

Supplement Table 1. Types of VTE present in an incident CAT event, based on underlying cancer type.

Cancer	PE	Proximal DVT	Distal DVT	Upper Extremity DVT	DVT NOS	Abdominal thrombosis	Intra-thoracic thrombosis	Cerebral Venous Thrombosis
Solid tumor	43%	16%	7%	12%	7%	24%	1%	0%
Gastrointestinal	32%	12%	5%	9%	5%	44%	1%	0%
Lung / Intrathoracic	63%	15%	7%	17%	5%	3%	4%	0%
Genitourinary	45%	23%	10%	9%	12%	13%	0%	0%
Gynecological	57%	22%	7%	9%	11%	7%	2%	0%
Breast	49%	12%	6%	25%	10%	5%	1%	0%
Other Solid	45%	23%	7%	12%	11%	10%	0%	1%
Hematologic	32%	18%	8%	34%	9%	7%	2%	0%
Lymphoma	33%	16%	7%	35%	8%	9%	3%	1%
Multiple Myeloma	33%	25%	15%	18%	15%	0%	0%	0%
Myeloid	28%	20%	7%	42%	7%	4%	3%	1%
Multiple Cancers	42%	21%	6%	19%	10%	14%	1%	1%

Note: Patients with an incident CAT event may have concurrent diagnoses of multiple VTE types, so percentages of VTE types are not mutually exclusive and total greater than 100%.

Abbreviations: VTE, venous thromboembolism; CAT, cancer-associated thrombosis; PE, pulmonary embolism; DVT, deep vein thrombosis; NOS, not otherwise specified
