

Anatomy Segmentation in Laparoscopic Surgery: Comparison of Machine Learning and Human Expertise – An Experimental Study

Supplementary Material

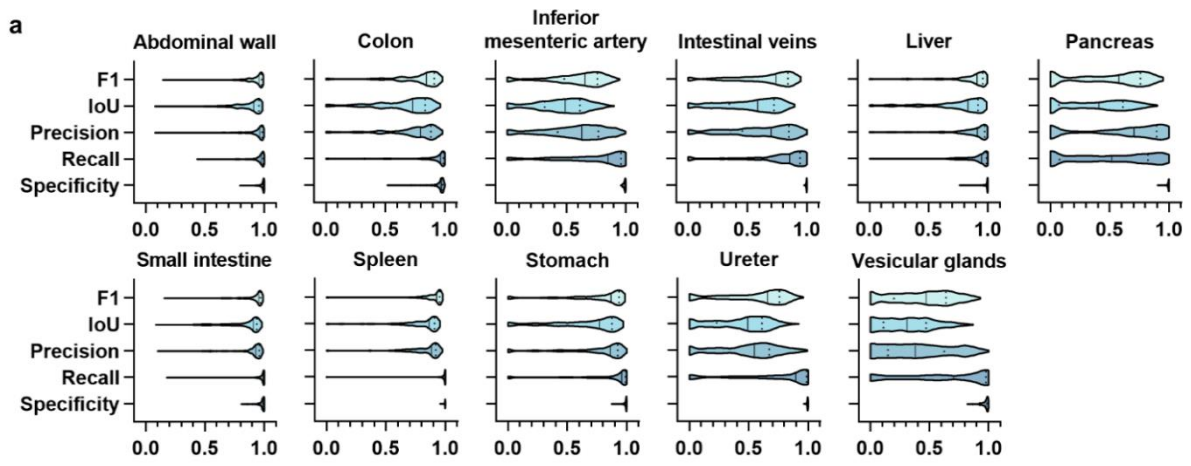

Table of Contents

Supplementary Figure 1: Intersection-over-Union (IoU)	2
Supplementary Figure 2: Pixel-wise organ segmentation with SegFormer-based structure-specific models trained on the respective organ subsets of the Dresden Surgical Anatomy Dataset	3
Supplementary Figure 3: Pixel-wise organ segmentation with SegFormer-based combined model trained on the Dresden Surgical Anatomy Dataset across anatomical structure classes with a common encoder and structure-specific decoders	5
Supplementary Table 1: Summary of performance metrics for anatomical structure segmentation using structure-specific models.....	7
Supplementary Table 2: Summary of performance metrics for anatomical structure segmentation using combined models (common encoder with structure-specific decoders).....	8

 Ground truth  Prediction

Supplementary Figure 1: Intersection-over-Union (IoU). Schematic illustration of calculation of IoU and examples of poor, good, and excellent IoU in segmentation tasks.

Supplementary Figure 2: Pixel-wise organ segmentation with SegFormer-based structure-specific models trained on the respective organ subsets of the Dresden Surgical Anatomy Dataset. (a) Violin plot illustrations of performance metrics for SegFormer-based structure-specific segmentation models on the test dataset. The median and quartiles are illustrated as solid and dashed lines, respectively. **(b)** Example images from the test dataset with the highest IoUs for liver, pancreas, stomach, and ureter segmentation with SegFormer-based structure-specific segmentation models. Ground truth is displayed as blue line (upper panel), model segmentations are displayed as white overlay (lower panel). **(c)** Example images from the test dataset with the lowest IoUs for liver, pancreas, stomach, and ureter segmentation with SegFormer-based structure-specific segmentation models. Ground truth is displayed as blue line (upper panel), model segmentations are displayed as white overlay (lower panel).

Supplementary Figure 3: Pixel-wise organ segmentation with SegFormer-based combined model trained on the Dresden Surgical Anatomy Dataset across anatomical structure classes with a common encoder and structure-specific decoders. (a) Violin plot illustrations of performance metrics for the SegFormer-based combined segmentation model on the test dataset. The median and quartiles are illustrated as solid and dashed lines, respectively. **(b)** Example images from the test dataset with the highest IoUs for liver, pancreas, stomach, and ureter segmentation with the SegFormer-based combined segmentation model. Ground truth is displayed as blue line (upper panel), model segmentations are displayed as white overlay (lower panel). **(c)** Example images from the test dataset with the lowest IoUs for liver, pancreas, stomach, and ureter segmentation with the SegFormer-based combined segmentation model. Ground truth is displayed as blue line (upper panel), model segmentations are displayed as white overlay (lower panel).

Supplementary Table 1: Summary of performance metrics for anatomical structure segmentation using structure-specific models. Models were based on DeepLabv3 (a: training dataset, b: validation dataset) as well as SegFormer-based architectures (c: training dataset, d: validation dataset). For each metric, mean and standard deviation are displayed.
