

**Figure S3.** Dendrogram calculated from the Mass Spectra Profiles (MSP) of the 27 isolates used to construct the MALDI-TOF MS database. The dendrogram was constructed with the MALDI BioTyper compass explorer v4.1, with the distance set to 'Euclidean' and the linkage set to 'complete'. Isolates from clade B are shown with branches in blue, except for the divergent isolate EFM-S-06 in black. Isolates from the A1/A2 clade are shown with branches in red.
