However, some figures and Supplemental Material published in *EHP* articles may not conform to [508 standards](#) due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehp508@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

The Effect of Individual or Study-Wide Report-Back on Knowledge, Concern, and Exposure-Reducing Behaviors Related to Endocrine-Disrupting Chemicals

Katherine E. Boronow, Barbara Cohn, Laurie Havas, Marj Plumb, and Julia Green Brody

Table of Contents

Survey Questions

Table S1. Odds ratios from logistic regressions evaluating the interaction between race and education and correctly answering environmental health knowledge questions at baseline (n = 135).

Table S2. Multiple regression model evaluating the interaction between race and education and baseline environmental health knowledge index score (n = 135).

Table S3. Odds ratios from logistic regressions evaluating the interaction between education and race and concern about health effects of certain chemicals at baseline (n = 135).

Table S4. Frequency of performing exposure-related environmental health behaviors, before and after receiving report-back.

Figure S1. Selected screenshots from the interactive MyCHDSReport website sample report (<http://derbidemo.com>). Screenshots show the welcome page, summary of results page, PCBs chemical group page, PCBs results graphs, overall study results page (excerpted), and overview page for exposure reduction information. © 2014 Child Health and Development Studies, Silent Spring Institute.
