ABSTRACT

Targeted amplicon sequencing to identify pathogens, resistance-conferring mutations, and strain types is an important tool in diagnosing and treating infections. However, due to the short read limitations of Illumina sequencing, many applications require the splitting of limited clinical samples between two reactions. Here, we outline single-tube hairpin Illumina sequencing PCR (*hisPCR*) which allows for the generation of overlapping amplicons containing Illumina indexes and adapters in a single tube, effectively extending the Illumina read length while maintaining reagent and sample input requirements.

*e.g., [i5] = A501 = TGAACCTT; [i7] = A701 = ATCACGAC

Lowercase bases are gene specific regions, change these if designing your own primer set

Stage 1 PCR

A	B
COMPONENT	Volume (μ l)
5X Q5 Reaction Buffer	10
5X Q5 High GC Buffer	10
10 mM dNTPs	1
Q5 High-Fidelity DNA Polymerase	0.5
10 μ M Forward primer 1	1
10 μ M Reverse primer 2	1
20 mg/ml BSA	5
Template DNA (~1ng/ μ l)	5
Nuclease-Free Water	18.5

The total volume is 50 μ l at this stage

A	B	C	D
Step	Temp (C)	Time (s)	Cycles
Denaturation	98	120	1
Denaturation	98	10	10
Annealing	64	15	
Extension	72	45	
Extension	4	Forever	1

Cycle parameters

As soon as the sample hits  4 °C, proceed to step 2.

Stage 2 PCR

- 2 Add the below into the reaction while at  4 °C and proceed to the second PCR cycling

A	B
COMPONENT	Volume (μ l)
10 μ M Forward primer 2	0.15
10 μ M Reverse primer 1	0.15

A	B
10µM Forward Illumina adapter primer	0.35
10µM Reverse Illumina adapter primer	0.35

The total volume is 51µL at this stage

A	B	C	D
Step	Temp (C)	Time (s)	Cycles
Denaturation	98	10	1
Denaturation	98	10	
Annealing	65	15	20
Extension	72	30	
Extension	72	120	1

Cycle parameters

Bead cleanup

- 3 Add $\text{40 } \mu\text{L}$ of resuspended AMPure XP beads to each reaction in a PCR tube 10m 30s
- Mix by pipetting 10x
- Incubate 00:05:00 at Room temperature
- Place on magnet
- Wash 2x with $\text{200 } \mu\text{L}$ freshly-prepared 70 \% (v/v) ethanol
- Air dry for 00:00:30 , don't allow the beads to become cracked
- Remove the tubes from the magnetic rack
- Add $\text{50 } \mu\text{L}$ 10 mM Tris-HCl pH 8.0 with 50 mM NaCl
- NOTE: The BSA in the reaction causes the beads to clump.
- Flick the tubes to partially resuspend the beads
- Mix by pipetting 10x
- Incubate 00:05:00 at Room temperature
- Place on the magnet, aspirate $\text{50 } \mu\text{L}$ of the eluant into a new tube
- Run $\text{10 } \mu\text{L}$ on a 0.8% agarose gel

Optional: Determine the proportion of amplicons with both ... 1m 50s

- 4** Dilute the cleaned up amplicons 1:100.
Make the master mix below using Illumina_quant_Inner primer set and a second master mix for Illumina_quant_Outer primer set.

A	B
COMPONENT	Volume (μ L)
PowerUp SYBR Green Master Mix (2X)	5
10 μ M Forward primer	0.5
10 μ M Reverse primer	0.5
Diluted amplicon	2
Nuclease-Free Water	2

qPCR master mix

Aliquot $\text{8 } \mu\text{L}$ to each well and add in $\text{2 } \mu\text{L}$ of the diluted amplicon.

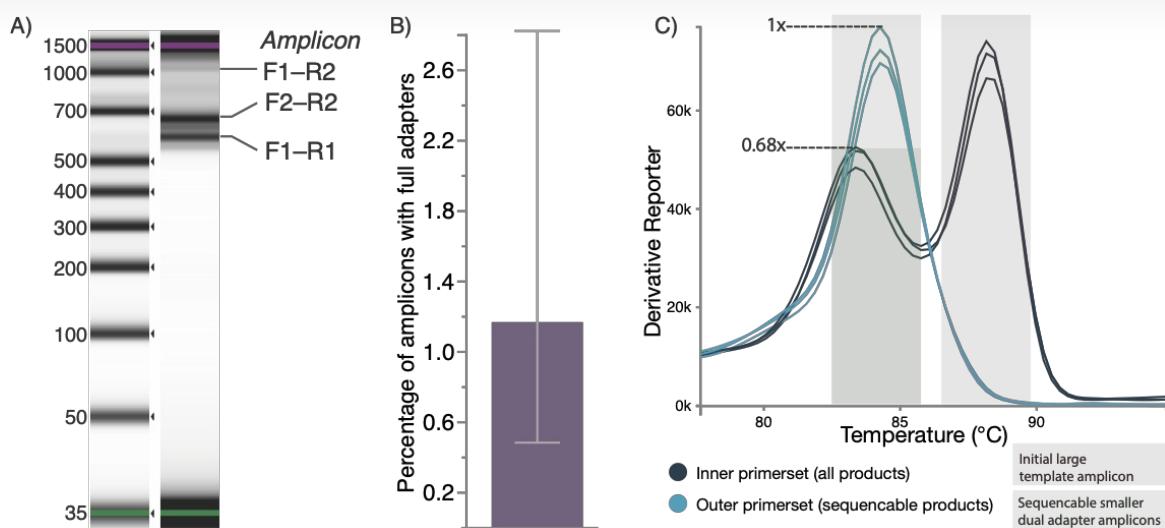

- 5**

A	B	C	D	E
Step	Temp (C)	Time (s)	Cycles	Ramp Rate (C/s)
UDG activation	50	120	1	2.73
Denaturation	95	120		2.73
Denaturation	95	1	1	2.73
Amplification	60	30		2.11
Capture	60	0	-	
Melt Curve	95	1	1	2.73
	60	20	1	2.11
	95	-	1	0.15
	Capture	-	1	-

Cycle parameters for QuantStudio 3

- 6** The ratio of the Illumina _quant_Inner primer set to the Illumina _quant_Outer primer set will give the proportion of the DNA in the tube that contain both Illumina adapters and is sequencable (use this for pooling). While the melt curve will provide information on the proportion of each amplicon in the sample.

Expected Result

A) hisPCR generated amplicons using two forward and two reverse overlapping primers in a single tube. Amplicons contain either no Illumina adapter, one Illumina adapter, or two Illumina adapters per amplicon. B) The relative proportion of amplicons in the sample containing both Illumina adapters. C) Melt curves showing the expected amplicons for each of the primer sets, and the ratio of amplicons containing both Illumina adapters.
