

**Figure S3. Diagnostic images of the PPBC from case #15 right breast. (A, B)** mediolateral oblique projection of a mammogram of the right breast with an irregular and infracentimetric microlobulated nodule in the prepectoral region. **(C-D)** Magnetic resonance imaging of the breast with dynamic study in the axial and sagittal plane **(C and E)**, showing a hypointense nodule, with a rounded morphology, spiculated and infracentimetric margins in morphological sequences **(T1, panel D)** with early uptake type mass, suspicious for malignancy.
