Supplemental Material

Exposure to Perfluoroalkyl Substances and Associations with Pubertal Onset and Serum Reproductive Hormones in a Longitudinal Study of Young Girls in Greater Cincinnati and the San Francisco Bay Area

Susan M. Pinney, Cecily S. Fassler, Gayle C. Windham, Robert L. Herrick, Changchun Xie, Lawrence H. Kushi, and Frank M. Biro

Table of Contents

Figure S1. Number of study subjects.

Table S1. Inclusion Criteria.

Table S2. Characteristics of the girls in the puberty cohort not in this analysis and in the analysis.

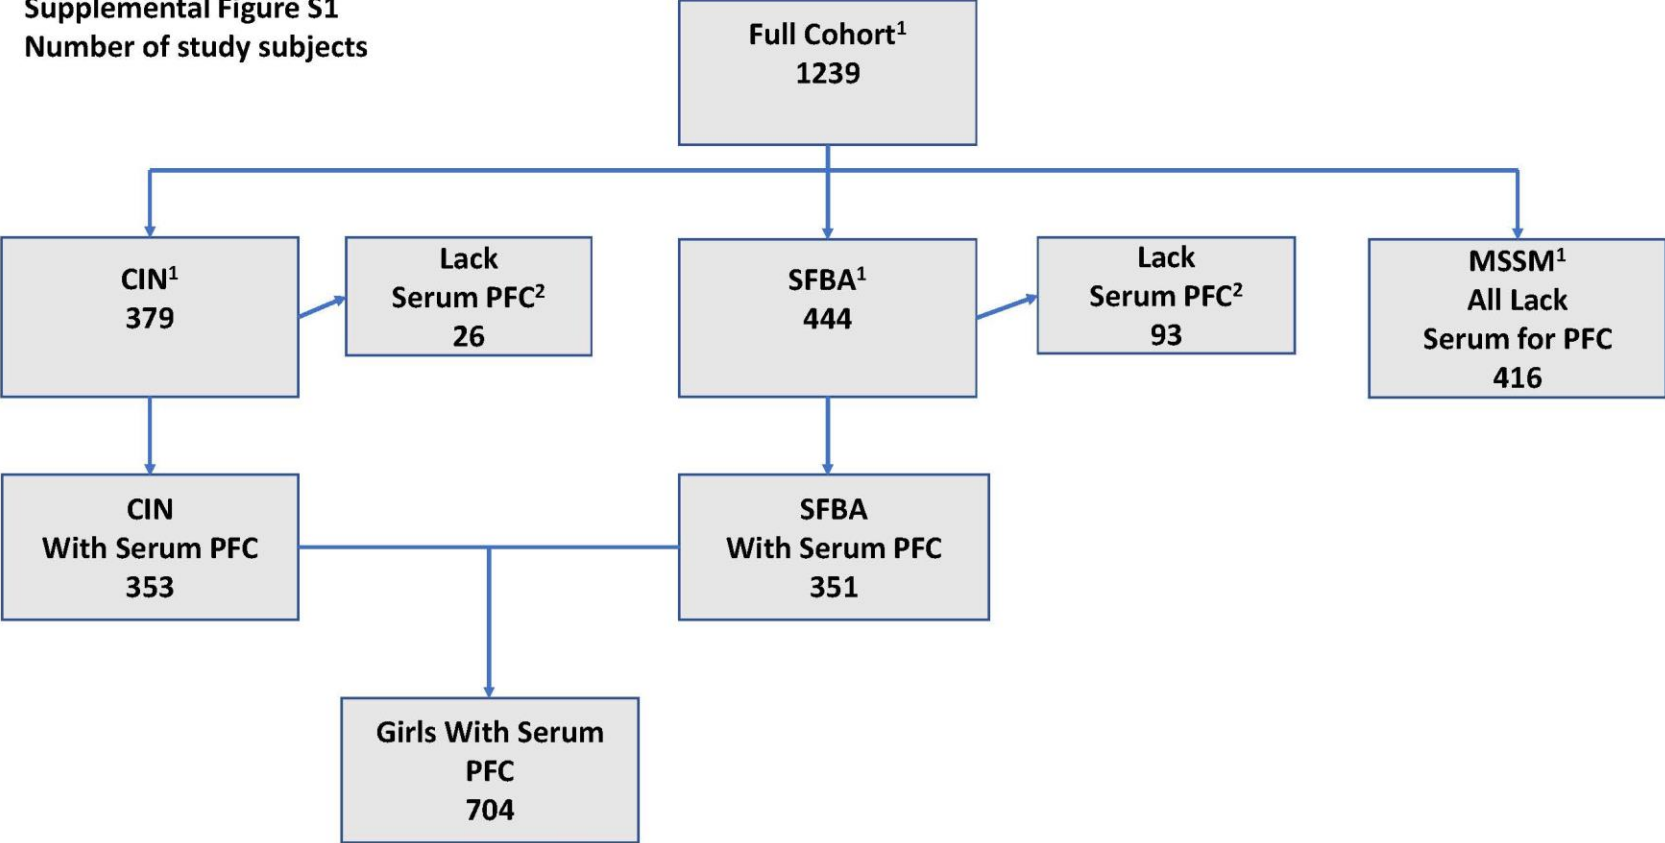

Table S3. Pearson correlation coefficients of PFCs biomarkers levels with each other.

Table S4. Cox regression models of effects of PFOA serum concentration on time to pubertal event stratified by median BMI% for the girls in the study population.

Table S5. Logistic regression model of the effect of PFOA on the odds of entering pubarche prior to thelarche for the girls in the study.

Table S6. Regression model of effects of PFOA serum concentrations on hormones stratified by median BMI% for the Cincinnati girls (n=304).

Supplemental Figure S1
Number of study subjects

Supplemental Table S1. Inclusion Criteria

Analysis of longitudinal association of PFOA with pubertal milestones N=704

Inclusion criteria	
	SFBA – enrolled in clinics of the Kaiser Permanente system at San Francisco Bay area since birth and at time of study recruitment
	GC – enrolled in selected public and parochial schools in Greater Cincinnati area or had a mother or grandmother in the Breast Cancer Registry of Greater Cincinnati
	Six to eight years old (calendar year, for example from 6.0 to 8.0) at time of study enrollment

Analysis of circulating sex hormones around the time of thelarche N=304

Inclusion criteria	
	Participant in the main study
	Serum samples for hormone analyses (Cincinnati site only)
	At least one of four hormone measurements from at least one of four time points (6 months prior to thelarche, thelarche, 6 months after thelarche, 12 months after thelarche)

Supplemental Table S2. Characteristics of the girls in the puberty cohort not in this analysis and in the analysis

	Both Sites Combined Not Included(n=119)	Both Sites Combined Included (n=704)	p-value ^c
Median BMI% at baseline ^a	65.73	66.39	0.9120
Mean ^b Age of Thelarche (months)	107.50±17.12	111.58 ± 14.57	0.0536
Mean ^b Age of Pubarche (months)	111.07±20.22	118.63 ± 17.19	0.0012
Mean ^b Age of Menarche (months)	144.45±20.31	147.99 ± 14.48	0.3747
Race/Ethnicity, n (%)			0.1140
White	56 (47.06%)	364 (51.70%)	
Asian	11 (9.24%)	46 (6.53%)	
Hispanic	25 (21.01%)	98 (13.92%)	
Black	27 (22.69%)	196 (27.84%)	

^aBMI% from CDC 2000 Female BMI-for-age table; height and weight at closest visit prior to pubertal event

^bMean ±standard deviation

^cTest of significance of difference in values for “Both Sites Combined Not Included ” for those without PFAS measurements who were not included in the analysis (N=119) to those in the analysis, Both Sites Combined Included (N=704, Table 1); Fisher exact test for categorical variables and Kruskal-Wallis for continuous variables.

BMI=body mass index

Supplemental Table S3: Pearson correlation coefficients^a of PFCs biomarkers levels with each other
