

Supplemental Figure: Subgroup analysis for patients with vs. without EVD.

The dichotomized subgroups showed a non-significant correlation ($R = -0.16$, 95% CI = -0.36-0.05, $p = 0.13$; left panel) for patients with EVD and for patients without EVD ($R = -0.18$, 95% CI = -0.44-0.12, $p = 0.23$; right panel). MAP = mean arterial pressure, ds = decisecond, MTT = mean transit time, R = Regression coefficient.
