Serum EphA2-NF and CA19-9 in the validation cohort of patients with PC (n = 472), intraductal papillary mucinous neoplasms (IPMNs) (n = 16), and pancreatic neuroendocrine tumors (PNETs) (n = 19). The cutoff value for EphA2-NF and CA19-9 was defined as 50.0 pg / ml and 100 U / ml, respectively, from the test cohort analysis.
