

FAAH inhibition ameliorates breast cancer in a murine model

SUPPLEMENTARY MATERIALS

A Cell Viability with Endocannabinoid, AEA

B Cell Viability with Endocannabinoid, PEA

Supplementary Figure 1: Impact of exogenous cannabinoids on breast cancer viability. Cell viability assays were also conducted with exogenous cannabinoids, AEA (A) and PEA (B), using a vehicle control and AEA/PEA treatments at the following concentrations: 10 µM, 20 µM, and 30 µM. Statistical significance was determined using a non-parametric Mann-Whitney *U*-test ($p < 0.05$).
