**Table S1** Severity of COVID-19 disease in accordance with the Chinese diagnosis and treatment protocol for COVID-19 infection (Version 10)

Severity of COVID-19	Characteristics
Mild type	individuals who exhibit various symptoms of the disease, but do not experience shortness of breath, dyspnea or abnormal chest imaging
Moderate type	individuals exhibiting persistent high fever lasting more than three days, shortness of breath accompanied by a respiratory rate below 30 breaths/min, resting oxygen saturation levels measured by pulse oximetry above 93%, or chest imaging revealing the characteristic manifestations of COVID-19 pneumonia
Severe type	individuals exhibiting respiratory distress, with a respiratory rate of $\geq 30$ breaths/min, resting finger oxygen saturation $\leq 93\%$ , arterial partial pressure of oxygen (PaO <sub>2</sub> )/fraction of inspired oxygen (FiO <sub>2</sub> ) $\leq 300$ mm Hg, or imaging indicating lesion progression $>50\%$ within 24-48 hours
Critical type	individuals who experience respiratory failure requiring mechanical ventilation, develop shock, or suffer from multiple organ failures necessitating treatment in the intensive care unit (ICU)

**Table S7** Baseline characteristics of study participants of the complete dataset with missing values removing according to oral antivirals (n=387)

Characteristic	Total (n = 387)	Nirmatrelvir-ritonavir (n = 241)	Azvdudine (n = 146)	P value <sup>a</sup>
Age, Mean ± SD, yr	76.69 ± 12.83	76.89 ± 13.45	76.36 ± 11.79	0.691
Sex, n (%)				0.200
Male	241 (62.27)	156 (64.73)	85 (58.22)	
Female	146 (37.73)	85 (35.27)	61 (41.78)	
BMI, Mean ± SD <sup>b</sup>	22.86 ± 3.18	22.89 ± 3.27	22.81 ± 3.04	0.812
Severity of COVID-19 before antivirals, n (%)				0.822
Mild-to-moderate	332 (85.79)	206 (85.48)	126 (86.30)	
Severe	55 (14.21)	35 (14.52)	20 (13.70)	
Smoking, n (%)	30 (7.75)	17 (7.05)	13 (8.90)	0.509
Drinking, n (%)	22 (5.68)	12 (4.98)	10 (6.85)	0.441
Diabetes, n (%)	101 (26.10)	58 (24.07)	43 (29.45)	0.242
Cardiovascular disease, n (%)	132 (34.11)	79 (32.78)	53 (36.30)	0.479
Chronic lung disease, n (%)	62 (16.02)	49 (20.33)	13 (8.90)	0.003
Tumor and immunosuppression, n (%)	102 (26.36)	79 (32.78)	23 (15.75)	< 0.001
LTM, Median (IQR), ×10 <sup>9</sup> /L	0.80 (0.50, 1.20)	0.80 (0.50, 1.10)	1.00 (0.70, 1.30)	< 0.001
D-dimer, Median (IQR), mg/L	0.92 (0.52, 1.89)	0.96 (0.55, 2.05)	0.87 (0.49, 1.56)	0.090
CRP, Median (IQR), mg/L	29.00 (9.04, 68.60)	37.60 (12.50, 77.30)	19.60 (5.12, 52.70)	< 0.001

Abbreviation: IQR, interquartile range; LTM, lymphocyte count; CRP, C-reactive protein; BMI, body mass index.

<sup>a</sup> P value was based on Student's t-test, Mann-Whitney U test,  $\chi^2$  tests, or Fisher's exact, as appropriate.

<sup>b</sup> BMI was calculated as weight in kilograms divided by height in meters squared.

**Table S8** Associations between antivirals use and the efficacy outcomes in regression analysis for complete cohort (n=387)

Outcomes <sup>a</sup>	Nirmatrelvir-ritonavir (n =241)	Azvudine (n = 146)	Crude		Model 1 <sup>b</sup>		Model 2 <sup>c</sup>		Model 3 <sup>d</sup>	
			HR 95%CI or $\beta$ 95%CI	P value	HR 95%CI or $\beta$ 95%CI	P value	HR 95%CI or $\beta$ 95%CI	P value	HR 95%CI or $\beta$ 95%CI	P value
All-cause 28-day mortality, n (%)	9 (3.73)	8 (5.48)	1.46 (0.56~3.77)	0.440	1.55 (0.59~4.05)	0.376	1.56 (0.58~4.17)	0.379	1.77 (0.61~5.13)	0.294
Risk of 28-day progressing to critical condition, n (%)	12 (4.98)	12 (8.22)	1.66 (0.75~3.70)	0.213	1.87 (0.83~4.20)	0.131	1.98 (0.86~4.53)	0.106	2.31 (0.97~5.51)	0.058
Proportion of 28-day negative conversion of nucleic acid, n (%)	198 (82.16)	124 (84.93)	0.88 (0.70~1.10)	0.248	0.88 (0.70~1.10)	0.247	0.81 (0.64~1.02)	0.070	0.81 (0.64~1.02)	0.072
The first nucleic acid negative conversion time, Median (IQR), days <sup>e</sup>	14.00 (10.00, 20.25)	16.00 (12.00, 21.00)	2.08 (0.35~3.82)	0.019	2.20 (0.45~3.94)	0.014	2.59 (0.80~4.39)	0.005	2.60 (0.78~4.42)	0.005
Hospital length of stay, Median (IQR), days <sup>f</sup>	13.00 (9.00, 23.00)	15.00 (10.00, 20.00)	-1.43 (-3.35~0.48)	0.143	-1.24 (-3.12~0.65)	0.201	-0.85 (-2.81~1.11)	0.396	-0.95 (-2.93~1.04)	0.350

Abbreviation: HR, hazard ratio; IQR, interquartile range

<sup>a</sup>was measured by azvudine vs nirmatrelvir-ritonavir

<sup>b</sup>Model 1 was adjusted for age, sex, BMI, and severity of COVID-19 before antivirals.

<sup>c</sup>Model 2 was adjusted as model 1 plus diabetes, cardiovascular diseases, chronic lung disease, and tumor and immunosuppression.

<sup>d</sup>Model 3 was adjusted as model 2 plus LTM, D-dimer, and CRP.

<sup>e</sup> patients who died or lost before the nucleic acid turned negative were further excluded

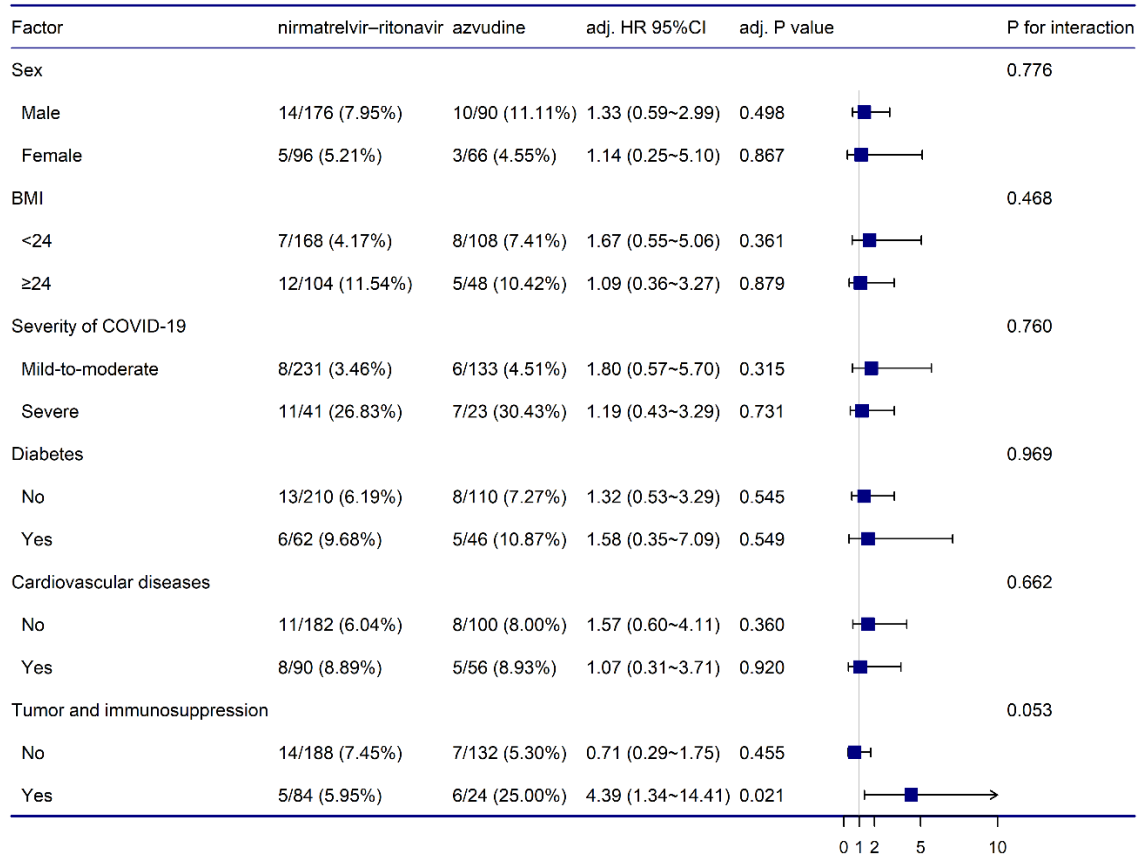

<sup>f</sup> patients who died during hospitalization were further excluded

**Fig. S1** Forest plot for subgroup analyses of the efficacy of azvudine versus nirmatrelvir-ritonavir on all-cause 28-day mortality in patients with COVID-19 for main cohort

Hazard ratios are plotted as squares, the horizontal lines represent 95% confidence intervals.

**Fig. S2** Forest plot for subgroup analyses of the efficacy of azvudine versus nirmatrelvir-ritonavir on risk of progressing to critical condition within 28 days in patients with COVID-19 for main cohort

Hazard ratios are plotted as squares, the horizontal lines represent 95% confidence intervals.

**Fig. S3** Forest plot for subgroup analyses of the efficacy of azvudine versus nirmatrelvir-ritonavir on proportion of 28-day negative conversion of nucleic acid in patients with COVID-19 infection for main cohort

Hazard ratios are plotted as squares, the horizontal lines represent 95% confidence intervals.

**Fig. S4** Forest plot for subgroup analyses of the efficacy of azvudine versus nirmatrelvir-ritonavir on the first nucleic acid negative conversion time in patients with COVID-19 infection for main cohort

Estimated  $\beta$  is plotted as squares, the horizontal lines represent 95% confidence intervals.

**Fig. S5** Forest plot for subgroup analyses of the efficacy of azvudine versus nirmatrelvir-ritonavir on the hospital length of stay in patients with COVID-19 for main cohort

Estimated  $\beta$  is plotted as squares, the horizontal lines represent 95% confidence intervals.
