

SUPPLEMENTARY FIGURE 8. Crosslinking of anti-CD27 and dtCD70-Fc by Fc γ RIIB promotes their activity. NF κ B-GFP/mouse CD27⁺ Jurkat reporter cells were stimulated with indicated proteins without (cells only) or in the presence of CHO-K1 cells that express mouse Fc γ RIIB for 6 hrs at 37 °C before being analysed for GFP expression by flow cytometry. Data shown are the mean +/- SD.
