

Supplementary Figure 2 – Association between baseline TILs and pCR in: 2a) the overall cohort and 2b) the cohort of patients receiving taxane-only neoadjuvant chemotherapy (plus anti-HER2 treatment).

Association between levels of RD-TILs and the likelihood of achieving pCR in the overall population (2a) and in the subgroup of patients receiving taxane-only chemotherapy as backbone for anti-HER2 treatment (2b).

Abbreviations: TILs, tumor infiltrating lymphocytes; NACT, neoadjuvant chemotherapy; pCR, pathologic complete response; RD, residual disease.
