Supplementary Figure 1 – Flow Cytometry Gating Strategy for Neutralisation Assay

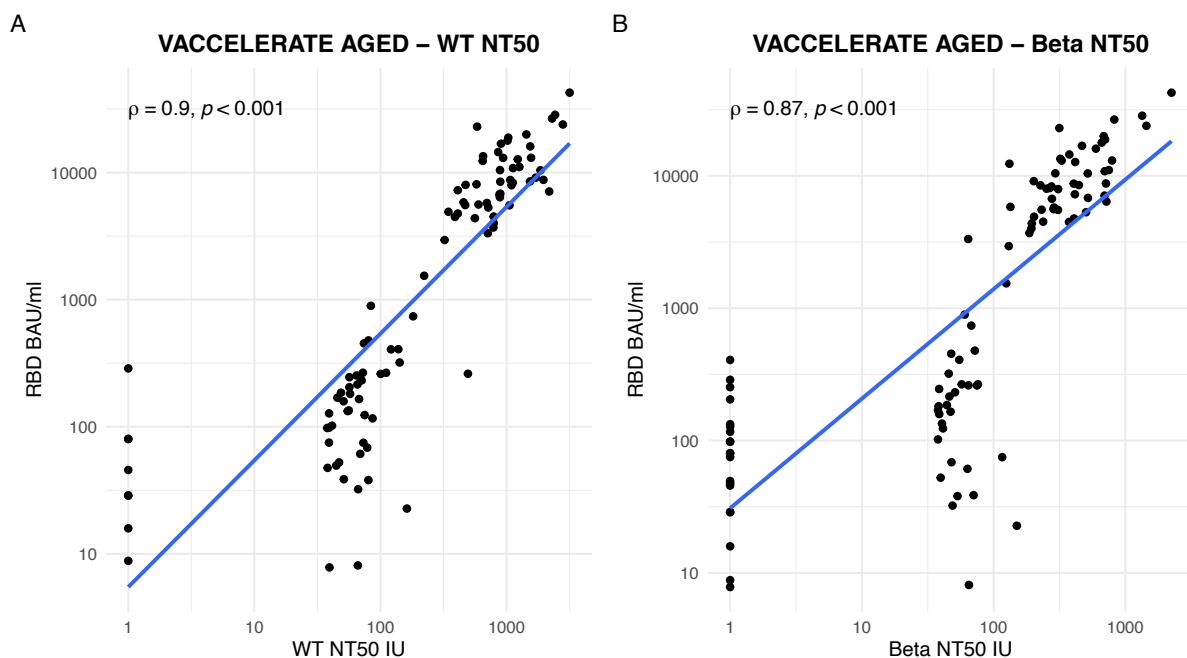

Cells were gated against Forward (FSC) and Side-Scatter (SSC) to exclude debris from intact cells, then single cells were gated based on linearity between Area (A) and Height (H). Infected cells (NP+) were gated against the negative controls (Infection Medium alone). Analysis was performed using CytExpert software (version 2.4.0.28, Beckman Coulter).

Supplementary Figure 2 – Gating Strategy for SARS-CoV-2 specific T cell response

Representative flow cytometry gating strategy for detection of IFN γ + and TNF α + responses in CD4+ and CD8+ T cells, and PD-1+ and CD69+ TNF α + CD8+ T cells. Basal represents the unstimulated control.
