

Supplemental Material

Rivnak, A. J. et al. "A Fully-automated Six-Plex Single Molecule Immunoassay for Measuring Cytokines in Blood"

A

B

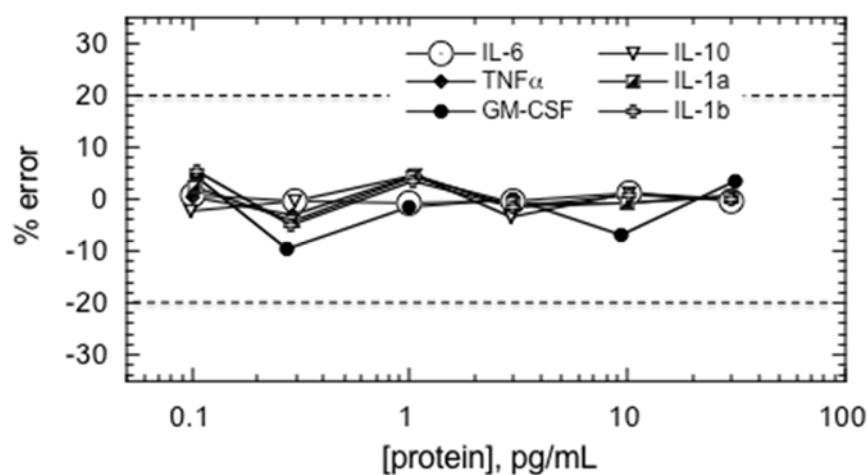

Figure S1. Plots of concentration of six cytokines spiked into bovine serum against: A) the imprecision (in %CV) in concentrations determined by reading back the calibrators off the calibration curve; and, B) the inaccuracy (in % error) in concentration value by reading back the calibrators off the calibration curve. These plots are based on the data from the three calibration runs presented in Figure 2 and Tables S1-S3.

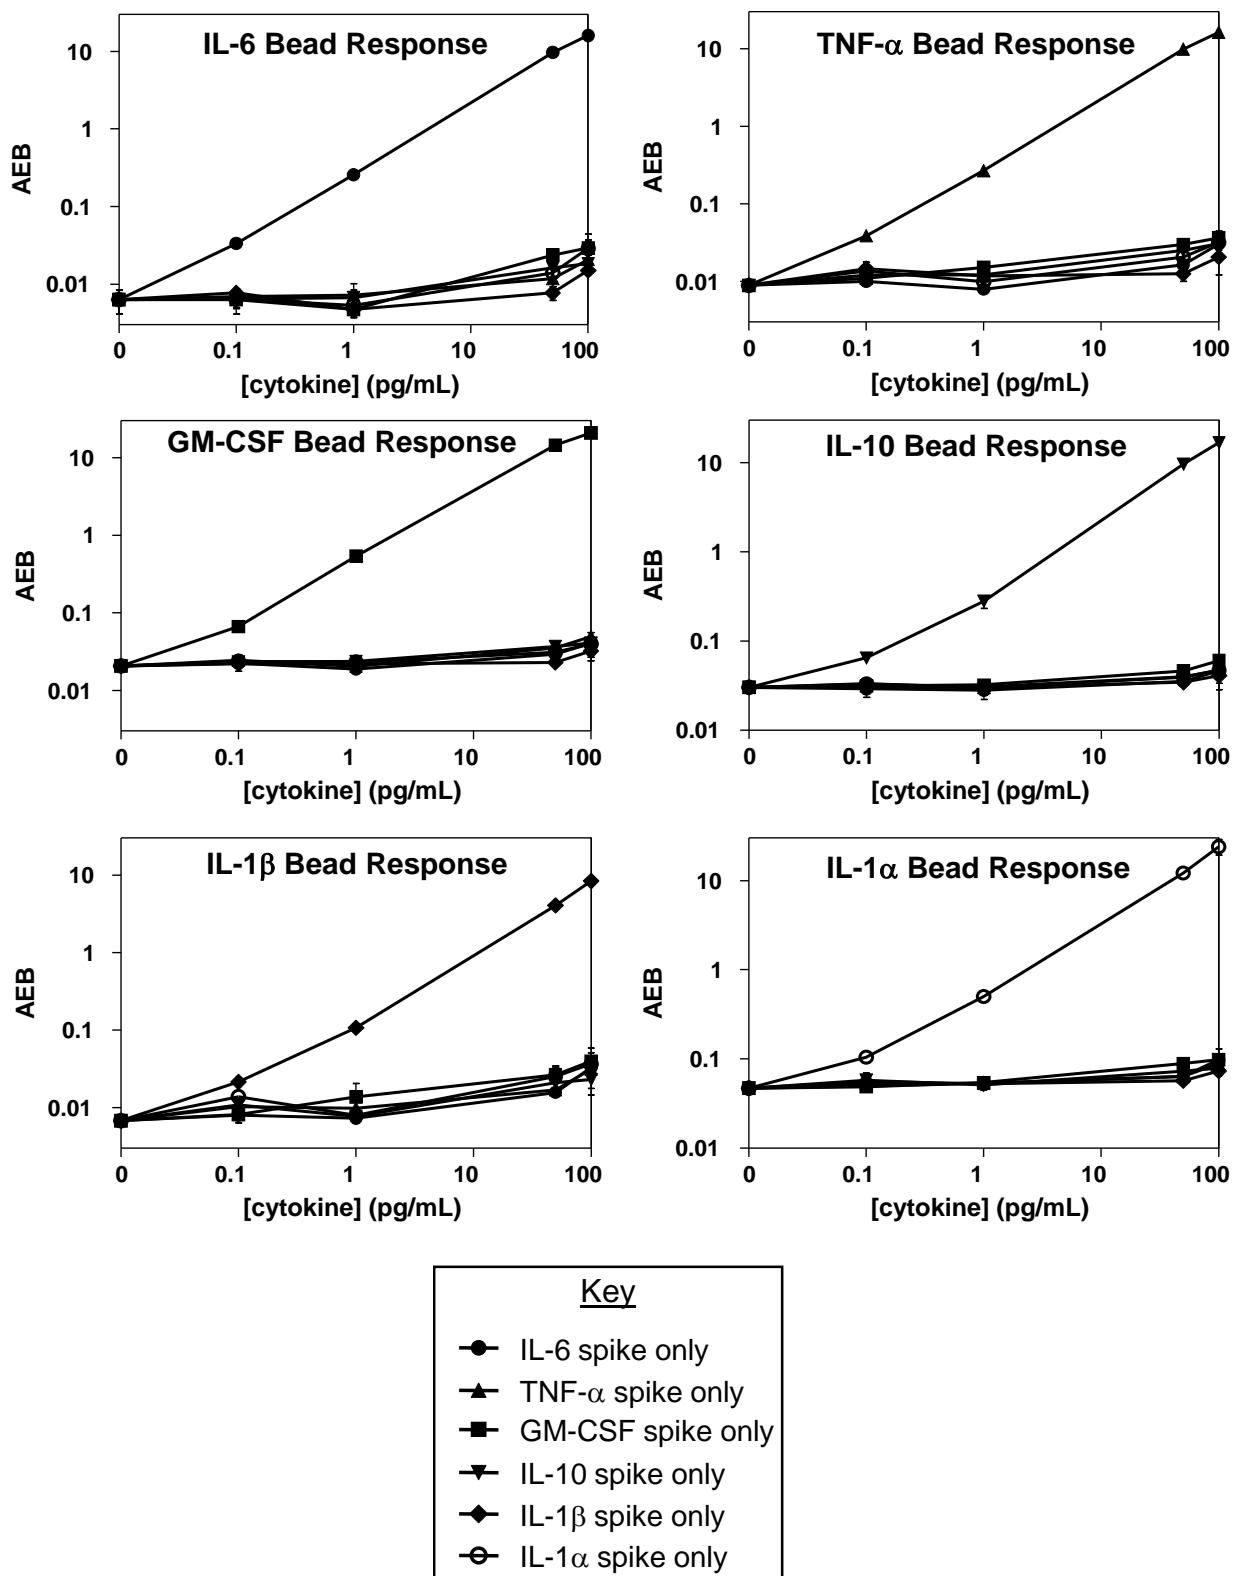

Figure S2. Plots of AEB against concentration of cytokine for six different specific bead types in a 6-plex Simoa assay. In these experiments, individual cytokines were separately spiked into bovine serum from 0 to 100 pg/mL to assess cross-reactivity.

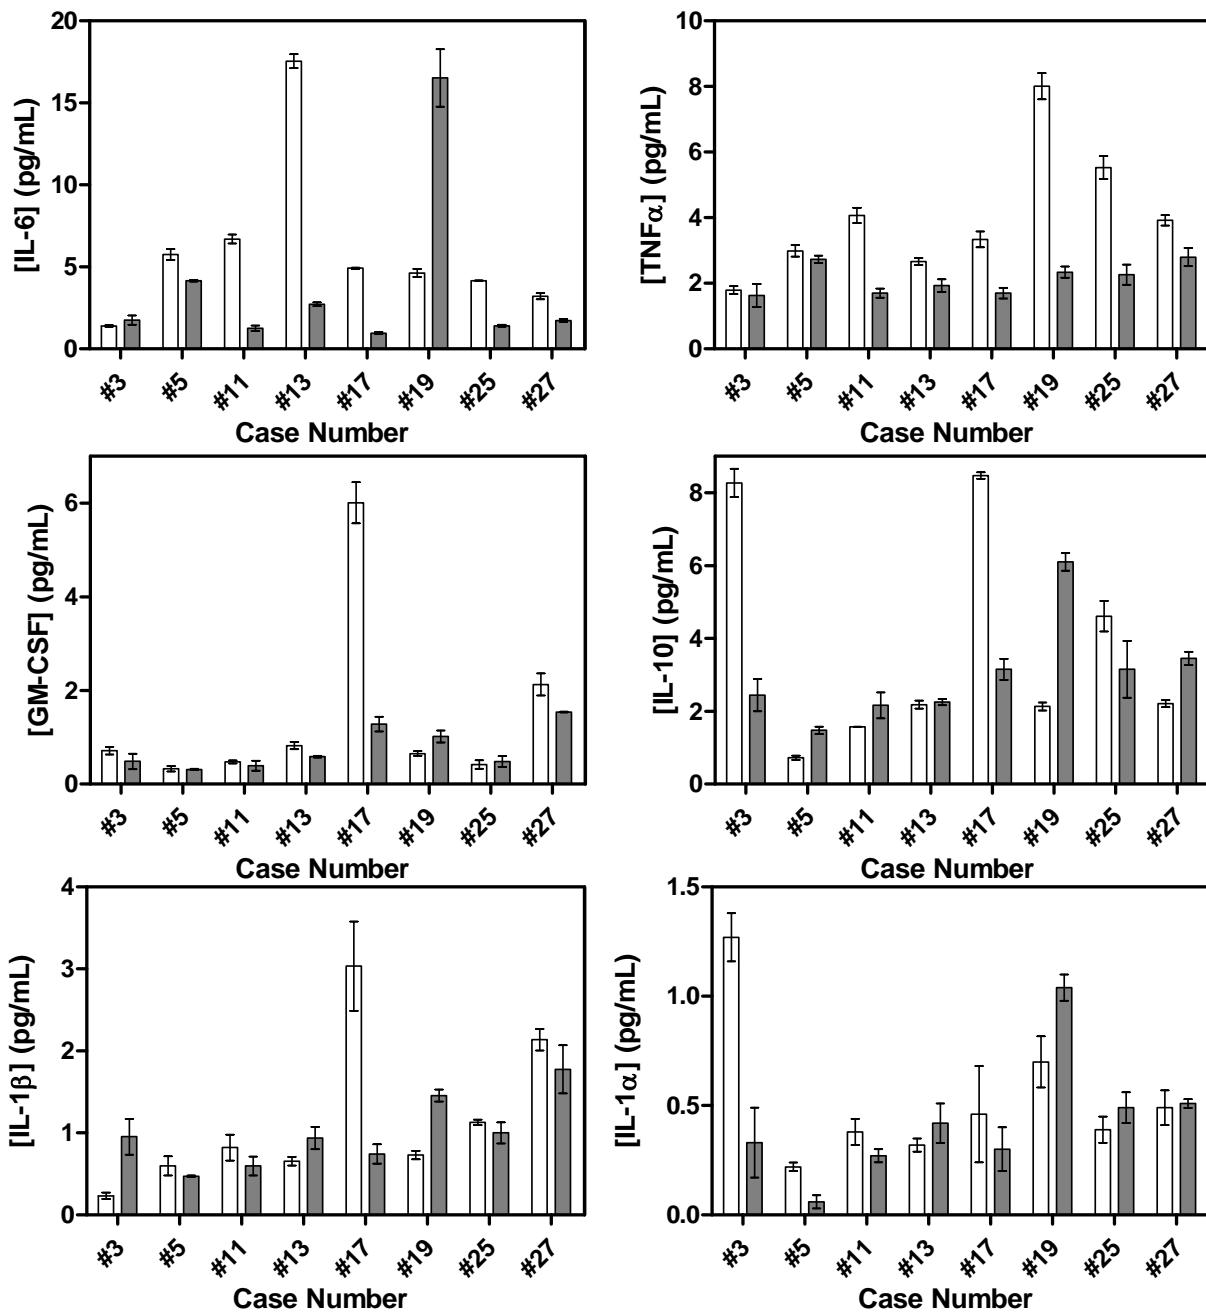

Figure S3. Plots of the concentrations of 6 cytokines in the plasma of eight CD patients before treatment with anti-TNF- α therapy (white bar) and 12 weeks after therapy was started (grey bar). Patients were anti-TNF- α naïve, except Case #19 who had previously been treated with infliximab. Error bars are based on one standard deviation of triplicate measurements.

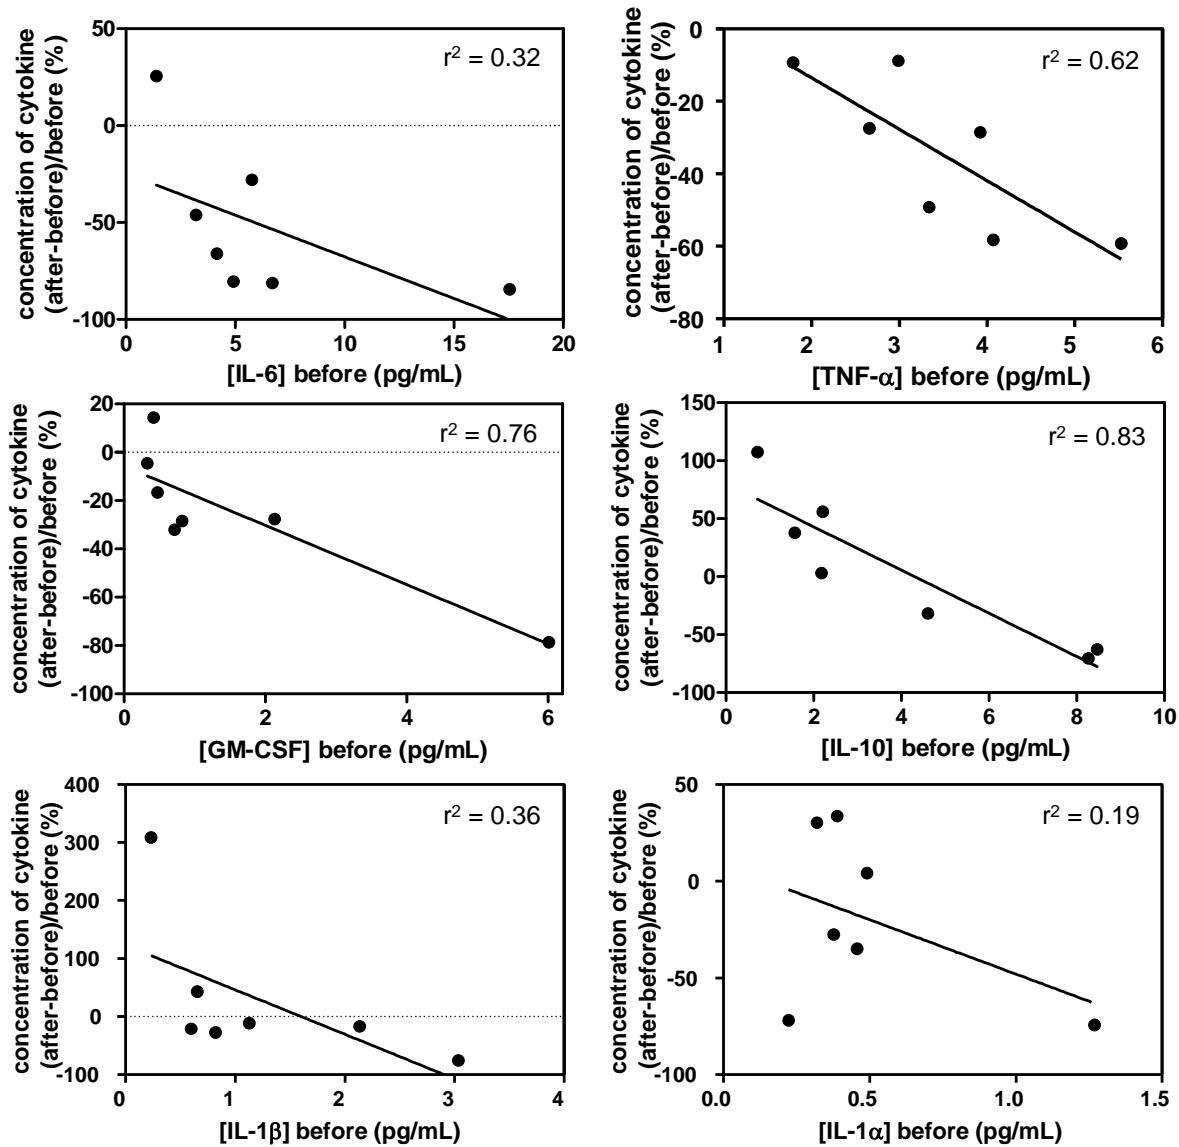

Figure S4. Plots determined using multiplex Simoa of the percentage change in concentration of 6 cytokines in the plasma of CD patients against the concentration of the cytokine before treatment with anti-TNF- α drug. The correlation of each data set is provided.

Table S1. AEB, standard deviations and CVs for 6 cytokines spiked into calibrator samples generated during the first of three runs using a 6-plex Simoa assay on the fully-automated system.

Mean % change	-52%	-55%	-34%	-43%	-25%	+6%	+29%	-20%
Mean conc. before (pg/mL)	6.2	7.3	3.5	3.2	1.6	4.0	1.2	0.50
Mean conc. after (pg/mL)	2.0	2.1	2.1	1.8	0.73	2.6	0.93	0.34

^a Case #19 was excluded from mean calculations for all cytokines as this patient had previously been treated with anti-TNF- α , contrary to the original study design. This patient did not respond to either drug, as described in ref. 7.

^b Data taken from ref.7. Case #1 was not retested in this study as sufficient volume of plasma was not available.

Table S9. Mean concentration (\pm SEM) of 6 cytokines in the serum of patients with Type 1 diabetes and healthy controls. Key: s = means are significantly different; ns = means are not significantly different

Cytokine	Type 1 diabetics (pg/mL)	Healthy Controls (pg/mL)	P value of <i>t</i> -test
IL-6	4.2 \pm 0.8	3.3 \pm 0.6	0.29; ns
TNF- α	5.9 \pm 1.4	2.0 \pm 0.1	0.001; s
GM-CSF	1.8 \pm 0.7	0.34 \pm 0.05	0.009; s
IL-10	12.6 \pm 2.4	4.8 \pm 1.4	0.007; s
IL-1 β	2.4 \pm 1.2	0.20 \pm 0.05	0.020; s
IL-1 α	3.0 \pm 1.6	0.72 \pm 0.30	0.075; ns
