

Supplementary Figure 16: Flow cytometry data from infection of $2E+4$ vg/cell of AAV2 containing +ZF-FKBP_GFP and varying concentrations of CEM87 into HEK293T cells. Gating example is for a single biological replicate of HCT116 cells infected with AAV2 +ZF-FKBP_GFP and treated with 500 nM of CEM87. A. FSC and SSC gating for live cells, B. SCC gating for single cells, and C. BL1 laser gating detecting GFP positive cells.
