

Figure S1

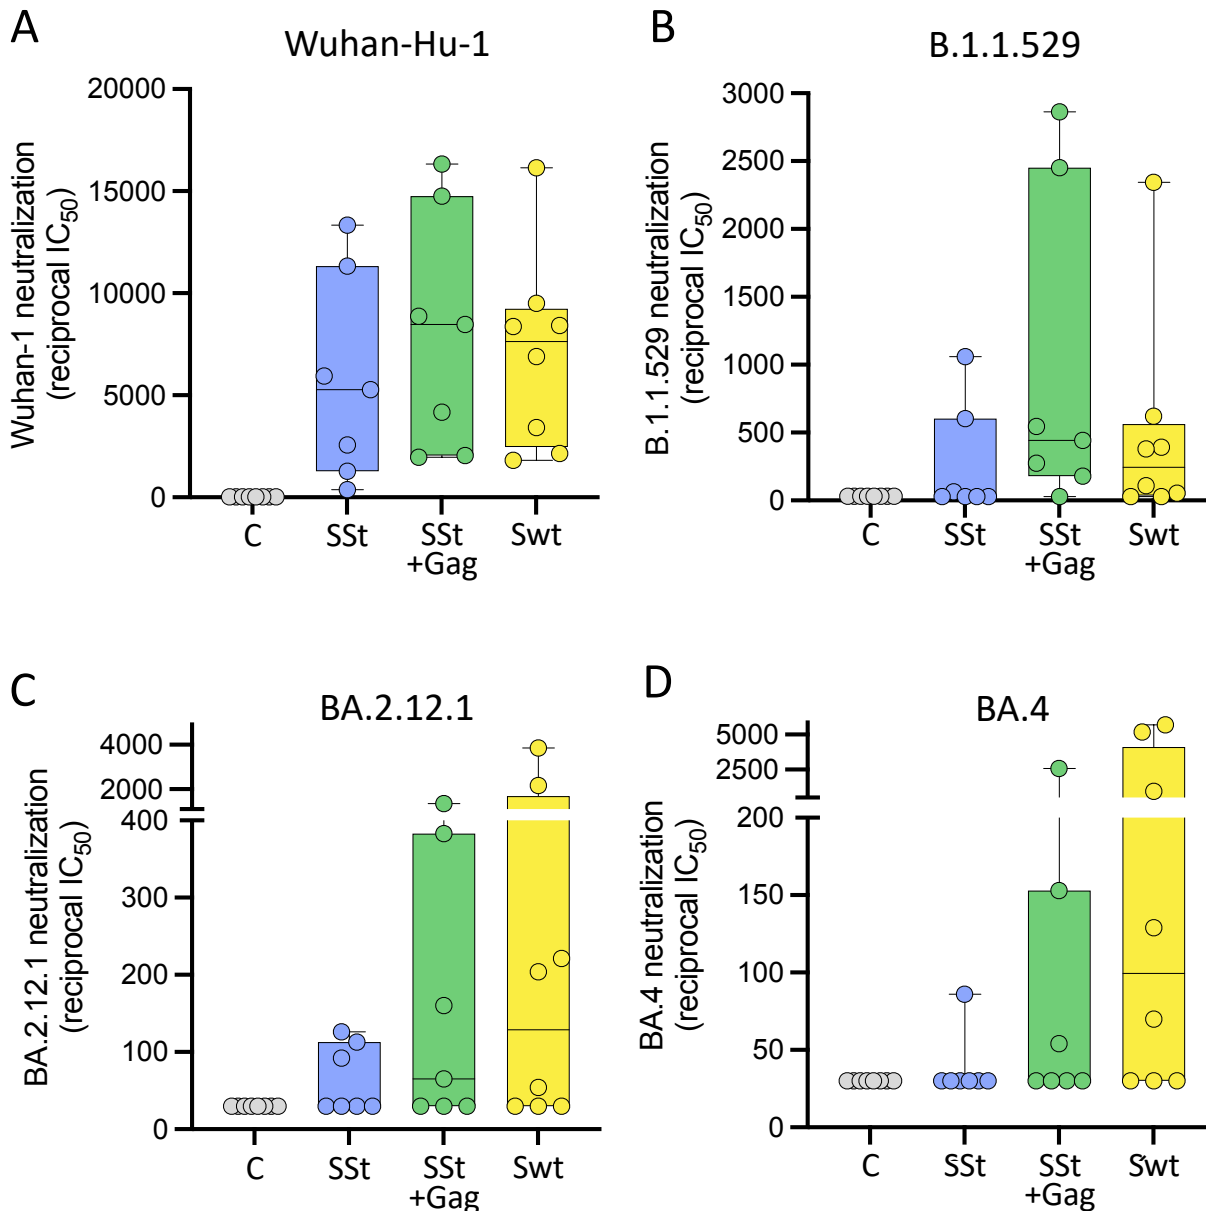

Figure S1. Neutralization of autologous and heterologous SARS-CoV-2 strains in mice immunized with the vaccines indicated below the x axis at study termination (day 330). (A) Autologous virus (Wuhan-Hu-1). (B) Omicron variant (B.1.1.529). (C) Omicron subvariant BA.2.12.1. (D) Omicron subvariant BA.4. The median titer is indicated by a horizontal line in each box. No statistical differences were seen by either parametric or non-parametric *t*-tests presumably due to the wide data dispersion.
