Supplementary Figure 3. Distribution of individual clearance (CL) of irinotecan (left) and its active metabolite (SN-38, right). Boxplots show the median (solid line at center of box) and its approximate 95% confidence interval (shaded area), the inter-quartile range (box), 1.5× interquartile range (whiskers) and outliers (solid circles). The red symbols show the clearance values of the two patients in the concomitant dosing cohort of the expansion phase.
