Sections 4 to 7 describes TMAT delivery from three perspectives.

Section 4 describes a set up process and considerations around TMAT delivery in an existing healthcare workflow.

Section 5 discusses the ethical and legal principles to be considered in TMAT delivery.

Section 6 discusses the actual TMAT consultation.

Section 7 provided by our colleagues Roz Gittins & Claire Morrison takes us through some of the pharmacy considerations when delivering TMAT.

Section 8 briefly identifies a few examples of evaluation tools for your intervention.

We use tables and diagrams extensively to make this guide more easily adapted to local needs and to make information more readily available when required.

standards themselves which have been reported elsewhere (Johns et al., 2020). Figure 1. maps out the relationship between the MAT standards and the various aspects of TMAT delivery. The knowledge and literature around the implementation of specific healthcare interventions are not always readily accessible in the public domain. Specifically, when it comes to technology based interventions, or interventions in response to crises, the published literature becomes rapidly outdated (Mohr et al., 2015). We have therefore taken the Digital Design for Addiction Services (Colley & Marttila, 2017, pg 295-8) approach which is described in more detail below.
