

Supplement Fig. 3. Localization of NORD-1 in the penis and kidney. Representative image of penis (upper) and kidney (lower) 1 hour after NORD-1 (100 μL, 10^{-4} M) injection into the crura of the penis. NORD-1 fluorescence was detected by approximately 620 nm excitation light. White bar in each image represents scale bar (penis: 200 μm, kidney: 1 mm).
