STROBE Statement—checklist of items that should be included in reports of observational studies

	Item No.	Recommendation	Page No.	Relevant text from manuscript
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	1	
		(b) Provide in the abstract an informative and balanced summary of what was done and what was	1	
		found		
Introduction				
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported	1-2	
Objectives	3	State specific objectives, including any prespecified hypotheses	1-2	
Methods				
Study design	4	Present key elements of study design early in the paper	2-3	
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure,	2-5	
		follow-up, and data collection		
Participants	6	(a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of	(A) Patients	clinically suspected of AMI
		participants. Describe methods of follow-up	will be s	creened for inclusion at one of
		Case-control study—Give the eligibility criteria, and the sources and methods of case	the part	icipating centres. All study
		ascertainment and control selection. Give the rationale for the choice of cases and controls	participa	nts must fulfil the study
		Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of	inclusion	criteria and will be excluded
		participants	from pa	articipation if they cannot
			provide v	written informed consent or do
			not fulfi	l the inclusion criteria (Text
			Box 1: Ir	nclusion and exclusion criteria).
			Patient	are eligible for study
			participa	tion if they have a clinically
			suspicion	of AMI, which is based on (1)
			the clinic	cal manifestation of the disease,
			(2) phys	ical examination by the local
			physician	n, (3) laboratory measurements
			and (4) ti	he physician's consideration to
			perform	a CT(A)-scan. If all criteria are

			met, the physician will contact the local
			research team and the patient or legal
			representative will be asked for
			informed consent to participate in the
			study. Clinical study procedures are
			initiated when all criteria are met and
			informed consent is obtained from the
			patient or legal representative. After
			inclusion, blood and exhaled breath will
			be collected at consecutive time points
		(b) Cohort study—For matched studies, give matching criteria and number of exposed and	
		unexposed	
		Case-control study—For matched studies, give matching criteria and the number of controls per	
		case	
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers.	2-5
		Give diagnostic criteria, if applicable	
Data sources/	8*	For each variable of interest, give sources of data and details of methods of assessment	2-5
measurement		(measurement). Describe comparability of assessment methods if there is more than one group	
Bias	9	Describe any efforts to address potential sources of bias	2-5
Study size	10	Explain how the study size was arrived at	5

Continued on next page

Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	5
Statistical	12	(a) Describe all statistical methods, including those used to control for confounding	5
methods		(b) Describe any methods used to examine subgroups and interactions	5
		(c) Explain how missing data were addressed	5
		(d) Cohort study—If applicable, explain how loss to follow-up was addressed	5
		Case-control study—If applicable, explain how matching of cases and controls was addressed	
		Cross-sectional study—If applicable, describe analytical methods taking account of sampling	
		strategy	
		(\underline{e}) Describe any sensitivity analyses	5
Results			
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined	2-5
		for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	
		(b) Give reasons for non-participation at each stage	4,5
		(c) Consider use of a flow diagram	N.A.
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on	N.A.
		exposures and potential confounders	
		(b) Indicate number of participants with missing data for each variable of interest	N.A.
		(c) Cohort study—Summarise follow-up time (eg, average and total amount)	3-4
Outcome data	15*	Cohort study—Report numbers of outcome events or summary measures over time	3-4
		Case-control study—Report numbers in each exposure category, or summary measures of exposure	
		Cross-sectional study—Report numbers of outcome events or summary measures	
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision	N.A.
		(eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were	
		included	
		(b) Report category boundaries when continuous variables were categorized	N.A.
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time	N.A.
		period

Supplemental material

Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	N.A.
Discussion			
Key results	18	Summarise key results with reference to study objectives	N.A.
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss	1
		both direction and magnitude of any potential bias	
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of	1
		analyses, results from similar studies, and other relevant evidence	
Generalisability	21	Discuss the generalisability (external validity) of the study results	1
Other informati	ion		
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the	6
		original study on which the present article is based	

^{*}Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
