

Supplementary File 4. Comparison of IF-FLCK and CSF white cell count. (A) Group-specific CSF white cell counts. **(B)** Group specific IF-FLCK, IF-FLCK (Qmean). **(C)** Receiver operating characteristics for IF-FLCK > Qlim (blue line, AUC = 0.809, $p = 0.001$) and CSF white cell count (orange line, AUC = 0.852, $p = 0.0002$) as to the differentiation of inflammatory (AIE⁺, AIE⁻, INE) vs non-inflammatory (DGE) encephalopathy and NIND. (* $p \leq 0.05$, ** $p \leq 0.01$, *** $p \leq 0.001$, **** $p \leq 0.0001$).
