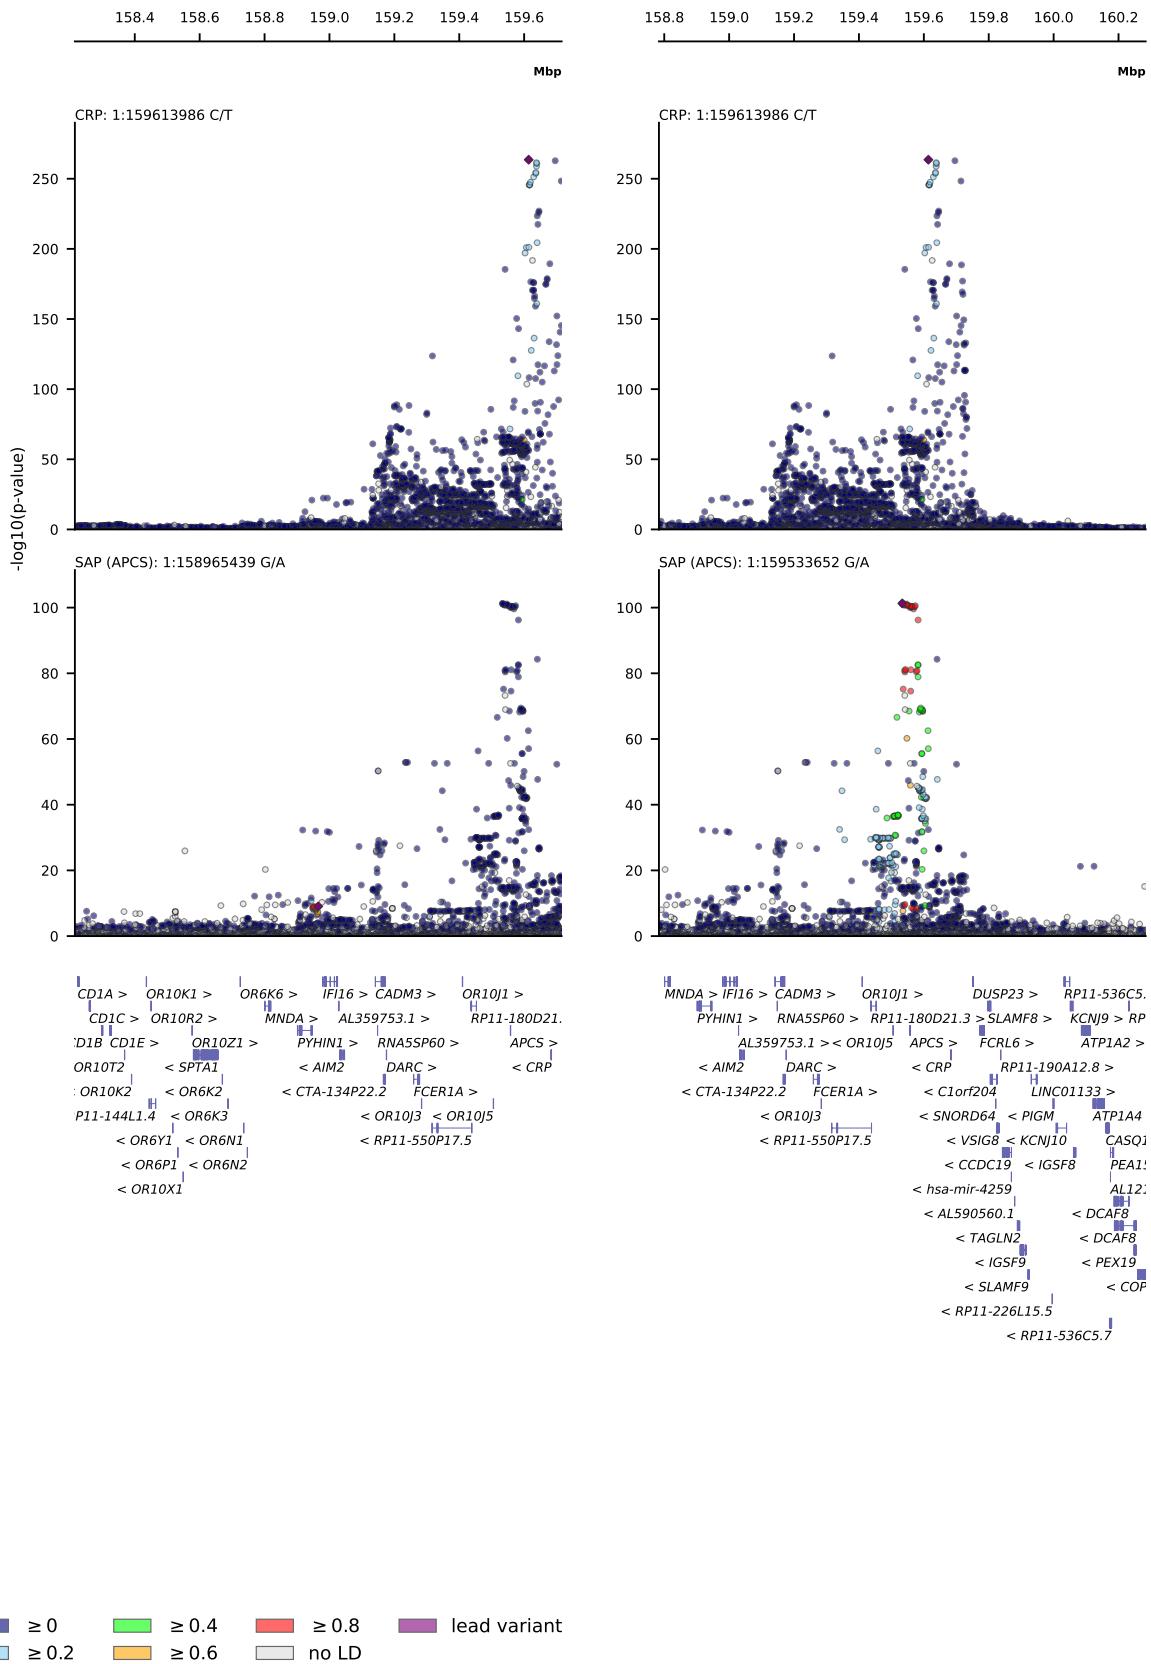

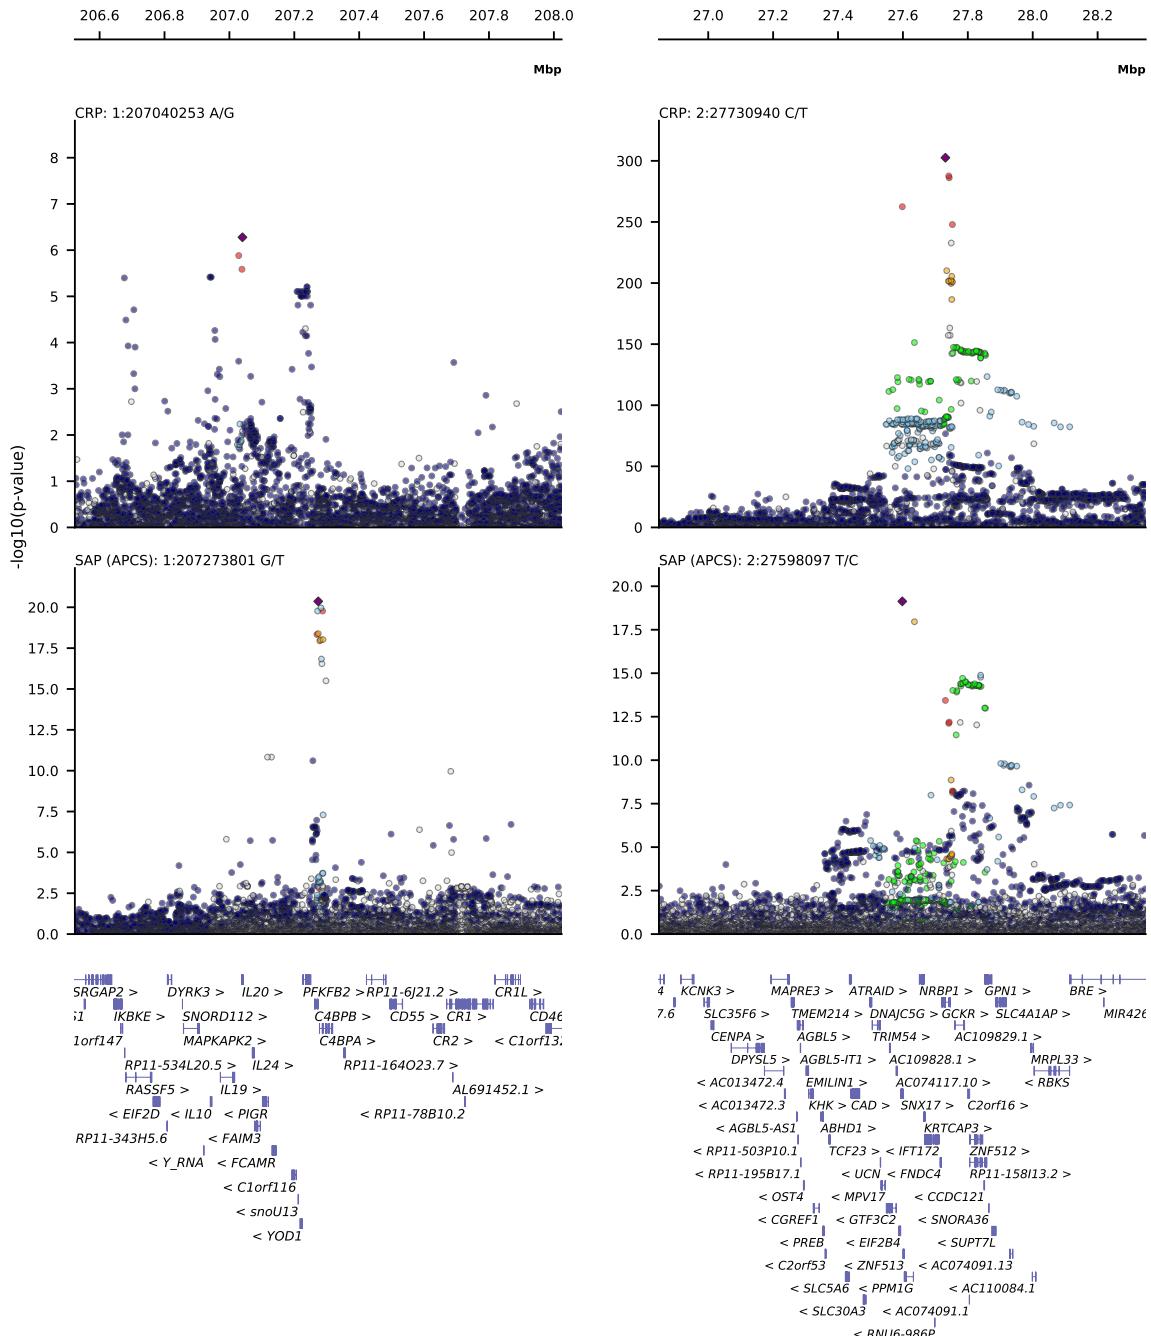

**Figure S1:** The Pearson correlation estimated in 100 plasma samples from the EPIC-Norfolk study, between SomaLogic relative intensity scores for plasma SAP value and electroimmunoassay (EIA) of actual SAP concentration, standardised and calibrated with authentic, pure, comprehensively characterized, native, human SAP.

**Figure S2:**

Locus view plots showing the plasma SAP and CRP signals of the ten independent lead variants identified in the present SAP GWAS meta-analysis of three independent pQTL GWAS based on SomaLogic assays. The variant-specific  $-\log_{10}(p\text{-value})$  is plotted (y-axis) against the genomic location (x-axis). The lead variant is indicated by a purple diamond, with linkage disequilibrium (LD) relative to the lead variant indicated by the colours of the dots. The R-squared, representing LD, was from a random sample of 5,000 UK Biobank participants supplemented by the 592 participants of the 1,000 Genomes EUR reference panel.

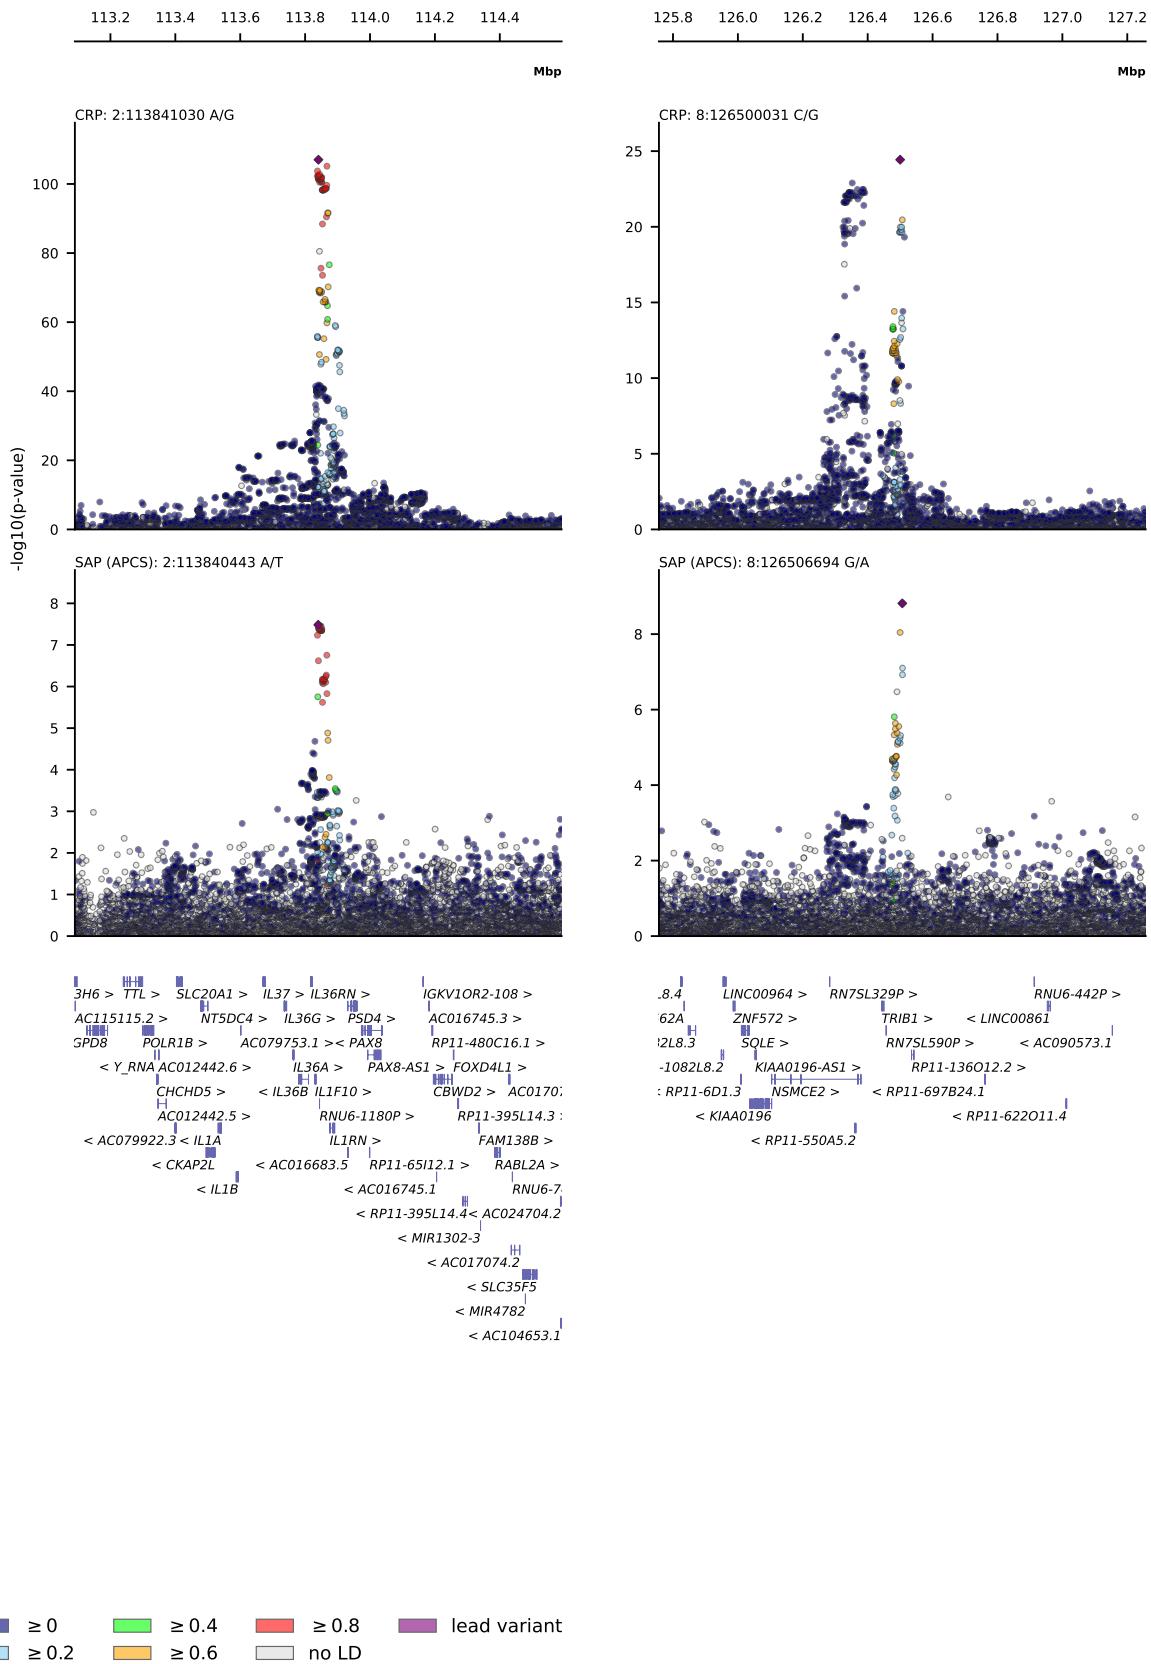

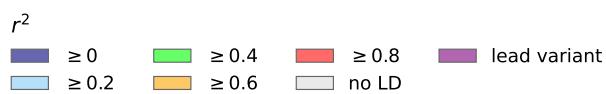

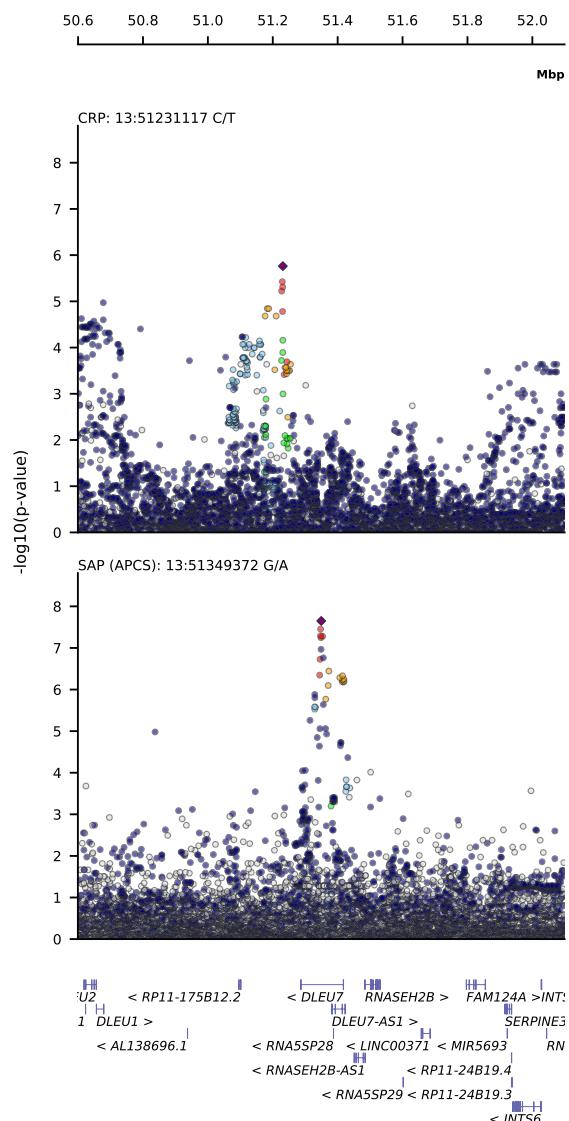

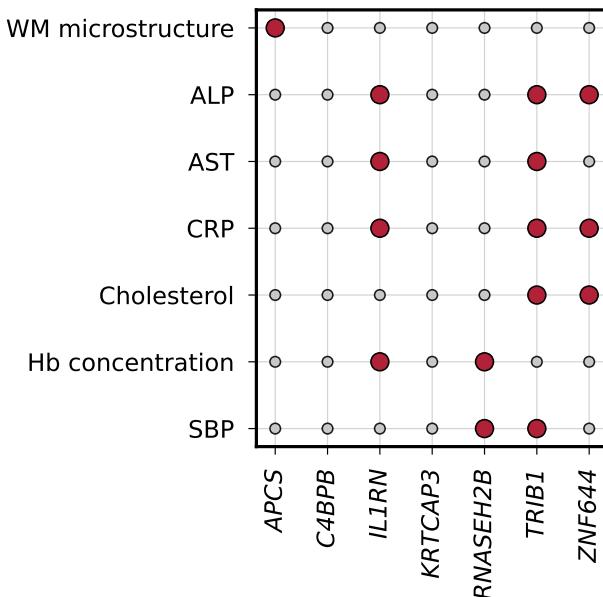

$r^2$

$\geq 0$	$\geq 0.4$	$\geq 0.8$	lead variant
$\geq 0.2$	$\geq 0.6$	no LD	

**Figure S3:** GWAS findings for the 'author assigned genes' reported by GWAS Catalog, showing all traits assigned to AP-CS and traits reported for 2 or more of the trans signals. Abbreviations: WM, white matter; Hb, blood haemoglobin concentration; SBP, systolic blood pressure; plasma concentrations of ALP, alkaline phosphatase; AST, aspartate transaminase; CRP, C-reactive protein. Table S9 shows the complete GWAS Catalog look-up.

**Table S1:** Lead variants for plasma serum amyloid P component (SAP) value based on a meta-analysis GWAS in 44,288 subjects. Lead variants from a *trans*-region, defined as a signal beyond +/-2MB with respect to *APCS*, were mapped to putative causal genes using Open Target's 'v2g' pipeline. The provided genetic information is based on genomic build 37.
