

Supplemental Figure 3. Gestational age associated protein changes are consistent with previous study. Venn diagram (A) showing the overlap of amniotic fluid proteins associated with gestational age in human samples from this study with proteins associated with gestational age in a study by **Bhatti et al.**¹⁸. **The scatterplot (B) shows the correlation of effect size in this study on the y-axis (in units of change per day of gestation) with the effect size in the Bhatti et al. study (units reflect change from mid-gestation to term).**
