Supplementary figures

Chemical space visualization using PCA

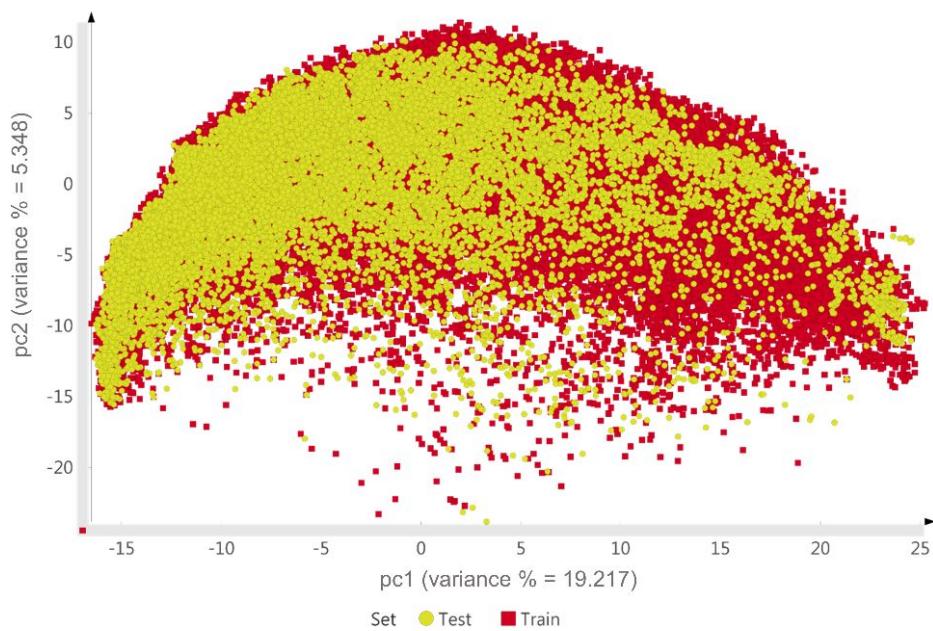

Figure S1. The chemical space visualization using PCA. Test set compounds were mostly mapped within the training set chemical space boundaries which confirms the prediction quality of the PCM and L-B model.

Scatter plot of PCA of screened drugs and active compounds of P14337 (dengue NS3 protein) from the training set

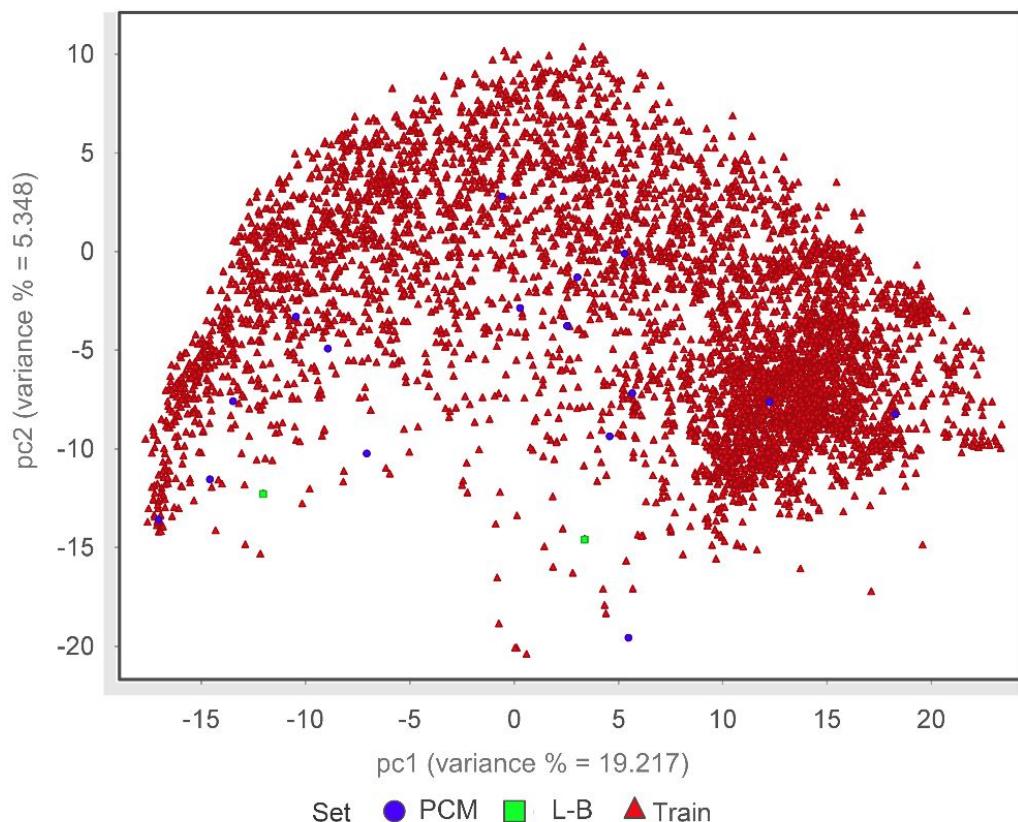

Figure S2. Scatter plot of PCA of screened drugs and active compounds of P14337

(dengue NS3 protein) from the training set. Drugs/substances which scored 0.99 from PCM model and ≥ 0.5 for L-B model were subjected to PCA to determine their position in the chemical space covered by the training set. Most of drugs predicted using PCM model (blue) lies within the training set boundaries, while the drugs predicted using the L-B model lies close to the compounds but not in the heavily populated area.
