¹Eligible for indicator; ²Achieve in current prison; ³Achieve in previous prison; ⁴Overall achievement - either current or previous prison; ⁵Declined indicator; ⁶Suppressed (<10) to avoid disclosure

The proportion of people with diabetes who have had the following in the preceding 12 months: body mass index, blood pressure, record of smoking status, foot examination, urine albumin: creatinine ratio blood tests for HbA1c, cholesterol and serum creatinine

68.01% of those without moderate or severe frailty have BP of 140/80 or less, 56.66% of those without moderate or severe frailty have HbA1c of 58 or less, 83.34% of those with moderate or severe frailty have HbA1c of 75 or less, 78.04% had foot examination with risk classification. No comparisons for other examinations.

Group: Diabetes, Asthma & Epilepsy Care

¹Eligible for indicator; ²Achieve in current prison; ³Achieve in previous prison; ⁴Overall achievement - either current or previous prison; ⁵Declined indicator; ⁶Suppressed (<10) to avoid disclosure

The proportion of people with a new diagnosis of any form of dementia in the reporting year, and who have a record of the following blood tests between 12 months before and 6 months after the date of diagnosis: full blood count, calcium, glucose and/or HbA1C, urea and electrolytes, liver function, thyroid function, serum vitamin B12, folate levels

no comparable data in QOF 2019/20. Most recent QOF data was from 2018/19 and achievement was 70.01%

¹Eligible for indicator; ²Achieve in current prison; ³Achieve in previous prison; ⁴Overall achievement - either current or previous prison; ⁵Declined indicator; ⁶Suppressed (<10) to avoid disclosure

Indicator

The proportion of prison population prescribed opioids in the preceding 8 weeks from 31st March

Group: Prison specific

no comparable data in QOF 2019/20 data. Foy et al: 12.8% of all adult patients prescribed an opioid at least once; 6.6% of the sample were prescribed stronger opioids, or 0.85% of adults; For patients prescribed any opioids, the proportion prescribed stronger opioids was 13.7%.

Variable	Population	All prison population			Any mental health diagnosis		All prison population AND NO coded diagnosis of neuropathic pain	
		Prescribed any opioid in the preceding 8 weeks from 31st March (% popln)	Prescribed any strong opioid in the preceding 8 weeks from 31st March (% popln)	Prescribed benzodiazepines AND any opioid in the preceding 8 weeks from 31st March (% popln)	Eligible (% popln)	Prescribed any opioid in the preceding 8 weeks from 31st March (% eligible)	Eligible (% popln)	Prescribed pregabalin OR gabapentin in the preceding 8 weeks from 31st March (% eligible)

¹Eligible for indicator; ²Achieve in current prison; ³Achieve in previous prison; ⁴Overall achievement - either current or previous prison; ⁵Declined indicator; ⁶Suppressed (<10) to avoid disclosure

Indicator		The proportion of prison population prescribed opioids in the preceding 8 weeks from 31st March							
Group: Prison specific		All prison population			Any mental health diagnosis		All prison population AND NO coded diagnosis of neuropathic pain		
Variable	Population	Prescribed any opioid in the preceding 8 weeks from 31st March (% popln)	Prescribed any strong opioid in the preceding 8 weeks from 31st March (% popln)	Prescribed benzodiazepines AND any opioid in the preceding 8 weeks from 31st March (% popln)	Eligible (% popln)	Prescribed any opioid in the preceding 8 weeks from 31st March (% eligible)	Eligible (% popln)	Prescribed pregabalin OR gabapentin in the preceding 8 weeks from 31st March (% eligible)	
<i>no comparable data in QOF 2019/20 data. Foy et al: 12.8% of all adult patients prescribed an opioid at least once; 6.6% of the sample were prescribed stronger opioids, or 0.85% of adults; For patients prescribed any opioids, the proportion prescribed stronger opioids was 13.7%.</i>

Indicator	The percentage of patients with diabetes who have had the following care processes performed in the preceding 12 months: BMI measurement; BP measurement; HbA1c measurement; Cholesterol measurement; Record of smoking status; Foot examination; Albumin: creatinine ratio; Serum creatinine measurement													
	Group: Diabetes, Asthma & Epilepsy Care													
Variable	BMI	HbA1c	Cholesterol	Univariate: Odds ratios (95% CI)			Serum Creatinine	BP	Foot Exam					
				Smoking Status	Albumin: Creatinine Ratio

Indicator																	
Domain: Mental health																	
The proportion of people who have received three or more prescriptions for an antipsychotic in the preceding 12 months, and who have a record of blood testing (fasting glucose, HbA1c, lipid profile, urea and electrolytes, full blood count, liver function test), body mass index and blood pressure																	
Variable	Fasting glucose		HbA1c		Lipid profile		Urea and electrolytes		Full blood count		Liver function		BMI		Blood Pressure		
	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)	OR (95% CI)	Probability of achieving indicator (95% CI)

Supplementary section 4. Comparisons with achievement in community settings

Study indicator	Study achievement 2019-20 (%)	Community indicator ^a	Community achievement (England) (%)
Long-term conditions			
Blood pressure control in diabetes: proportion of the prison population with diabetes whose most recent blood pressure was \leq 140/80 mmHg in the last 12 months	261 of 770 eligible people (33.9%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with diabetes, on the register, without moderate or severe frailty in whom the last blood pressure reading (measured in the preceding 12 months) is 140/80 mmHg or less	68.01%(1)
Processes of care for diabetes: proportion of the prison population with diabetes who have had \geq five of these measurements in the preceding 12 months: body mass index, blood pressure, record of smoking status, foot examination, urine albumin: creatinine ratio, blood tests for HbA1c, cholesterol, creatinine	426 of 770 eligible people (55.3%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with diabetes, on the register, with a record of a foot examination and risk classification within the preceding 12 months	78.04%(1)
Glycaemic control for diabetes: proportion of the prison population with diabetes and without moderate or severe frailty, whose most recent HbA1c was \leq 58 mmol/mol in the last 12 months	260 of 756 eligible people (34.4%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with diabetes, on the register, without moderate or severe frailty in whom the last IFCC-HbA1c is 58 mmol/mol or less in the preceding 12 months	56.66%(1)
Glycaemic control for diabetes with frailty: proportion of the prison population with diabetes and moderate or severe frailty, whose most recent HbA1c was \leq 75 mmol/mol in the last 12 months	9 of 14 eligible people (64.3%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with diabetes, on the register, with moderate or severe frailty in whom the last IFCC-HbA1c is 75 mmol/mol or less in the preceding 12 months	83.34%(1)
Asthma review: proportion of the prison population with asthma who had an asthma review in the last 12 months that included an assessment of asthma control	136 of 4,459 eligible people (3.1%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with asthma, on the register, who have had an asthma review in the preceding 12 months that includes an assessment of asthma control using the 3 Royal College of Physicians questions	67.14%(1)
Epilepsy review and control: proportion of the prison population with epilepsy and prescribed antiepileptic drug(s), that had an annual review and were seizure free in the last 12 months	Annual review: 5 of 419 eligible people (1.2%) Seizure free: 1 of 419 eligible people (<1.00%)	Quality and Outcomes Framework, 2013-14: The percentage of patients aged 18 or over on drug treatment for epilepsy who have been seizure free for the last 12 months, recorded in the preceding 12 months	57.50%(2)
Secondary prevention of stroke: proportion of the prison population with transient ischaemic attack or stroke (excluding haemorrhagic stroke), prescribed an antiplatelet/anticoagulant in the last 12 months	51 of 86 eligible people (59.3%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with a stroke shown to be non-haemorrhagic, or a history of transient ischaemic attack, who have a record in the preceding 12 months that an antiplatelet agent, or an anti-coagulant is being taken	91.01%(1)
Anticoagulation for atrial fibrillation: proportion of the prison population with persistent/paroxysmal atrial fibrillation and CHA2DS2-VASc score \geq two, with a prescription for warfarin/direct-acting oral anticoagulant in the last 12 months	45 of 54 eligible people (83.3%)	Quality and Outcomes Framework, 2019-20: In those patients with atrial fibrillation with a record of a CHA2DS2-VASc score of 2 or more, the percentage of patients who are currently treated with anti-coagulation drug therapy	87.26%(1)
Stroke risk assessment in atrial fibrillation: proportion of the prison population with persistent/paroxysmal atrial fibrillation, and a CHA2DS2-VASc score in the last 12 months	15 of 25 eligible people (60%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with atrial fibrillation in whom stroke risk has been assessed using the CHA2DS2-VASc score risk stratification scoring system in the preceding 12 months (excluding those patients with a previous CHADS2 or CHA2DS2-VASc score of 2 or more)	93.35%(1)

Study indicator	Study achievement 2019-20 (%)	Community indicator ^a	Community achievement (England) (%)
Long-term conditions			
Blood pressure control in people 79 years or under with cardiovascular disease: proportion of the prison population aged ≤ 79 years with coronary heart disease, hypertension, stroke, transient ischaemic attack or peripheral arterial disease, and without diabetes or chronic kidney disease, with blood pressure ≤ 140/90mmHg in the last 12 months	586 of 1,311 eligible people (44.7%)	Quality and Outcomes Framework, 2019-20: The percentage of patients aged 79 years or under, with coronary heart disease, in whom the last blood pressure reading (measured in the preceding 12 months) is 140/90 mmHg or less	77.77%(1)
Blood pressure control in people 80 years or over with cardiovascular disease: proportion of the prison population aged ≥ 80 years with coronary heart disease, hypertension, stroke, transient ischaemic attack or peripheral arterial disease, and without diabetes or chronic kidney disease, with blood pressure ≤ 150/90mmHg in the last 12 months	10 of 19 eligible people (52.6%)	Quality and Outcomes Framework, 2019-20: The percentage of patients aged 80 years or over, with coronary heart disease, in whom the last blood pressure reading (measured in the preceding 12 months) is 150/90 mmHg or less	86.50%(1)
Secondary prevention of myocardial infarction: proportion of the prison population with myocardial infarction, prescribed all of the following in the last 12 months: ACE-inhibitor/angiotensin receptor blocker, anti-platelet, beta-blocker and statin	0 of 492 eligible people (0%)	Quality and Outcomes Framework, 2014-15: The percentage of patients with a history of myocardial infarction (on or after 1 April 2011) currently treated with an ACE-inhibitor (or angiotensin receptor blocker if ACE-inhibitor intolerant), aspirin or an alternative anti-platelet therapy, beta-blocker and statin	69.06%(3)
Treatment of coronary heart disease: proportion of the prison population with coronary heart disease prescribed anti-platelet/anti-coagulant therapy in the last 12 months	360 of 494 eligible people (72.9%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with coronary heart disease with a record in the preceding 12 months that aspirin, an alternative anti-platelet therapy, or an anti-coagulant is being taken	90.87%(1)
Treatment of heart failure: proportion of the prison population with heart failure, prescribed an ACE-inhibitor/angiotensin receptor blocker in the last 12 months	62 of 98 eligible people (63.3%)	Quality and Outcomes Framework, 2019-20: In those patients with a current diagnosis of heart failure due to left ventricular systolic dysfunction, the percentage of patients who are currently treated with an ACE-inhibitor or angiotensin receptor blocker	81.95%(1)
Treatment of heart failure: proportion of the prison population with heart failure, prescribed an ACE-inhibitor/angiotensin receptor blocker and beta-blocker, in the last 12 months	49 of 61 eligible people (80.3%)	Quality and Outcomes Framework, 2019-20: In those patients with a current diagnosis of heart failure due to left ventricular systolic dysfunction who are currently treated with an ACE-inhibitor or angiotensin receptor blocker, the percentage of patients who are additionally currently treated with a beta-blocker licensed for heart failure	82.01%(1)

Study indicator	Study achievement 2019-20 (%)	Community indicator ^a	Community achievement (England) (%)
Screening			
Cervical screening age 25-49 years: proportion of women in prison eligible for cervical screening, aged 25-49 years, who had the test in the last three years and six months	1,145 of 1,796 eligible people (63.8%)	Quality and Outcomes Framework, 2019-20: The percentage of women eligible for screening and aged 25-49 years whose notes record that an adequate cervical screening test has been performed in the preceding 3 years and 6 months	71.48%(1)
Cervical screening age 50-64 years: proportion of women in prison eligible for cervical screening, aged 50-64 years, who had the test in the last five years and six months	159 of 259 eligible people (61.4%)	Quality and Outcomes Framework, 2019-20: The percentage of women eligible for screening and aged 50-64 years whose notes record that an adequate cervical screening test has been performed in the preceding 5 years and 6 months	77.64%(1)
Breast screening: proportion of women in prison eligible for breast screening, aged 50-70 years, who had the test in the last three years	59 of 179 eligible people (33%)	Breast Screening Programme 2017-18: uptake of invitations to screen for women age 50-70 years	70.5%(4)
Abdominal aortic aneurysm screening: proportion of men in prison eligible for abdominal aortic aneurysm screening, aged ≥ 65 years, who have had the test	241 of 540 eligible people (44.6%)	Abdominal aortic aneurysm screening 2014-15: uptake for initial screens. Data are for men turning 65 in the screening year.	79.5%(5)
Cardiovascular disease risk assessment: proportion of the prison population aged 45 to 74 years with cardiovascular disease risk assessment in the last 5 years: People with diagnoses of: coronary heart disease, chronic kidney disease, diabetes, hypertension, atrial fibrillation, transient ischaemic attack, familial hypercholesterolemia, heart failure, peripheral arterial disease, stroke or $\geq 20\%$ 10-year cardiovascular disease risk before the last 5 years, were excluded	353 of 1,183 eligible people (29.8%)	People taking up an NHS Health Check invite per year, England, 2019-20. The NHS Health Check programme aims to help prevent heart disease, stroke, diabetes and kidney disease. Everyone between the ages of 40 and 74, who has not already been diagnosed with one of these conditions, will be invited (once every five years) to have a check to assess their risk of heart disease, stroke, kidney disease and diabetes and will be given support and advice to help them reduce or manage that risk.	43.7%(6)
Mental illness			
Antipsychotic monitoring: proportion of the prison population with \geq three prescriptions for a first or second generation antipsychotic drug, and \geq five of these measurements in the preceding 12 months: body mass index, blood pressure, blood tests for fasting glucose and/or HbA1c, lipid profile, renal and liver function, full blood count	24 of 463 eligible people (5.2%)	Quality and Outcomes Framework, 2019-20: The percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a record of blood pressure and body mass index in the preceding 12 months	80.28% blood pressure 74.40% body mass index(1)
Diagnosis of dementia: proportion of the prison population with a new diagnosis of any form of dementia, and a record of \geq five of these blood tests 12 months before to 6 months after date of diagnosis: full blood count, calcium, glucose and/or HbA1C, renal and liver function, thyroid function, vitamin B12, folate	6 of 13 eligible people (46.2%)	Quality and Outcomes Framework, 2018-19: The percentage of patients with a new diagnosis of dementia recorded in the preceding 1 April to 31 March with a record of full blood count, calcium, glucose, renal and liver function, thyroid function tests, serum vitamin B12 and folate levels recorded between 12 months before or 6 months after entering on to the register	70.01%(7)
Communicable disease			
Influenza immunisation: proportion of the prison population with one or more of: coronary heart disease, stroke, transient ischemic attack, diabetes or chronic obstructive pulmonary disease, who received an influenza vaccination August to March	787 of 1,752 eligible people (44.9%)	Quality and Outcomes Framework, 2019-20: The percentage of patients who have had influenza immunisation in the preceding 1 August to 31 March	72.22% diabetes 74.22 transient ischaemic attack 77.33% coronary heart disease 77.44% chronic obstructive pulmonary disease(1)

Study indicator	Study achievement 2019-20 (%)	Community indicator ^a	Community achievement (England) (%)
Opioid and gabapentinoid prescribing			
Prescribed any opioid: proportion of the prison population prescribed any opioid during an eight-week period	2,957 of 25,811 eligible people (11.5%)	A record of four or more opioid prescriptions 2011-12	12.4%(8) ^b Long-term prescribing was associated with mental health problems (odds ratio 1.12, 1.03 to 1.23)
Prescribed any strong opioid: proportion of the prison population prescribed any strong opioid during an eight-week period	2,257 of 25,811 eligible people (8.7%)	A record of four or more opioid prescriptions 2011-12, and at least one prescription of a strong opioid at any time point (diamorphine, morphine, oxycodone, fentanyl, hydromorphone, buprenorphine (excluding preparations used for substance misuse), pentazocine, dipipanone and papaveretum)	0.85%(8) ^b Strong opioid prescribing was associated with mental health problems (odds ratio 1.23, 1.06 to 1.23)

^a We used results from comparable quality indicators employed in the community and public health data. Data from 2019-20 were used where available, corresponding to the final year of data collection in the study.

^b Data from West Yorkshire, England.
