

Supplementary Figure 1

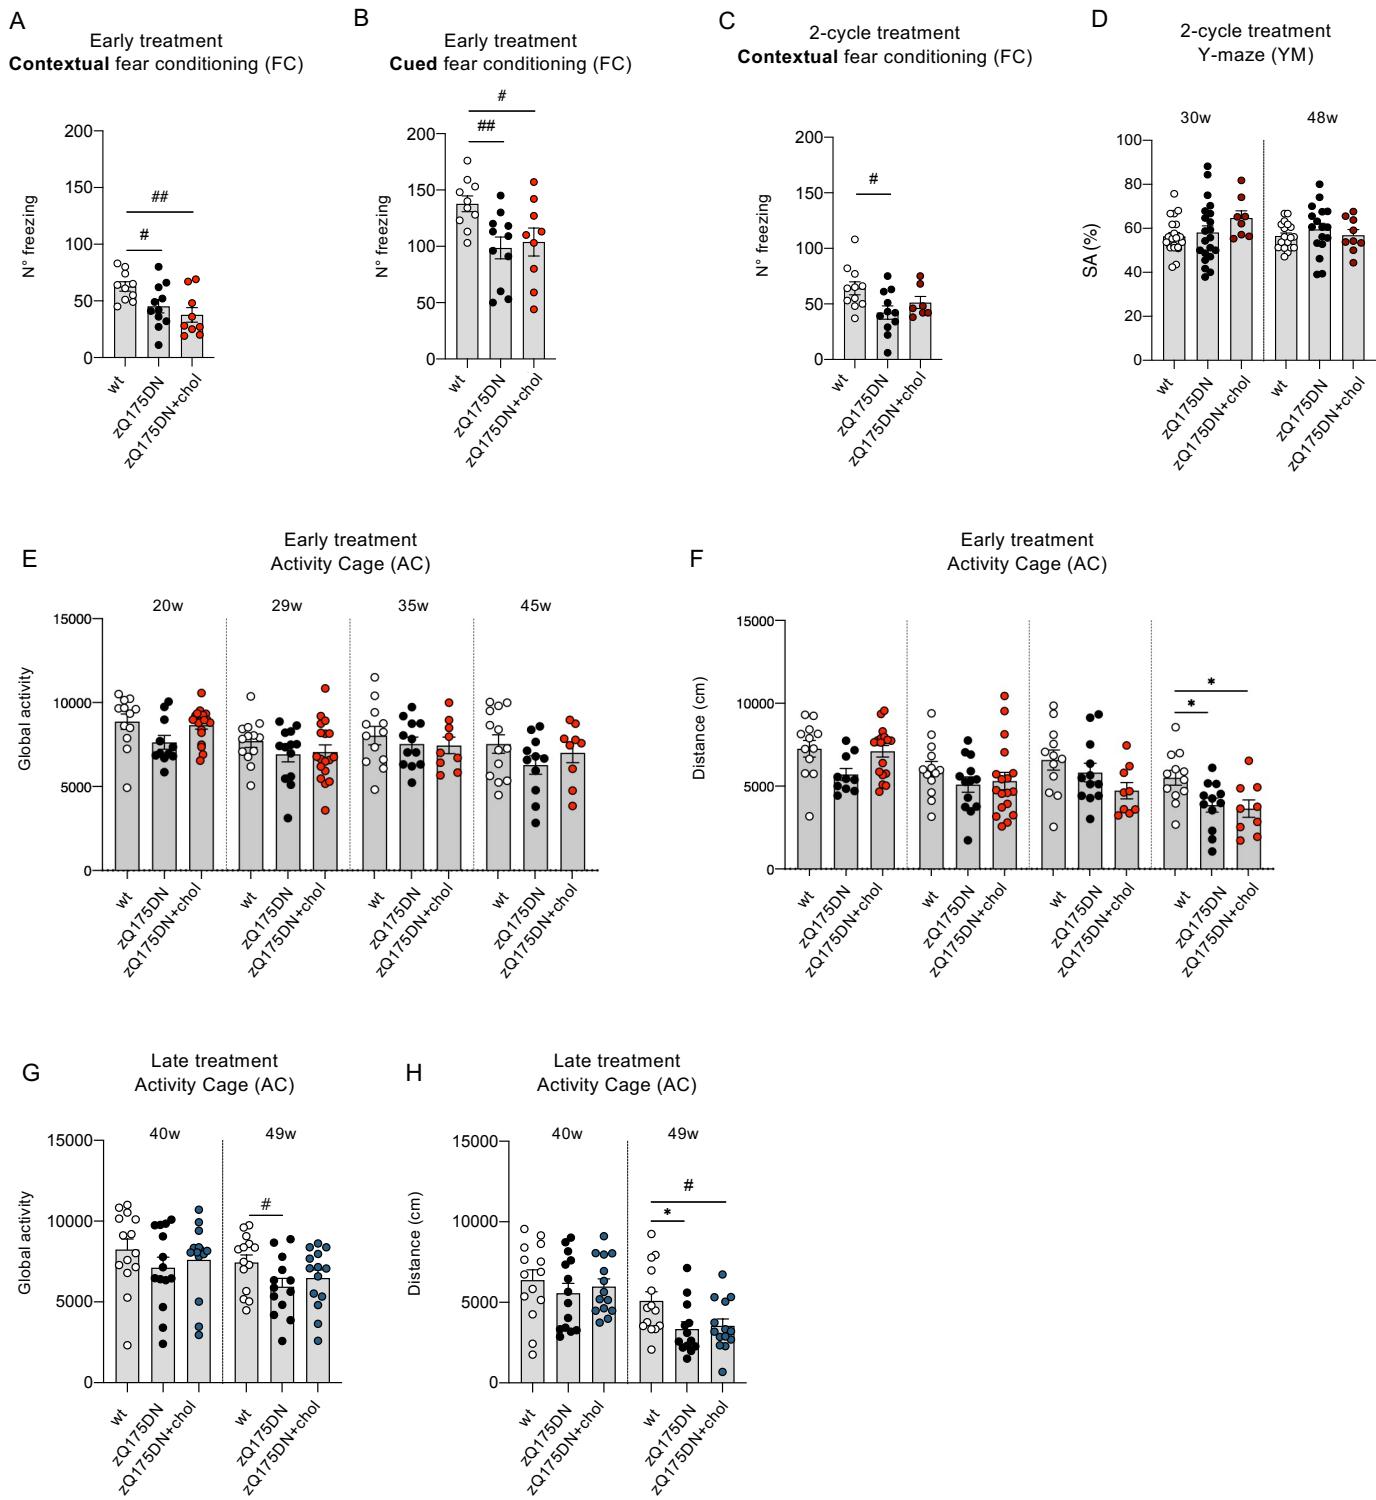

Supplementary Figure 1. Cholesterol release and quantification by hybrid-g7-NPs-chol in wt mice over time.

A Experimental paradigm: wt mice ($N = 4/\text{time point}$) were treated with a single ip injection of Cy5-hybrid-g7-NPs-bodipy-chol and sacrificed at different time points. Brains were collected for the analysis.

B–C Representative confocal images of brain slices (striatum in B, cortex in C) from wt mice after ip injection of hybrid-Cy5-g7-NPs-bodipy-chol sacrificed after 24 h, 2 weeks, 10 weeks or 20 weeks and relative co-localization of bodipy-chol and g7-NPs. Hoechst was used to counterstain nuclei (Ho, blue). Scale bar is 50 μm .

D Experimental paradigm: wt mice ($N = 4/\text{time point}$) were treated with a single ip injection of hybrid-g7-NPs-d6-chol and sacrificed at different time points. Different cerebral regions were collected for mass spectrometry analysis.

Supplementary Figure 2

Supplementary Figure 2. Cognitive and motor abilities of zQ175DN mice after the different treatments.

A-B N° of freezing in the fear conditioning (FC) test in the contextual (A) and cued paradigm (B) from the “early treatment” at 48 weeks of age.

C N° of freezing in the fear conditioning (FC) test in the contextual paradigm from the “2-cycle treatment” at 48 weeks of age.

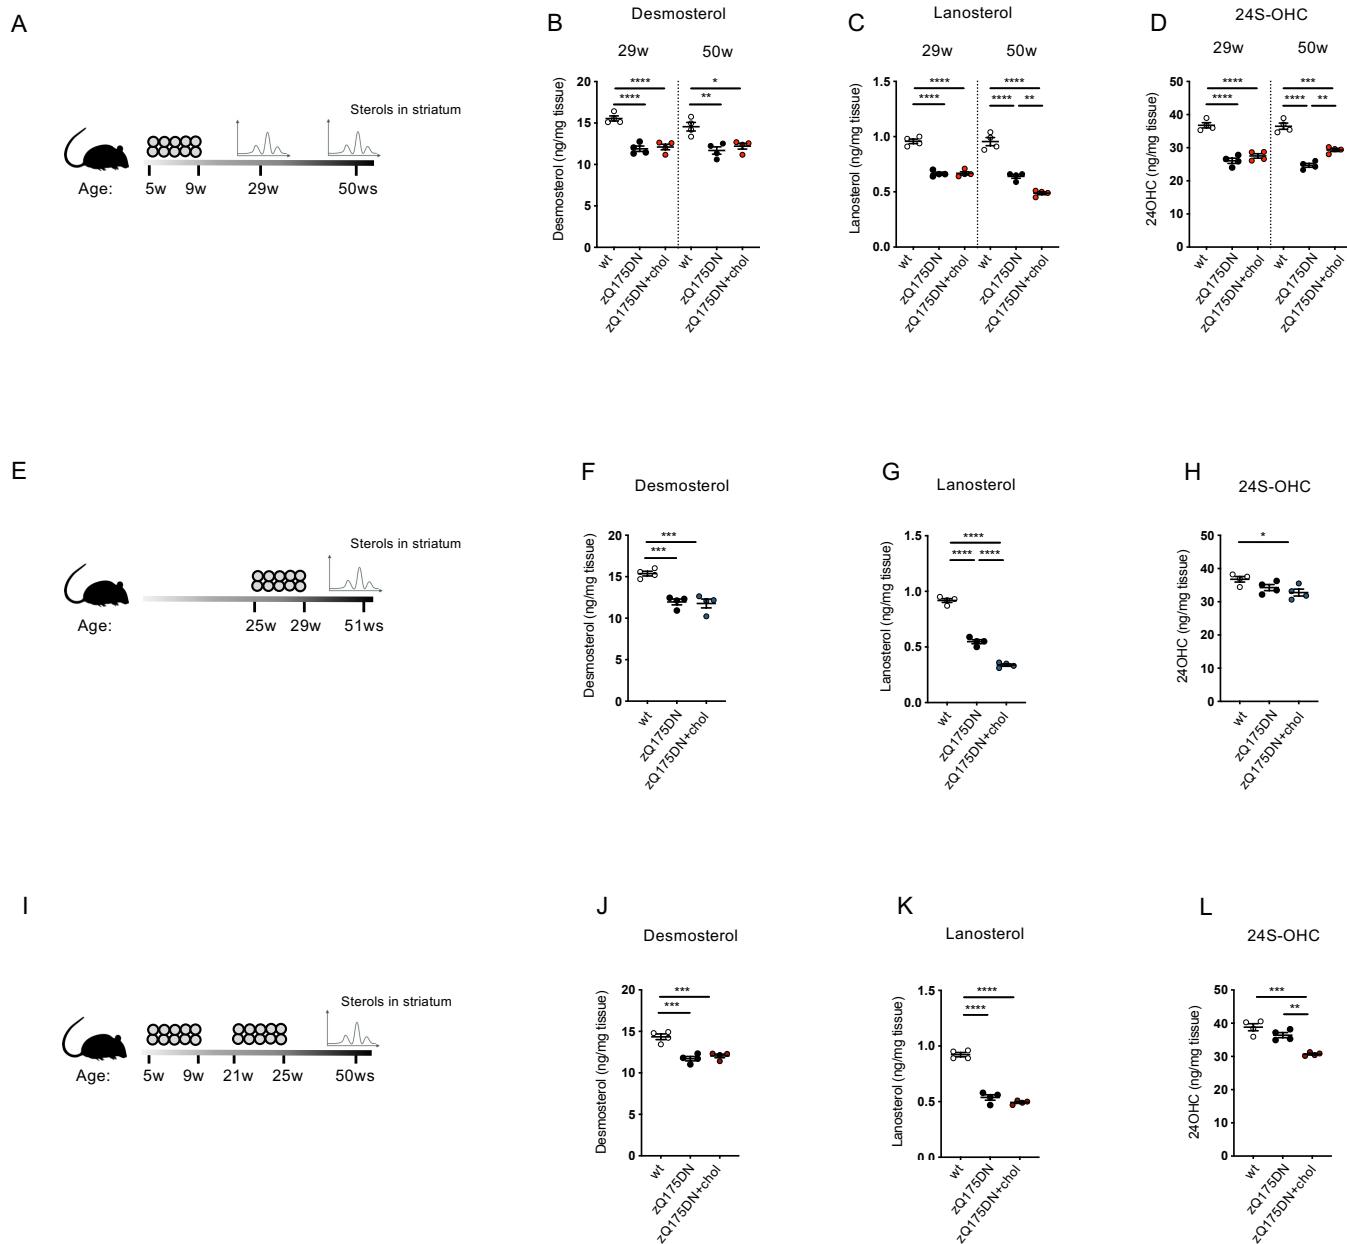

D Y-maze (YM) test from the “2-cycle treatment” at 30-48 weeks of age. Spontaneous alternation (SA) was calculated by dividing the n° of alternations by n° of possible triads x 100.

E-F Global motor activity (E) and total distance traveled (in cm) (F) in an Activity Cage (AC) test from the “early treatment”.

G-H Global motor activity (G) and total distance traveled (in cm) (H) in an Activity Cage (AC) test from the “late treatment”.

Data information: data in A–H are shown as scatterplot graphs with mean±SEM. Each dot corresponds to the value obtained from each animal. Statistics: one-way ANOVA with Tukey post-hoc test (*p<0.05); Student’s t-test (#p<0.05; ##p<0.01).

Supplementary Figure 3

Supplementary Figure 3. Sterols in the striatum of zQ175DN mice after the different treatments.

A-D Mass spectrometry analysis performed in the striatum from the “early treatment” ($N = 4$ mice/group).

Scheme of the treatment (A); level of desmosterol (B), lanosterol (C), and 24S-OHC (D) in the striatum at 29 and 50 weeks.

E-H Mass spectrometry analysis performed in the striatum from the “late treatment” ($N = 4$ mice/group).

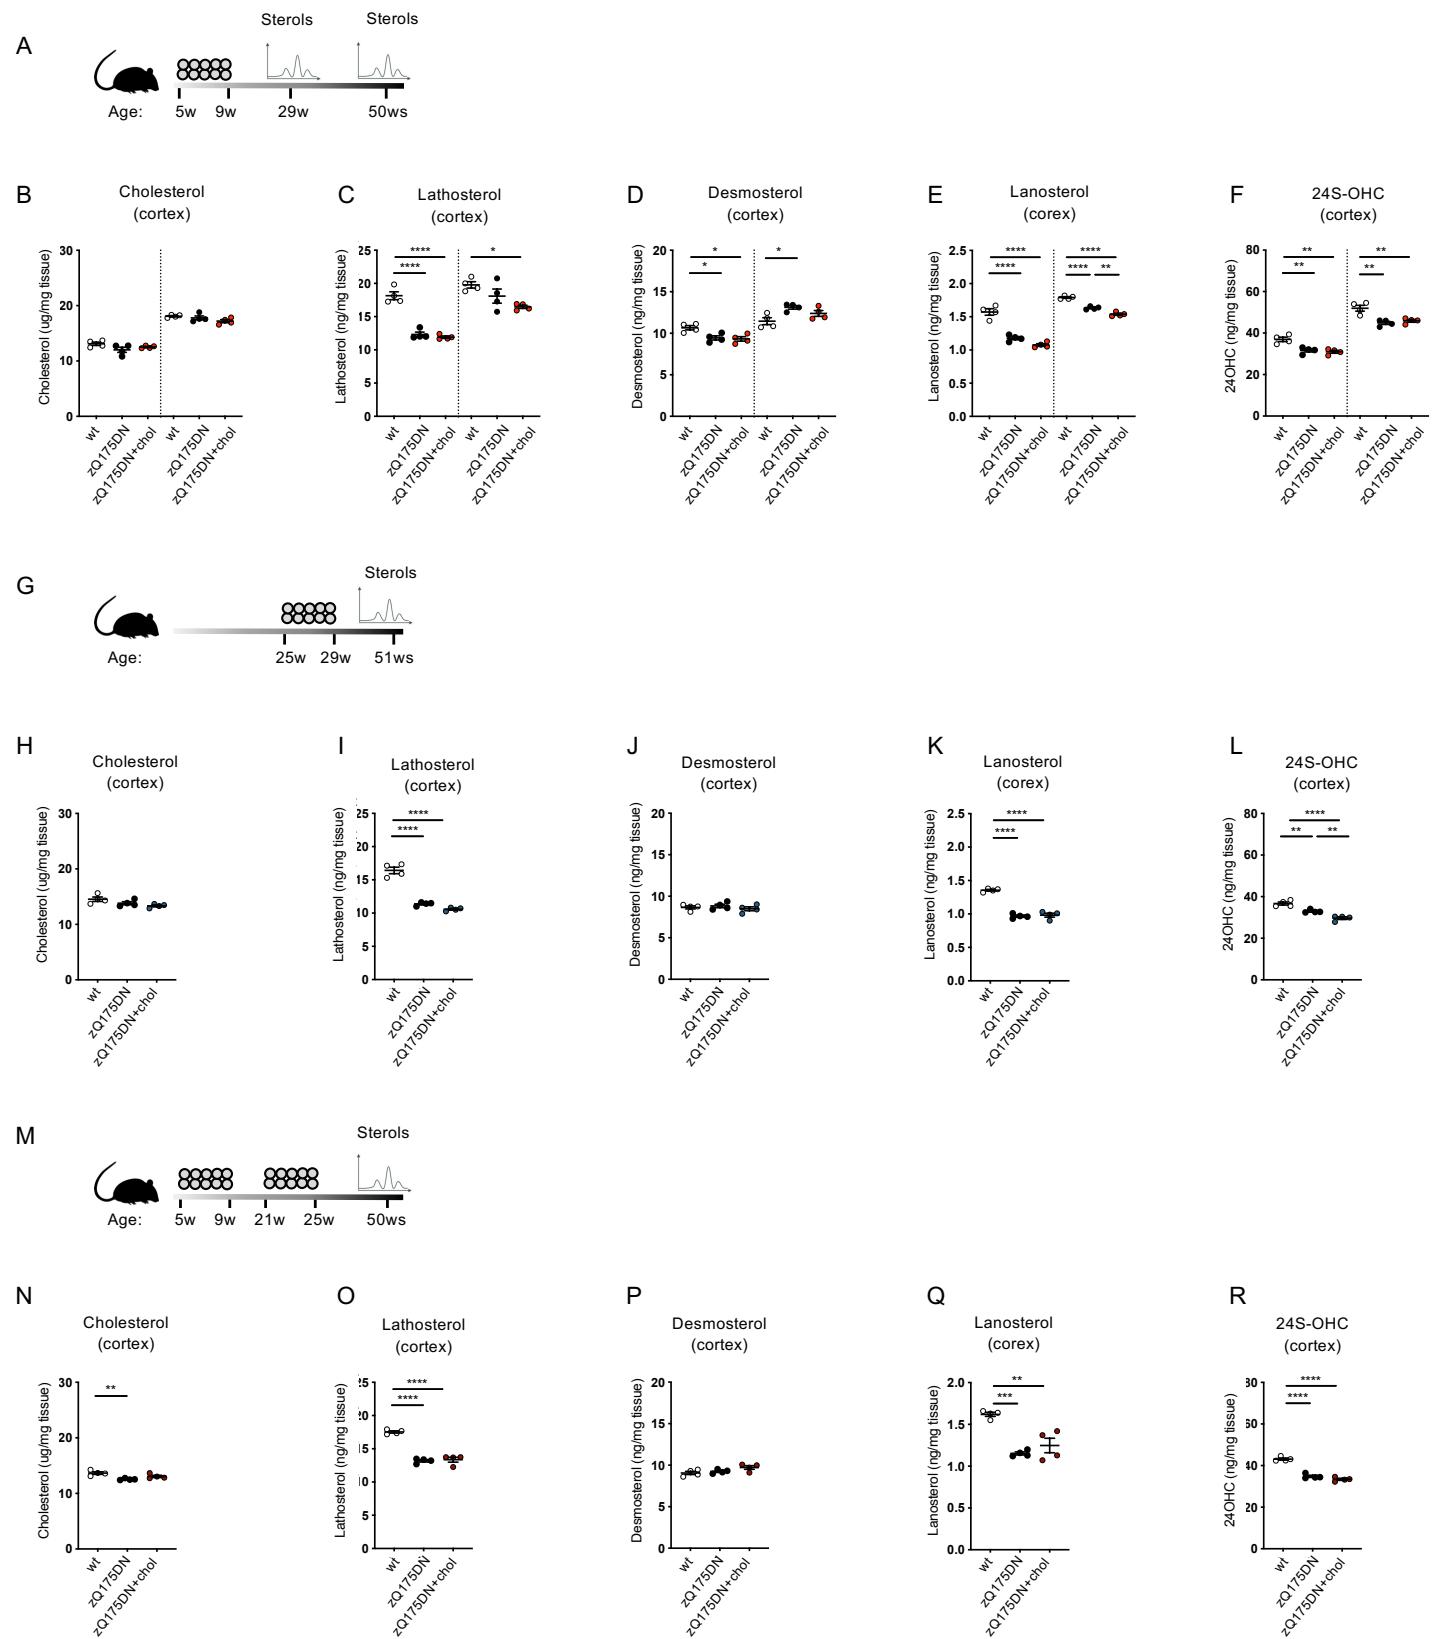

Scheme of the treatment (E); level of desmosterol (F), lanosterol (G), and 24S-OHC (H) in the striatum at 51 weeks.

I-L Mass spectrometry analysis performed in the striatum from the “2-cycle treatment” ($N = 4$ mice/group).

Scheme of the treatment (I); levels of desmosterol (J), lanosterol (K), and 24S-OHC (L) in the striatum at 50 weeks.

Data information: data in B-D, F-H, and J-L are shown as scatterplot graphs with mean \pm SEM. Each dot corresponds to the value obtained from each animal. Statistics: one-way ANOVA with Tukey post-hoc test (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$).

Supplementary Figure 4

Supplementary Figure 4. Sterols in the cortex of zQ175DN mice after the different treatments.

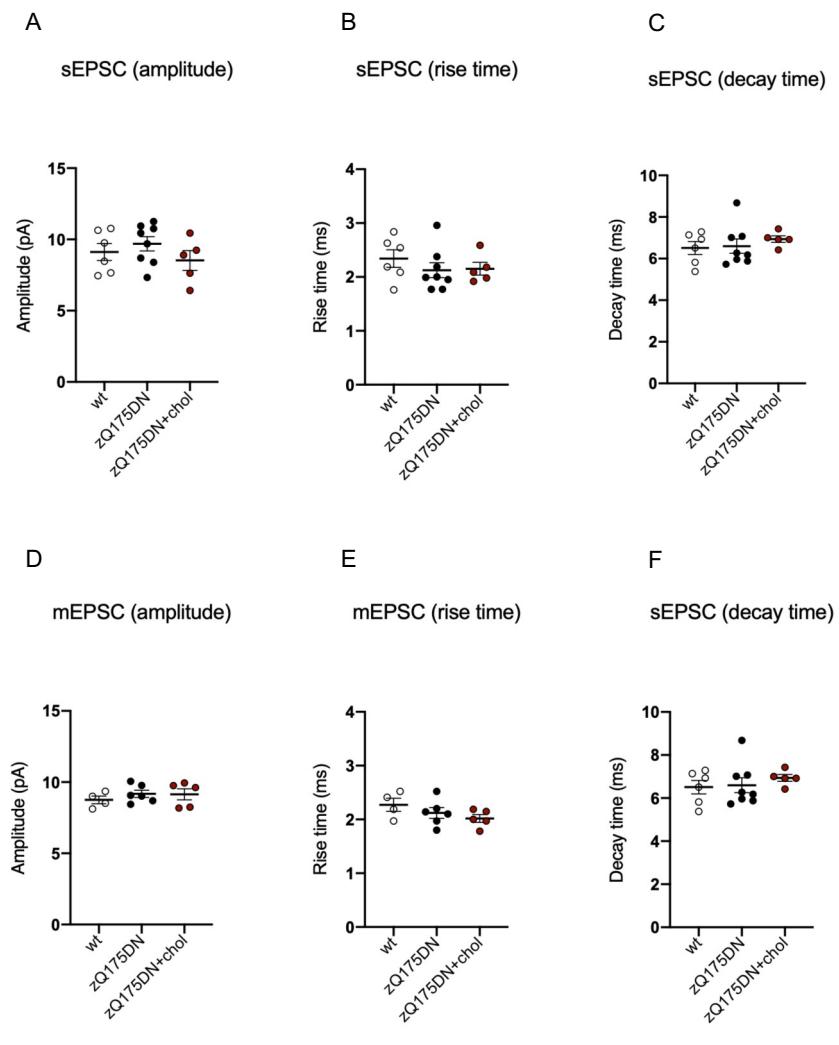

A-F Mass spectrometry analysis performed in the cortex from the “early treatment” ($N = 4$ mice/group). Scheme of the treatment (A); level of cholesterol (B), lathosterol (C), desmosterol (D), lanosterol (E), and 24-hydroxycholesterol (F) in the cortex at 29 and 50 weeks.

G-L Mass spectrometry analysis performed in the cortex from the “late treatment” ($N = 4$ mice/group). Scheme of the treatment (G); levels of cholesterol (H), lathosterol (I), desmosterol (J), lanosterol (K), and 24S-OHC (L) in the cortex at 51 weeks.

M-R Mass spectrometry analysis performed in the cortex from the “2-cycle treatment” ($N = 4$ mice/group). Scheme of the treatment (M); level of cholesterol (N), lathosterol (O), desmosterol (P), lanosterol (Q), and 24S-OHC (R) in the cortex at 50 weeks.

Data information: data in B-F, H-L, and N-R are shown as scatterplot graphs with mean \pm SEM. Each dot corresponds to the value obtained from each animal. Statistics: one-way ANOVA with Tukey post-hoc test (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$).

Supplementary Figure 5

Supplementary Figure 5. Electrophysiological features of MSNs from zQ175DN mice after the “2-cycle treatment”.

A-F Average amplitude, rise time, and decay time of sEPSCs (A-C) and mEPSCs (D-F) recorded from MSNs of wt (6 cells from $N = 3$ mice), zQ175DN (8 cells from $N = 4$ mice) and zQ175DN+chol mice (5 cells from $N = 3$ mice).

Data information: data in A-F are shown as scatterplot graphs with mean \pm SEM. Each dot corresponds to the value obtained from each cell.

Supplementary Table 1

Level of d6-chol in striatum, cortex, cerebellum, liver, lung, kidney, and plasma measured by LC-MS ($N = 3/\text{group}$).

Data information: data are expressed as mean \pm SEM. Red boxes highlight values measured at 10 and 20 weeks after ip injection in each tissue. Data indicated with * were previously published (Birolini et al., JCR 2021).

Tissue	30'*	6h *	24h *	1w *	2w *	10w	20w

Supplementary Table 8

Summary of gross and histological lesions of wt and HD mice following systemic and chronic injection of hybrid g7-NPs-chol (“2-cycle treatment”, $N = 5\text{-}6/\text{group}$).

	wt	zQ175DN	zQ175DN+chol
Heart, myocardial mineralizations	1/6	2/6	0/5
Lung, perivascular/peribronchial lymphoplasmacytic infiltrate	6/6	4/6	5/5
Lung, acidophilic macrophage pneumonia	3/6	3/6	5/5
Testes, residual bodies	2/4	3/3	3/3
Uterus, cystic endometrial hyperplasia	2/2	3/3	2/2
Ovary, periovaric lymphocytic infiltrates	0/2	2/3	1/2
Liver, multifocal neutrophilic and lymphoplasmacytic infiltrate	6/6	5/6	4/5
Kidney, hydronephrosis	1/6	0/6	0/5
Kidney, polycystic	1/6	0/6	0/5
Kidney, peripelvic lymphoplasmacytic infiltrates	5/6	4/6	3/5
Kidney, interstitial lymphoplasmacytic infiltrates	3/6	1/6	0/5
Kidney, intratubular hyaline casts	1/6	4/6	2/5
Spleen, white pulp hyperplasia	5/6	6/6	4/5
Spleen, hemosiderosis	2/6	2/6	2/5
Spleen, extramedullary hematopoiesis	3/6	3/6	3/5
Salivary glands, lymphoplasmacytic infiltrates	5/6	6/6	5/5
Lymph nodes, hyperplasia	4/6	6/6	2/5
Lymph nodes, sinus histiocytosis	3/6	5/6	3/5

Supplementary Table 9

Foreign body granuloma analysis of HD mice following systemic and chronic injection of hybrid g7-NPs-chol for all the treatments.

Type of NPs	N° of IP injections	Weeks after the last IP	N° of nodules	Concretions diameter
g7-hybrid-NPs	10	20	1 (not in all mice)	1-2 mm
g7-hybrid-NPs	10	40	1-2 (not in all mice)	1-2 mm
g7-hybrid-NPs	10 + 10 (2 cycles)	20	5-6 (in all mice)	2-3 mm
