

Exploring programmatic indicators of tuberculosis control that incorporate routine *Mycobacterium tuberculosis* sequencing in low incidence settings: a comprehensive (2017 to 2021) patient cohort analysis

Supplementary Figures

Content	Page
Figure S1: Flowchart of TB cases included in the study	1
Figure S2: Frequency of mutations detected in the <i>pncA</i> gene and association with phenotypic pyrazinamide resistance	2
Figure S3: Frequency of mutations detected in the <i>embB</i> gene and association with phenotypic ethambutol resistance	3
Figure S4: <i>M. tuberculosis</i> transmission clusters identified* over the 5-year study period – using a 0 SNP cut-off	4
Figure S5: <i>M. tuberculosis</i> transmission clusters identified* over the 5-year study period – using a 12 SNP cut-off	5
Figure S6: The proportion of TB isolates within identified clusters using a 0-SNP, 2- SNP, and 5-SNP cut-offs over a rolling 2-year clustering review	6
